"WHAT THEY SAY."—"YESTERLAID EGG Ranch, Kent, Wash. Dear Sir:—Is there any chance for 1200 chicks the 1st of April? Well pleased with your pullets last year. They laid between 50 per cent and 60 per cent since last October." Jack Sheridan, Greenacres, Wash. "Dear Sir: I bought 400 chicks of you last spring and will say they were the best layers I have. I would like to buy between 400 and 500 more next month. What time in February could I get them?" Mrs. Leonard Fossett, Dungeness, Wash. "Jan. 6th, 1922. Dear Sir: Enclosed find $7.50 as 15 per cent payment on 250 chicks. Our neighbor, Mr. Wood, got some from you last year and they certainly are good layers." William Stark, Coeur d'Alene, Idaho. We hatch 12,000 chicks every 45 days from our own wonderful trap nested White Leghorns. All of our 8000 laying hens are trap nested and bred to lay. We have 40 acres devoted exclusively to White Leghorns, all with wonderful egg records. More than 50,000 chicks already sold, but we still have good dates left if you book your orders at once. Send for price list and dates you would like chicks shipped. Yesterlaid Egg Ranch, Kent, Wash.

WHITE LEGHORN AND ILL-A-HEE BARRED Rock chicks—Buy chicks this year that live and grow and are bred to lay. Butler White Leghorns and Ill-a-hee Barred Rocks are known for high average flock production. Before ordering elsewhere, write for circular telling how our breeding methods produce 200 flocks for our customers. All stock trap nested and pedigreed. Also get our prices on breeding cockerels and hatching eggs for each breed. Address Butler Poultry Farms, or Ill-a-hee Poultry Farm, Jennings Lodge, Ore.

HUSKY, VIGOROUS WHITE LEGHORN BABY chicks from genuine Yesterlaid Egg Ranch of Kent, Wash., stock. I can fill any size order, large or small, full count and safe arrival guaranteed. Place your order now, today. Orders are coming in fast. I ship every Wednesday. I give full directions for the care of baby chicks with each order, if requested, written by a noted expert. Write for shipping dates, prices, etc., at once. Small deposit required with order. T. E. Schreiner, Kent, Wash.

"FRESHLAID" WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for the heaviest egg production; every "Freshlaid" male is from a high record hen. Freshlaid Farms is one of largest and oldest chick plants in the Inland Empire. There is a real demand for "Freshlaid" chicks, especially from our old customers. We are sold out until May 1. Write at once if you wish May chicks. May chicks make ideal winter layers. Catalog. Freshlaid Farm, Colfax, Wash.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

360 ACRES, PART IRRIGATED; UNENCUMbered; with stock and machinery; trade for smaller place. Tom Black, Leahy, Wash.

WOULD TRADE $1300 EQUITY HALF SECtion, unimproved, for improved small tract on west coast. Paul E. Green, Downs, Wash.

TRACK'S END

By HAYDEN CARRUTH

A Stirring Story of Adventure

(Copyright by Harper & Bros.)

CHAPTER XVIII.

After the fight: also a true account of the great blizzard: with how I go to sleep in the stronghold and am awakened before morning.

So that is the true history of the fight, just as it all happened at Track's End, Territory of Dakota, on Saturday, February 5, and thus, through good luck and being well intrenched behind my fortifications, and having plenty of Winchesters, I beat off the cutthroat outlaws and held the town. If they had waited one day longer for their coming they would have waited a good while longer, for the next day there came such a blizzard as I had never seen before nor since, which roared without ceasing six days, lacking 12 hours, and for two weeks more the weather stayed bad, and seemed to have relapses, as they say of a person sick. No robbers could have come through it, but the ones that had come got back to their headquarters through the first of it, as I have good reason to know.

And for almost six weeks after the fight I lived regularly and without much disturbance, with Kaiser and the other animals for company by day and the howling of the wolves and my own thoughts by night. If the thoughts had given me no more trouble than the wolves I should have been happy, for I think I had got so that I could not sleep unless there was a wolf howling somewhere about in the neighborhood. The loneliness, the dread of the outlaws coming back, the mystery of what or who was in or near the wretched town besides myself, all kept with me and made me wish ten thousand times that I had never heard of the place, or of any place except home.

Though, of course, I did not keep so miserable all the while. There was plenty of work to be done, and I kept at it most of the time. My eye soon got well. The day after I beat off the outlaws and had a little recovered from the work and strain of that and of the strange start the disappearance of the saddle gave me, I found so many things waiting to be done that I scarce knew what to turn my hand to first. But I had thought the poor pony in the tunnel deserved to be got out before anything else was done, and this I attended to an hour after the robbers had gone. I went out half expecting to find it gone, too, with its saddle, but it was not.

It was quite tired out and stood hangings its head. To get it out the way it had tumbled in would take a great amount of shoveling in the hard snow, I soon saw, so I decided I would try to lead it through the tunnel and on out by way of the hotel, though it seemed an odd thing to do. So I put a halter on it and tried that plan, and though its back scraped a little in places, what with me ahead and with Kaiser behind barking a good deal, we got it along and into the office and then on through the storeroom and kitchen and out to the barn. Dick and Ned were much excited by the new arrival, and so for that matter was Blossom, and Crazy Jane was like to have cackled her head off. The poor things were the same as I, half dead from lonesomeness.

Then I straightened up things about town which had been put out of order by the fight, fixed the fires again and cleaned up the guns. I didn't forget to go up the windmill tower several times to have a look for the outlaws, but I saw no more of them. Another thing I did was to lay some big slabs of frozen snow over the hole in the tunnel where the pony fell through, and it was a good thing I did this or I believe the blizzard would have gone near to filling the whole tunnel system. As it was it piled on more snow and covered all trace of the robbers' charge on the street.

I think it would not be possible for me to make you understand what a blizzard that was, which began the next day and kept up for the best part of a whole week. All day and night it roared and pushed at the windows and drove the snow in every crack and hole; here it piled up and there swept it away clean down to the ground. Not once did I go out beynd the tunnels. The fire at the depot I let go out, and the others I kept up more to have something to do than for any use they were, because I knew no outlaws could ever come in such a storm.

While the blizzard lasted I had a hard time to find enough to do to keep my mind off of my troubles. In an old recipe book, which I found in the closet under the stairs it told how to tan skins, so I began tanning my wolf skins. I whittled out some puzzles, too, and made a leather collar for Pawsy, but she would not wear it. I forgot to say that after the fight I found her in her old place over the door. I taught Kaiser some tricks, too, and gave the cat a chance to improve herself in the same way, but she refused the opportunity.

I did some reading, too, during these days. There was little to read in the Headquarters house, but among Tom Carr's things I found a book by Dr. Kane, telling of his life in the arctic regions, and this I enjoyed a great deal, feeling that I was in a country not much warmer, and that I must be more lonely than he was, since he always had human companions, while I had not one. In Mr. Clerkinwell's rooms over the bank I found some other books, all with very fine leather covers. Some of these I took the liberty of borrowing, but was very careful of them. One was "The Pilgrim's Progress," and I liked most of it exceedingly, especially the fight in the king's highway which Christian had with Apollyon. Another book was a story, very entertaining, by Charles Dickens, about little Pip and the convict who came back from Australia; I felt very sorry for Pip when he had to go out on the wet marshes so early, he being so little and the marshes so big.

There was another thing that I tried to amuse myself with, being nothing less than music. I found an old banjo belonging to Tom Carr and an accordion which Andrew had left behind. The banjo I could not do much with, but when I saw the accordion I said to myself that if I could blow the bellows in my father's forge, I ought to be able to work an accordion. So I went at it, hammer and tongs, and soon could produce a great noise, though mighty dismal, I think, and maybe what you would (had you heard it) have called heartrending, since whenever I started up Kaiser would point his nose to the ceiling and howl, very sad indeed. I think when one of our concerts was going on that could a guest have arrived at the Headquarters house he would have thought he had found a home for lunatics and not a hotel for an honest traveler who could pay his way.

During the blizzard also I drew up in black and white a program for each day which I decided I must follow out when the weather became better, though I had lived up to most of it from the first. Thus it was:

Five o'clock—Get up, start fire in hotel and make cup of coffee.

Five-thirty—Inspect fires in bank and three stores.

Six o'clock—Feed horses and cow and chickens, and milk cow.

Six-thirty—Get breakfast for self and Kaiser and Pawsy (which included washing the dishes, a hard job).

Seven-thirty—Inspect depot fire and

We got it along and into the office.

climb windmill tower and look over country with glass.

Eight o'clock—Finish work at barn, and for two hours such miscellaneous work as might be doing, as tunnels or other fortifications.

Ten o'clock—Windmill mounting again; miscellaneous work for two hours.

Noon—Dinner for family and work at barn.

One-thirty—Inspection of fires and windmill mounting; followed by miscellaneous work.

Three o'clock—Windmill mounting; miscellaneous work.

Four-thirty—Final daylight inspection of country from windmill; miscellaneous work.

Six o'clock—Supper and work at barn.

Eight o'clock—General inspection of fires and town, including observation from windmill for lights or fires.

Nine o'clock—Bed.

This system I followed out pretty closely whenever the weather was at all fair. When there was no miscellaneous work I would practice on the skis, shoot at the target, or something of this sort. Quite often on days when the weather would allow (though there were few enough of them) I would go up around and beyond the Butte on a little hunt. I got several jackrabbits and three more wolves. One of the wolves I left outside the shed, forgetting it. In the morning it was gone. There were not many thefts, however, and the shed was not broken into any more, though, to be sure, I had made the door twice as strong as it was before, and kept everything about town carefully and strongly locked, especially the buildings where the guns and ammunition were.

During the worst storms I used to sleep on the lounge in the hotel office, but at other times I always retired to the other building and took in the drawbridge. Two or three times, just for a change, I took Kaiser and slept in the fire stronghold. Kaiser and Pawsy still remained as much company for me as they had been from the first. What I should ever have done in that solitude without them I don't know. The great bushy wag of Kaiser's tail, and the loud purr of the cat, were the two things that cheered me more than anything else. I do believe that cat to have had the loudest purr of any cat that ever lived. A young tiger need not have been ashamed of it. And as for the grand wave and flourish of Kaiser's tail, it is beyond all description.

On one of my rabbit hunting trips, about a week after the big blizzard, I very foolishly got both of my feet frost-bitten and paid the full penalty. The day seemed not quite so cold, and I did not put on the heavy pair of woolen stockings which I commonly wore outside of my shoes and inside of my overshoes. I crouched behind a snowbank beyond the Butte for some time waiting for a rabbit which I saw to come within range, something which he did not do, and was so interested in this that I did not notice what was happening to my feet. But what had happened was quite plain enough when I got home and a great ache set up in my toes. I got the dishpan full of snow and thrust my feet in, to draw out the frost gradually, but this did not save me.

Two days later I was fairly laid up. One whole day I could scarce crawl about the hotel office and keep the fire going. I could not get to the barn to feed the animals, though they were suffering for food and water, and what I called my war fires in the other buildings I knew were out. My feet were much swollen, and the pain and the worry must have brought on a fever, and I lay on the lounge all day expecting nothing less than a fit of sickness, and what will become of me? I asked myself. I had no appetite for food, which alarmed me very greatly. I remember no day of my life at Track's End which seemed darker to me.

Toward night I fell asleep, and awoke with Kaiser licking my face and whining. I remembered that I had seen in the pantry a package of boneset, an herb by which my father set great store, holding it a sovereign remedy for all common complaints. I roused up, and by clinging to the back of a chair hobbled after it, and steeped myself a large mugful, very hot, and I believe it did me good. Be this as it may, as the saying is, I was better the next day, and managed to feed the poor, hungry creatures at the barn, and the day after I was able to start the fires. But for a week my feet were very painful and I suffered much.

It was a little more cheerful as the days began to get longer as February went on, and in the latter part of the month I thought the weather seemed to grow slightly better on the whole. For three days after the big blizzard the thermometer had stood from 40 to 45 below zero each morning, and it did not get up much higher at any time during the day. On the last two days of February it thawed a little in the afternoon, and on March 2 the snow was soft enough so I could make snowballs to throw at Kaiser, but it soon turned cold again.

There were northern lights many nights, flaming all over the heavens, like long swords, and on the night of February 15 there were some more prodigious than I would believe were possible had I not seen them with these eyes. They hung, wavering and trembling, over the whole northern sky almost to the zenith, like the lower edges of vast, mighty curtains, swaying and moving, now here, now there, and with all colors, yellow, violet, scarlet, blood red, as if the whole heavens were going to burn up, the thing being so marvelous that had I not seen lesser displays before I should have thought the world were at an end, no less, and have died, I do believe, of terror. As it was I stood in the snow by the barn gazing till my feet were like blocks of ice and I knew not if I were in Track's End or in the moon. Kaiser at first barked at the sight, then growled, then whined, and next ran yelping away to the shed, where I found him crept beneath a bench. Never in my life before nor since have I seen anything to equal the heavens that night. Early on the morning of February 24 I saw a beautiful mirage. I could see plainly, high in the air, the timber and bluffs along the Missouri, and the Chain-of-Lakes and coteaux. It lasted for a full half hour.

It happened on the night of March 14 that I took it into my head to sleep another night in the stronghold with Kaiser, and so brought about one more startling thing. It seemed that I must always be doing something instead of staying content with things as they were. It had been thawing a little for several days and I was beginning to wonder if I could not hope for such weather that the train might get through before long and release me from the awful place, though I knew the snow was packed in the cuts all along the line to the east like ice, and that it would take a great thaw to make any impression on it.

About 9 o'clock I left the hotel, after carefully locking everything, and went through the tunnel to the barn with Kaiser, my rifle and the lantern. I locked all the doors behind me, and then we crawled through the small door under Ned's manger, and that I fastened also. In the stronghold I rolled up in a blanket and the buffalo robe with Kaiser beside me. I left the lantern burning in the tunnel just beyond my feet at the edge of the stack. Kaiser barked at something when we first got in; later I heard wolves sniffing about on the roof; then we both went to sleep.

Some time in the night I awoke; what woke me I suppose I shall never know. But when I awoke I sat up suddenly as if I had never been asleep. I was face to face with the worst-looking creature I had ever seen in my life, black and blear-eyed and ugly, on his hands and knees in the tunnel beyond the lantern drawing my gun toward him by the stock. Then Kaiser sprang up like any wild beast, but I held him back by the collar.

CHAPTER XIX.

I find out who my visitor is: with something about him, but with more about the Chinook which came out of the northwest: together with what I do with the powder and how I again wake up suddenly.

When I sat up there in the stronghold and saw that creature with the glare of the lantern on his hideous face I knew two things, and these were, first, that it was an Indian, and, second, that he was the thief who had made me so much trouble, though how I knew this latter I can't say. I knew, too, that I was at his mercy.

What I should have done first I don't know if it had not been for Kaiser, but he acted so that it took all my strength to quiet him. I saw it would not do to let him spring at the wretch, who was now squatting in the snow at the mouth of the tunnel with my gun on his knee, the muzzle pointed straight at me.

When at last Kaiser began to act like a reasonable being, I said to the Indian, pretty loud and sharp, so he wouldn't know I was scared:

"What do you want?"

He grunted and made a noise down in his throat, which I couldn't see meant anything. So I said:

"Don't understand. Where'd you come from?"

He only grunted again. I knew that a great many times an Indian will pretend he can't talk English when he can, so I kept at him.

"What you going to do with my gun?" I next asked him.

This seemed to interest him. He looked down at it over his thick eyelids and said in very good English:

"Shoot thieves. Steal Indians' ponies."

It flashed upon me that perhaps I could make him help me after all, though I could see that he was a renegade and a drunkard.

"Did you see the fight?" I asked, beginning vaguely to suspect the truth.

He gave a grunt which meant yes. "Heap good fight," he added.

"Will you help fight if they come again?"

He said nothing, but sat looking at Kaiser, who was still growling, and only kept back because I held him by the collar.

"Where do you stay?" I asked. He made no answer.

"How did you come here?" I went on.

"Other Indians," he said. "Long sleep—gone when wake up."

"Did you see face—all fire—looking at you down in cellar?"

He only gazed at me out of his little black eyes. I guessed that he had drunk more than the others and had gone to sleep before the bad spirit looked in at the window, and so had not seen it and had been left behind.

"Did you see barn burn—big fire?" I asked.

He made not a sound in reply to this.

"Give me the gun," I said.

He gave his head a little shake and jerked out a sharp grunt.

"Give it to me and I give you another tomorrow."

He made not a movement or sound. I

could see that he had no intention of giving it up.

"Do you live in cellar?" I asked. He made the sound that seemed to mean yes. I remembered that I had not gone down into Fitzsimmons' cellar after the Indians went away because things were in such confusion that I saw I could do nothing with them. Since that I had had no occasion to go into the store at all. I had no doubt that he had stolen everything I had missed, but had been unable to get a gun before, because I had kept them very carefully under lock and key. I thought from his looks that he had probably lived principally on the liquor in the cellar, with the groceries that were in the store and what meat he had stolen from me. I could feel that it was getting colder in the stronghold, and guessed that he had broken open the tunnel, either purposely, after hearing Kaiser bark, or by accident when walking over it, as the thaw had weakened the roof a good deal.

"Want to get out," I said. "Go first!"

He pressed back close to the wall of the tunnel. "You go—take dog," he said. I made Kaiser go ahead, took the lantern and followed, saying "Come" to the Indian. He did so, simply stooping down, though I crawled on my hands and knees. Sure enough, the tunnel was broken down near the barn. We got out through the hole and went across the drifts to the open place back of the hotel. I tried again to get the gun away from him, but he hung on to it tighter than ever. I asked him if he were hungry, and he forgot to grunt and said "yes."

I brought out some food for him, and he stood in the shed and ate it like a hungry wolf. He gave a satisfied grunt when he got through, and I once more tried to get him to let me have the gun, but he hung to it without even a grunt, and started in the direction of the Fitzsimmons building. I went with him, as I could not understand how he had gone in and out for so long without my seeing some traces of it.

He stalked on in silence, his moccasins not making a sound on the hard snow. There was a well with a high curb a few feet behind the Fitzsimmons building and directly opposite the window through which I had shown the jacklantern. There was now a big bank of snow as high as the well curb from it to the building. He stepped over in the well curb, and, without looking back, disappeared through a hole in the side of it where he had pried off some of the boards. He had borrowed one of my ideas and made a tunnel between the well and window.

I went back to the hotel, and though I did not like the notion of his having the gun, there was a great load gone from my mind. I saw that every mysterious happening could be explained by the presence of the Indian. I made no doubt he had set the livery stable on fire by using matches when visiting it to find something to steal. A few sounds and part of the glimpse I got of him that night when I watched in the shed would have to be charged to my imagination, but I guess it could stand it. I had to laugh at myself when I remembered how I had thought I heard strange noises before the Indians came at all.

I think I slept better the rest of the night (though it was only a few hours) than I had for a long time, notwithstanding the shock I had got when I sat up and saw the Indian, when my heart, instead of beating too much, just stood still and didn't beat at all.

I saw nothing of the Indian the next morning, and after breakfast went to the Fitzsimmons store. I took the lantern and went down cellar. Everything was still in the greatest disorder. Boxes of groceries had been broken upon, and empty cans were scattered everywhere. The missing saddle lay in one corner. I looked about for the Indian, and at first thought he was gone. But at last I found him half in a big box turned on its side, rolled up in blankets, some of which he had stolen from the bed in the hotel. One was a horse blanket which I was sure came from the livery stable, so I now felt certain that he had been responsible for the fire. He was sound asleep. I poked him with my foot, but he did not move. I instantly knew that he had been drinking more of the whisky and was sleeping off its effects. I picked up a hatchet, knocked off the spigot and let the contents of the barrel run on the ground.

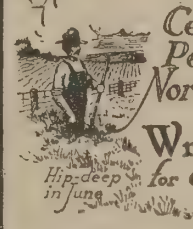
I took my lantern and started for the cellar stairs. I glanced back at the Indian, and just as I did so he moved one foot a trifle and I saw something under it. I went back and looked closer and saw that it was the stock of my rifle, of which I had not once thought that morning. I instantly decided that I must get it away from him.

I stood my lantern in line with the foot of the stairs, knelt down and very slowly and cautiously began to pull the gun from beneath the Indian. He was lying on it full length, and I knew there was vast danger of waking him. He was much larger than I, and I made no doubt three times as strong. I fairly held my breath as the weapon slowly yielded to my efforts. I got it perhaps a third of the way out when it stuck fast, caught, perhaps, on some of the Indian's clothing. I pulled as hard as I could. It disturbed him, and he moved his feet, and then with one arm threw off the blanket from his shoulders. Like a flash I made up my mind to have that gun regardless of anything.

I jumped forward, and with my knees and hands rolled that savage over as if he had been a log of wood, grabbed the rifle, and started for the stairs. I snatched at the lantern, but missed it and knocked it over. The flame wavered for an instant and went out. Up the stairs in total darkness I swarmed on all fours, dragging the gun by the muzzle, so that had the hammer caught on anything I am sure the bullet had gone clean through my body. I slammed the door at the top, scrambled out a side window where I had got in, and ran across the drifts to the hotel like a scared coyote, sitting down in the office weak as a cat. I expected no less than that he would follow me, but he did not, and I question if he roused up further from his drunken stupor. Looking back I see what a coward I showed my self, but it seemed quite natural at the time.

(To be continued.)

TO ORGANIZE DAIRY CLUBS.



Cooperating with the Yakima county Holstein breeders and the Guernsey breeders' association, plans have been formulated for the organization of several dairy calf clubs on a three-year basis. Yakima banks have given assurance of financial backing to as much as $12,000 to $13,000 to put over the organization of these clubs. County Agent E. C. Scott is promoting the movement.

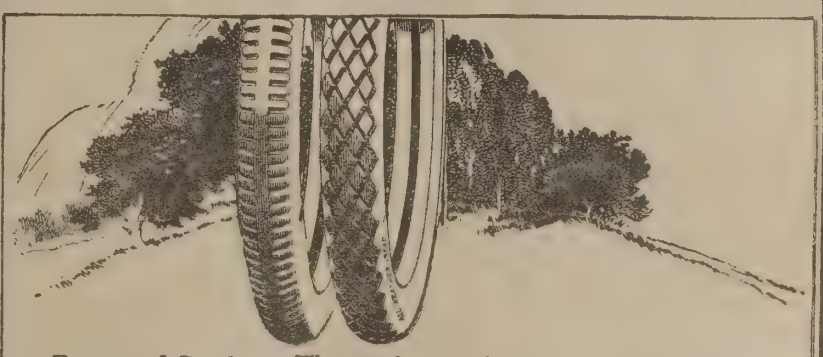
NEW SERIES Overland

"The Most Economical Car I Have Ever Driven"

Thousands of farmers who drive Overlands could say just as much as this farmer-owner writing from Oregon.

Twenty-five miles and upwards to the gallon of gas is very common—with high mileage for oil and tires.

Low first cost plus low operation and upkeep expense make the New Series Overland today's outstanding automobile value.



TOURING complete $595 f. o. b. Toledo

Roadster $595 Coupe $850 Sedan $895

WILLYS-OVERLAND, INC., Toledo, Ohio

TYPICAL OF GOODYEAR VALUE

Buyers of Goodyear Tires today are in an enviable position. Their money buys more in tire quality and tire mileage now than ever before.

The first reason for this is the improved design and construction of Goodyear Tires.

The second is their present low prices—the lowest in the history of the company.

Typical of Goodyear values now is the popular 30 x 3½ Goodyear Cross Rib clincher, illustrated above with its companion, the famous 30 x 3½ Goodyear All-Weather Tread.

More than 5,000,000 of these Goodyear Cross Rib Tires have been sold in the past five years.

Built of the same high grade Egyptian cotton fabric that goes into the All-Weather Tread Goodyear, with a long-wearing but differently designed tread, they have given remarkable service.

The exceptional value afforded in them is proving to thousands of car owners the folly of buying unknown and unguaranteed tires.

You can get these tires from your nearest Goodyear Service Station Dealer. Ask him to explain their advantages.

Experience Letters

From Our Family Circle Women

Dear Sisters of the Family Circle: Since most of us have to make, mend, patch and darn to extend the usefulness of garments, I will give some hints and methods.

If socks and stocking are darned on the heels before they are worn they will last twice as long before showing holes. It is easy to do this when the hose are new and soft and one may use yarn, coarse thread or string, the soft kind taken from the seams of flour sacks, run lengthwise first then on the bias. The knees of children's stockings can be protected this way, having the long stitch on the inside and the short one outside. The same can be done with the heels of stockings to be worn with low shoes so the stitches won't show. It can be done in a few odd minutes.

In mending underwear I cut the patches on the bias whether I use knit goods or plain, for patches. In making dress waists, kimonos, etc., I put a patch on the underside of the sleeves, next to the arm hole and also on the back edge of the fronts next to the armhole, taking care to match if the goods is figured. When the elbows and knees of knit wear show thinness I cut them off several inches above the thin places, sewing the left on to the right and the right onto the left, stretching the seams as I sew them

When making children's dresses put the tuck in the hem then when it is let out the bright cloth will be at the bottom and will not look tacky. Cut sleeves of coats two or three inches longer at the top, sew up the length first required and the extra length will fit the garment easily and can be let down as needed; also cut the cuffs deep enough to let down, thus keeping the shape of the sleeve balanced.

Out of a sweater which was "passed on" to me, I made a small sweater, cap and mittens for a boy of 6 years. Out of wool sock tops I make cute tams, bootees, and mittens, using bright yarn for pompons, edgings, etc. For the little tots, too young to wear knit garments, but who should have limbs protected, cut out leggings from discarded underwear, leaving about 21-2 inches open at the ankle, so if necessary to remove unbutton the shoe, let down the stocking and the legging will slip off. Hold them in place with supporters over both leggings and stockings. They are a great protection and three pairs are a plenty.

If others have helps please send them along as I have 10 grandchildren—one pair of twins—and as I like to help, would like to get ideas along these lines.—Mrs. L. A. P.

Corn Bread Without Eggs

When we lived in Alaska my wife said she could not make corn bread without eggs or sour milk. Here is an invention of mine to overcome the difficulty, and we still make our corn bread by this recipe, though we have both eggs and milk:

Sift together one cup of corn meal, one cup of wheat flour, one teaspoon of salt, two heaping teaaspoons of baking powder. Stir in and beat well enough sweet milk so that it will pour into the bake pan and run down flat. Bake one-half hour.

Rogue River, Ore. WM. M. CARLE.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

HOW TYPHOID IS "CARRIED."

It was not long ago that typhoid fever was one of the most common and most fatal of diseases. Today, in a well-conducted community it is almost never met.

Dr. Copeland.

I often wonder why any educated person can sneer at the germ theory of disease and scoff about what the laboratory has done for the world. The control of typhoid fever should be enough to convince the most skeptical that society owes an overwhelming debt of gratitude to the bacteriologist.

When I was a medical student we used to hear dreadful tales of the decimation of communities by this dread disease. The bullets of the Spanish war did little harm compared with the devastation of the germs of typhoid.

Fortunately for the world, the control of typhoid had been learned before the advent of the World war. It was of little importance, because of the means of protection provided by the medical corps.

The typhoid germ or bacillus is hardy. In the presence of moisture it will live for months. Even in river or harbor water it will remain alive for weeks. One writer says the bacillus has lived in a sealed tube for more than a dozen years. When typhoid-infected water freezes, the germ will live for three or four months in the ice.

The germ enters the human body through food or drink. Water, milk, contaminated vegetables and other articles of food may carry the bacillus.

The person who has once had the disease may be spreading the germs of typhoid for months or years after he has recovered. Examination of the urine sometimes reveals them. In some reported cases they have been discovered here years after the patient had the disease.

The "typhoid carrier" usually has a colony of germs growing in his gall-bladder. A noticeable example of this sort is "Typhoid Mary," who has been under quarantine for years, because of the large number of cases of typhoid traced to her.

Every case of typhoid fever means that some one else had the disease, and, by careless disposal of the body wastes, has passed it on to the present victim. This might be done through food or drink, or the contagion might be carried by flies.

The doctor, nurse, members of the family, and the servants of the place in which lives a person sick with typhoid should be impressed with the importance of guarding against the transmission of this dread disease.

If the first patient is properly cared for that case will be the end of the typhoid flurry in that neighborhood.

Just Folks

Law means order.

Acquirement may be a burden.

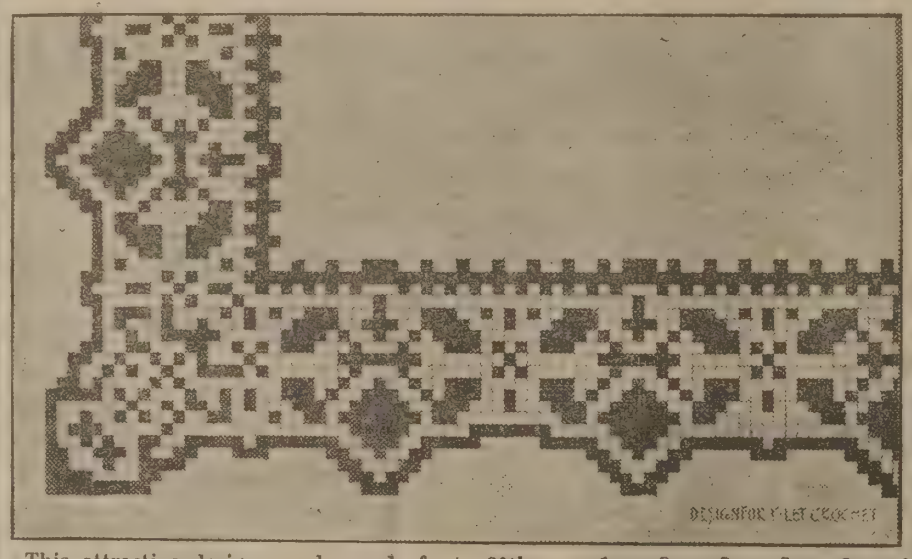
Better leave some things undone.

Charity is the bigger part of wisdom.

Part of disappointment is in naming it.

Mistakes give the other fellow a chance.

A good time and a bad time are near neighbors.



One of the high lessons of life is to learn to overlook.

Garnished platitudes are more pleasing than ungarnished facts.

Joys bring no more blessings than necessity—probably not as many.

Filet Crochet for Various Uses

This attractive design can be made for various uses and the size thread to be used should be gauged by the width desired. For edging square or oblong pieces of fine linen, the medium or fine thread should be used. If for heavier materials for table covers, piano scarf, dresser scarf or bedspread the coarser cottons are used. The number of stitches is the same whether the thread be Cordonnet crochet cotton No. 100 or No. 10. Start with 57 ch sts.

1st row: 1 sp, 2 gr, 4 sp, 1 gr, 1 sp, 1gr, 5 sp, 2 gr, 3 ch sts.

2d row: 1 gr, 3 sp, 2 gr, 2 sp, 1 gr, 2 sp, 2 gr, 2 sp, 1 gr, 1 sp, 3 ch sts, turn.

3d row: 3 gr, 4 sp, 1 gr, 1 sp, 1 gr, 5 sp, 2 gr, turn, 3 sl sts, 3 ch sts, dropping 1 gr.

4th row: 1 gr, 1 sp, 1 gr, 8 sp, 1 gr, 2 sp, 1 gr, 1 sp, 5 ch sts, turn.

5th row: 1 sp, 2 gr, 3 sp, 2 gr, 2 sp, 2 gr, 3 sp, 1 gr, 3 ch sts, turn.

6th row: 1 gr, 2 sp, 3 gr, 2 sp, 3 gr, 3 sp, 2 gr, 5 ch sts, turn.

7th row: 1 sp, 2 gr, 1 sp, 4 gr, 2 sp, 4 gr, 1 sp, 1 gr, 3 ch sts, turn.

8th row: 1 gr, 1 sp, 2 gr, 5 sp, 3 gr, 2 sp, 1 gr, 1 sp, 3 ch sts, turn.

9th row: 3 gr, 1 sp, 2 gr, 5 sp, 1 gr, 3 sp, 2 gr (to form a gr, without a foundation make 1 t c into same st as last d c, * 1 t c, catching into lower portion of t c, just completed, repeat * together forming 1 gr), 5 ch sts, turn.

10th row: 1 d c into 4th ch st, 1 d c into each of next 2 sts, forming 1 gr, 1 gr, 2 sp, 1 gr, 2 sp, 1 gr, 1 sp, 1 gr, 1 sp, 1 gr, 4 sp, 1 gr, 1 sp, 5 ch sts, turn.

11th row: 1 sp, 2 gr, 4 sp, 3 gr, 2 sp, 3 gr, 2 sp, 2 gr, 5 ch sts, turn.

12th row: 2 gr, 2 sp, 5 gr, 2 sp, 1 gr, 2 sp, 1 gr, 3 sp, 2 gr, 3 ch sts, turn.

13th row: 1 gr, 2 sp, 4 gr, 1 sp, 1 gr, 1 sp, 7 gr, 2 sp, 1 gr, 3 ch sts, turn.

14th row: 2 gr, 2 sp, 5 gr, 2 sp, 1 gr, 2 sp, 1 gr, 3 sp, 2 gr, 5 ch sts, turn.

15th row: 1 sp, 2 gr, 4 sp, 3 gr, 2 sp, 3 gr, 2 sp, 2 gr, turn, 3 sl sts, 3 ch sts.

16th row: 2 gr, 2 sp, 1 gr, 2 sp, 1 gr, 1 sp, 1 gr, 1 sp, 1 gr, 4 sp, 1 gr, 1 sp, 3 ch sts, turn.

17th row: 3 gr, 1 sp, 2 gr, 5 sp, 1 gr, 3 sp, 2 gr, turn, 3 sl sts, 3 ch sts.

18th row: 1 gr, 1 sp, 2 gr, 5 sp, 3 gr, 2 sp, 1 gr, 1 sp, 5 ch sts, turn.

19th row: 1 sp, 2 gr, 1 sp, 4 gr, 2 sp, 4 gr, 1 sp, 1 gr, 3 ch sts, turn.

20th row: 1 gr, 2 sp, 3 gr, 2 sp, 3 gr, 3 sp, 2 gr, 5 ch sts, turn.

21st row: 1 sp, 2 gr, 3 sp, 2 gr, 2 sp, 2 gr, 3 sp, 1 gr, 3 ch sts, turn.

22d row: 1 gr, 1 sp, 1 gr, 8 sp, 1 gr, 2 sp, 1 gr, 1 sp, 3 ch sts, turn.

23d row: 3 gr, 4 sp, 1 gr, 1 sp, 1 gr, 5 sp, 2 gr, 3 ch sts, turn.

24th row: 1 gr, 3 sp, 2 gr, 2 sp, 1 gr, 2 sp, 2 gr, 2 sp, 1 gr, 1 sp, 5 ch sts, turn.

25th row: 3 sp, 1 gr, 3 sp, 1 gr, 1 sp, 1 gr, 5 sp, 2 gr, turn, 3 sl sts, 3 ch sts.

Bits of Fun for Everyone

Ode to a Young Man.

There was a young man from Hoboken
Who wished that he never had spoken
When he cried "Fire! Fire!"
For they said: "What a liar!
That's only the smokehouse a-smokin'."
Armour Swift Cudahy.

The First Three Times.

She—If I refuse you, will you commit suicide?

He—Er—that has been my usual custom.—Passing Show, London.

Got Results.

Stockson: "One day last week old man Gotrox bought a lot of those 'Do It Now' signs and hung 'em around the office."

Bond: "How did the staff take it?"

Stockson: "Almost unanimously. The cashier skipped with $30.000; the head bookkeeper eloped with the private secretary; three clerks asked for an increase of salary, and the office boy lit out to become a highwayman and got as far west as Pittsburgh before he was caught and disarmed."—National Magazine.

Hog Meat.

"I once printed a poem for that rural subscriber and today he sent me another valuable contribution from his pen."

"Another poem?"

"No. A prime pig."

Powder Might Do as Well.

Maud—Why should she want her portrait painted?

Grace—Well, she's getting too old to look well in a photograph.—London Opinion.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3462. Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size will require 6 1-2 yards of 44-inch material. The width of the skirt at lower edge is 1 7-8 yards. Price 10 cents.

3831-3695. Ladies' costume. Waist 3831, cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 3695, cut in six sizes: 24, 26, 28, 30, 32 and 34 inches waist measure. The width of the skirt at the foot is 2 3-4 yards. To make the dress as illustrated will require seven yards of 36-inch material. Two separate patterns, 10 cents for each pattern.

3890. Ladies' wrap. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 4 3-4 yards of 44-inch material. Price 10 cents.

3593. Junior dress. Cut in three sizes: 12, 14 and 16 years. A 14-year size will require 3 3-4 yards of 38-inch material. Price 10 cents.

3895. Misses' one-piece dress. Cut in three sizes: 16, 18 and 20 years. A 16-year size requires 4 1-2 yards of 36-inch material. The width of the skirt at the foot is about two yards. Price 10 cents.

3398. Ladies' apron. Cut in four sizes: Small, medium, large and extra large. A medium size will require 3 7-8 yards of 36-inch material. Price 10 cents.

3877. Ladies' apron dress. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 6 1-2 yards of 27-inch material. Price 10 cents.

3523. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size will require 3 1-4 yards of 36-inch material for skirt and suspenders, and 1 3-4 yards for the waist. Price 10 cents.

HOME dinners require suitable desserts. Jell-O makes a home dinner complete,—it is just right.

Jell-O has a light and velvety quality that makes it an ideal finish for dinner. It satisfies. Jell-O is so pretty that it rouses the family's interest at once, and it is as good as it looks.

JELL-O
America's Most Famous Dessert

The American Offices of The Genesee Pure Food Company are at Le Roy, N. Y. The Canadian Offices are at Bridgeburg, Ont.

WESTERN CANADA
Land of Prosperity

offers to home seekers opportunities that cannot be secured elsewhere. The thousands of farmers from the United States who have accepted Canada's generous offer to settle on FREE homesteads or buy farm land in her provinces have been well repaid by bountiful crops. There is still available on easy terms

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years **has yielded from 20 to 45 bushels of wheat to the acre**—oats, barley and flax also in great abundance, while **raising horses, cattle, sheep and hogs** is equally profitable. Hundreds of farmers in western Canada have raised crops in a single season worth more than the whole cost of their land. With such success comes prosperity, independence, good homes and all the comforts and conveniences which make life worth living.

Farm Gardens, Poultry, Dairying

are sources of income second only to grain growing and stock raising. Attractive climate, good neighbors, churches, schools, good markets, railroad facitities, rural telephone, etc.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

High Points in News of the Week

Possibly the outstanding news developments of the last week have been in connection with the proposed soldiers' bonus. While there is a great demand for a bill of this kind, and while the sentiment in congress appears to be strong for its passage, President Harding, Secretary Mellon of the treasury department and others responsible for the financial administration of the country's affairs have expressed doubt as to its being advisable at this time to pass a bonus bill. All manner of methods of raising the money have been discussed, including the floating of government bonds and the levy of taxes to redeem them, levy of several forms of special taxes or the levy of a general sales tax. President Harding has personally and officially announced that he considers the sales tax as the only practical means of raising the money to pay the proposed bonus.

The development is of special interest in the farmers of the country because of the unalterable opposition of organized farmers to the sales tax for any purpose whatsoever. It is considered extremely doubtful whether a bonus bill carrying with it a provision for a general sales tax can be passed by the senate, owing to the opposition that would be made to it by the farm bloc.

This is one of the first instances in the history of this country when the farmers have been in position to play a leading part in determining the character of an important piece of national financial legislation. It is not to be understood that the farm bloc has gone on record as opposed to the bonus for the ex-service men, but that it is opposed to raising the money by a sales tax on the things that the general public, including the farmers, must buy. Opposition to the sales tax is based on the ground that it would have to be paid by the ultimate consumer.

* * *

There appears to be no longer any doubt that the general business condition of the United States is improving. Resources of the national banks of the United States, which are considered a reasonably accurate indicator of financial conditions, were shown by last week's report of the comptroller of currency to total $19,422,000,000, or about $406,000,000 more than six months ago. All deposits in these national banks totaled over $16,000,000,000, or about $514,000,000 more than six months ago. An official statement accompanying the comptroller's report says that the figures "demonstrate that the peak of liquidation and consequent depression was passed somewhere between September 6 last and December 31, and the tendency has been steadily toward improving business."

The prices of farm products in comparison to what the farmer must buy have been gradually improving. This is no doubt partially due to an improvement in the export demand.

* * *

Committees in the United States senate are already at work on the treaties that President Harding recently submitted to them following the adjournment of the recent conference on the limitation of armaments. It is expected that the seven treaties will all be acted upon at about the same time. The only one that is expected to develop strong opposition in the senate is that of the so-called four-power pact between this country, England, Japan and France, providing for the peaceable control of the affairs of three nations on the Pacific ocean.

* * *

With a view to building up the American merchant marine, a movement is under way for the subsidizing of owners and operators of American ships. It is proposed to provide governmental aid to the extent of some $30,000,000 a year. This is a plan followed for many years by the British government, and under which that country has built up her merchant fleet to a commanding position.

* * *

Senate Capper of Kansas appears to be the most likely senator to take the place of Senator Kenyon of Iowa as leader of the farm bloc in congress. Senator Kenyon resigned recently to accept appointment as federal judge in a middle western district.

* * *

President Harding last week signed the Capper-Volstead bill legalizing cooperative farm marketing organizations. It will be remembered that one of the "five points" that THE FARMER urged in its letter to President Harding and the recent agricultural conference in Washington was that a bill be enacted removing every possible doubt as to the right of farmers to organize and market their products collectively. It is hoped that this bill will go far toward that accomplishment.

* * *

The president is expected early this week to appoint the commission upon whose shoulders rests the responsibility of working out the plan for handling the foreign debt situation. Foreign countries owe America several billion dollars as a result of war loans, and the commission is required to work out equitable plans under which these loans may be paid during a period of years.

* * *

There is a sturdy fight on in congress over whether the American valuation or foreign valuation of imports shall be used as the basis on which to calculate protective tariffs. This question must be settled before the permanent tariff bill can be enacted and put into effect.

* * *

Secretary of the Interior Fall has announced as the administration's plan the inclusion of all four forms of reclamation of land under any comprehensive measure passed by congress. This idea is proposed to be incorporated in the present McNary reclamation bill, under which a revolving fund of $350,000,000 would be appropriated by the government. This fund would ultimately produce some $2,000,000,000 for reclamation purposes. The four kinds of reclamatoin given by Secretary Fall are: Irrigation, drainage, diking and clearing logged-off lands.

Wheat $1.20 at Hooper

The McGregor Land and Live Stock company of Hooper, of which Peter McGregor is president, has just sold 10,000 bushels of Early Baart wheat at Hooper, Whitman county, Wash., at $1.20, making the sale one of the best of the season in the amount net to the grower.

KITSAP JERSEY MEN ORGANIZE.

Jersey breeders of Kitsap county recently organized the Kitsap County Jersey Cattle club, Harold Todhunter of Port Gamble, president, and F. G. Zeigler of Port Blakeley as secretary.

Farm Business and Markets Outlook

(Continued from page five.)

Prices for No. 1 American cheese on February 11 were:

Chicago—Flats, 21 1-2@22c; twins, 21@21 1-2c; S. Daisies, 21 1-2@23 1-4c; D. Daisies, 22@22 1-2c; Longhorns, 22 1-2@24c; square prints, 23@24c.

FRUITS AND VEGETABLES.

The total movement of potatoes for the season up to February 12 amounted to 169,274 cars compared with 151,188 cars in the same period last year. Since the 1921 crop was smaller than that of 1920, the quantity remaining in producing sections is believed to be smaller than a year ago. Wisconsin and Colorado are said to have a large surplus still to be shipped. Northern sacked round whites are quoted at $1.50 to $1.70 f. o. b. shipping points and $1.60 to $1.95 in the Chicago carlot market.

Apple markets advanced again last week, Baldwins being quoted at a range of $7.50 to $8.50 in wholesale markets and $7 to $7.25 f. o. b. New York shipping points. Boxed apples advanced more than barreled stock with extra fancy Spitzenburgs quoted at $2.75 to $4 in wholesale markets.

LATEST QUOTATIONS.

Emma Pflug is learning to write letters on the typewriter. She is going to typewrite her next letter to Aunt Nellie, if she learns how by that time. This is Emma's sixth letter to the Corner. She says she goes sleighriding. One Sunday when her friend, Etta, came to see her, they had a good time sleighing. Emma lives east of the Okanogan river in north Washington.

Jack Litt, 8 years old May 23, 1922, says he likes Aunt Nellie. Aunt Nellie thinks Jack likes to work because he sent us a little story about bees and bees are great workers. Here it is: Honey bee, honey bee, where are you going? To fill my basket with precious pelf; to toil for my neighbor as well as myself; to find out the sweetest flower that grows. Jack lives near Crab lake in east Washington.

THURSDAY, February 23—Otto Loy, 11 years old; Helen Owen, 10; Freda Stump, 11.

FRIDAY, February 24—Sadie Nieme, 9 years old; Esta Rivers, 11; Clayton Smith, 8.

SATURDAY, February 25—Howard McLehn, 8 years old.

SUNDAY, February 26—Elwood Alexander, 10 years old; Margaret Liebing, 10; Millard Hale, 11; Corrinne Wyer, 11.

MONDAY, February 27—Jack Campbell, 8 years old.

TUESDAY, February 28—Cleo Beck, 10 years old; Alta Cason, 9; Alta Eaton, 9; Virginia Hershey, 10; Leonard Kinkaid, 11; Hazel Knapp, 10; Naomi Miller, 7; Karl Stauffacher, 10; Dora Urquhart, 8; Jennie Holmes, 10.

WEDNESDAY, March 1—Ora Bateman, 11 years old; Slyvia Johnson, 11.

Marion Meyers is a leap year girl. She was born February 29 10 years ago.

In each issue a list of the cousins' birthdays for the week will be published. At the close of each letter you write be sure to tell how old you are and when your birthday comes.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Lucile Martha Harding, James Arthur Webb, Annis Demko, Ruth Reynolds, Gerda Ekholm, Clairinda Fagan, Genevieve Halverson, Essie Grant, Rebecca Gorremans, Elizabeth Reykjalin, Esther Bakke, Ellen Make, Edna Kimble, Ruth Williams, John and Margaret May Blake, Helen and Elmer Prien, Anna Johnson, Doris and Cora Turner, Donald Whalen, Berniece Wynecoop, Evelyn Starr, Jewel Field.

Jack, Molly, Andrew and Marie Litt, Anna Thornton, Emma Pflug, Aileene Grainger, Gladys Rise, Jahan Van Ry, George Johnson, Everett Frye, Ida May McAuley, Helena Peters, Priscilla Oatman, Bertha Van Derschelden, George Lovos Kenneth Strong, Leonard Kinkaid, Lawrence McNell, May Dickenson, Aaro Ahonen, Florence Frye, Margaret Irwin, Rena Rise, Hazel Prien, Margaret Berg, Alfreda J. Kelly, Robert Gilmore, Elvira Case, Lottie and Eva Baumgardner, Leda Ruby Harrell, Frances Montague, Alice Larison, Astrid Larsen, Bessie Wagner, Alice Blakeman.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

BILLY BECOMES A BOASTER.

Billy Mink, Little Joe Otter and Jerry Muskrat sat on the Big Rock in the Smiling pool. Over on his big green lilypad sat Grandfather Frog. The Merry Little Breezes of Old Mother West Wind were playing with the buttercups and daisies on the bank, and Mrs. Redwing was singing to her babies in their cradle in the bulrushes.

Billy Mink was feeling very fine, very, very fine indeed, that morning. He had actually beaten Little Joe Otter in a swimming race. He can not do it very often, but he had done it that morning, and it made him feel very important. Now when people begin to feel important the feeling grows and grows. It was so with Billy Mink. He swelled himself up and began to walk back and forth on top of the Big Rock, and as he walked he began to boast.

"I can swim like a fish," said Billy Mink.

"Pooh! So can I!" exclaimed Little Joe Otter.

"Peter Rabbit can run faster!" said Jerry Muskrat.

"I can follow a track with my nose!" continued Billy Mink.

"So can Bowser the Hound!" grunted Little Joe Otter.

"I can climb trees like a flash!" bragged Billy Mink.

"So can Happy Jack Squirrel," said Jerry Muskrat, sliding into the Smiling Pool in disgust.

"I can do anything that anybody who wears fur and lives on the Green Meadows or in the Green Forest can do!" cried Billy Mink, and strutted up and down, on top of the Big Rock.

Grandfather Frog had listened and said nothing until Billy Mink had boasted that he could do anything that anybody else could do. Then he rolled his big, goggly eyes up at jolly, round Mr. Sun and began to sing in a deep voice:

"The boaster brags what he can do;
He swells his chest; his head swells, too.
Some day he'll burst, and then you'll find
He nothing had but an empty mind."

"I can do anything that anybody who wears fur can do."

Billy Mink stopped short and glared across at Grandfather Frog. "What's that you are saying?" demanded Billy Mink.

"Who can?" asked Billy Mink.

"Chugarum! I say you are a foolish boaster," replied Grandfather Frog, "for it is the easiest thing in the world to find somebody who wears fur to do something you can't do."

"I'm not going to tell," replied Grandfather Frog.

"You can't, because you don't know any one," sneered Billy Mink.

Grandfather Frog solemnly hopped up in the air and caught a foolish green fly who came too near for his own good.

"I never say what I can not prove, Billy Mink," said Grandfather Frog in his deepest voice. "I will prove it to you tomorrow night at sundown if you will agree to be here."

Of course, Billy Mink agreed. You see, little Joe Otter was listening, so he felt that he had to agree.

Strawberry Plants

Bear This Year.

Everbearing and others. Inspected plants, strong and healthy, well packed. Send for prices and book on care of strawberries.

CANYON HOME NURSERY
Ellensburg Washington

TREES AND SHRUBS

Fruit trees budded from bearing orchards. Apple, Pear, Cherry, Peach, Plum, Prune, Apricot, Quince, Grape Vines, Shrubbery, Plants, Raspberries, Blackberries, Logans, Dewberries, Asparagus, Rhubarb, Flowering Shrubs, Roses, Vines, Hedge, Nut and Shade Trees. Carriage paid. Satisfaction guaranteed.

Potato Disease Control in Washington

By GEORGE L. ZUNDEL, Extension Plant Pathologist, Washington State College.

There are two troubles found in our Washington potato fields that are causing millions of dollars' loss. They are mosaic, which is a physiological trouble, and rhizoctonia, which is a fungus disease.

Of the two diseases, mosaic is causing the greater amount of damage. The early symptoms are not easily recognized except by the professional. A mottling, of light and dark green appears on the leaves. There is a dwarfing of the leaves, petioles and stems. The leaves later become somewhat wrinkled. The entire plant is apt to be brittle. The later stages of mosaic are known as curly dwarf, which is known by most of our growers. It takes about three years from the time the first mosaic symptoms appear till the final curly dwarf stage is reached. The yield of affected plants is materially reduced. Sometimes there are several small tubers produced, but occasionally one or two good, smooth tubers are produced that would be used for seed if field rogueing is not practiced.

Mosaic can be transmitted from diseased to healthy plants in the field by means of sucking insects. This fact in the life history has just been found by recent experiments by the United States department of agriculture. Since mosaic can be recognized in plants six inches tall it is well to begin rogueing very early in the season.

Only One Means of Control.

Seed treatment will not control mosaic, since it is a physiological disease and can be told only while the vines are green. There are no symptoms on the tubers to tell which ones are produced from mosaic plants. Besides being disseminated by insects in the field mosaic is also transmitted through tubers from diseased vines. The only known means of controlling mosaic is by rogueing out all diseased vines from the field as early in the season as possible. It is possible that the field will need to be rogued several times during the season. In rogueing a field the farmer must be careful and remove all tubers as well as the vines.

The second important disease is rhizoctonia. This trouble is caused by a fungus. There is a long list of symptoms attributed to rhizoctonia, such as (a) attacking the sprout of the seed piece and killing it, thus causing missing hills, (b) retarding the growth of the young shoots, thus producing plants that are late in coming up (these plants are usually weak and do not produce any marketable tubers), (c) stimulating the production of a large number (50-75) small tubers, (d) the production of irregular tubers, (e) killing the stolens and forcing the tubers to form near the base of the stem, (f) the production of tubers on the stem above ground, (g) the production of a rosette stem, (h) the production of a large vine, but no tubers. These are only some of the symptoms. The brown lesions on the outside of potato stems are usually caused by the rhizoctonia fungus.

Two Ways to Control.

There are two ways of controlling this disease: (1) The use of clean seed planted on clean ground. (2) If sclerotia or "the dirt spots that will not wash off" are on the seed tubers, seed treatment should be used and the planting be done on clean soil. This fungus lives over winter in the soil and if the soil is infected neither clean seed nor seed treatment will amount to much in the control of this disease.

Another factor in the control of rhizoctonia must now be considered, and that is the date of planting. It has recently been found that a low temperature is favorable for infection. If, then, potatoes are planted early in the spring they will be more apt to become infected. This has been true, according to my observations over the state. It often happens that infected plants do not show symptoms of disease, while there is abundant moisture, but as soon as a hot, dry period of weather comes they will die very suddenly, due to the fact that part of the water-carrying tubes have been destroyed by the fungus and the roots can not supply the plant with water as fast as it leaves the plant by transpiration.

The late planting is also of advantage in that the tubers are not formed until after the July-August heat is past and a more vigorous tuber is the result. Under ordinary conditions the tubers do not form until late in the growing season.

Good Seed Is Essential.

With the above two diseases to combat the need of good seed is evident. The most vigorous seed is grown on non-irrigated soil in elevated mountain valleys. The use of seed from hot, irrigated valleys has not been successful, since the vigor rapidly deteriorates. The loss to potato growers in the United States from the use of poor seed amounts up into millions of dollars. No farmer ought to plant only the best certified seed.

The need of good seed in this state has been forcibly impressed upon me during the last two years in going over the state as extension plant pathologist. This need is especially evident in our irrigated sections.

Potato growers west of the Cascades need not fear degeneration of their potatoes, but need to rogue for mosaic. They have a climate suitable to the production of first-class seed stock. Seed can also be grown in the elevated portions of eastern Washington from the foothills of the Blue mountains up to Stevens and Pend Oreille counties.

Club Members Buy Purebreds

Ten swine club members of Kittitas county purchased purebred Chester White stock from Whitman county breeders for their club work during the last month. These members were: Warde Pugh, Helen Krege, Florence Robinson, of Ellensburg, and Louis F. Edes, Elmer Harvey, Merle Yearwood, Leonard Newman, Jack Snyder, Raymond Snyder and Ivan Hutchinson, all of Thorp.

The purebred Chester White gilts were selected and shipped to Kittitas county from Whitman county through the efforts of County Agent W. L. Davis and C. M. Hubbard. The stock was selected from the herds of H. S. Curtis of Palouse and Mr. Hoffman of Albion.

ENTIRE FAMILY ENJOYS THE WASHINGTON FARMER

The Washington Farmer is welcomed by the wives and daughters, the young men and boys on the farm just as it is by the farmer himself.

It keeps the entire circle of readers informed about the farm life of our own state, acquaints them with outstanding personalities, and keeps them posted on the problems and events the world over. The interests of the boys and girls are given plenty of space. The "family circle" with its constant interchange of experiences, ideas, opinions, and methods makes a strong appeal to the housewife. The stories, illustrations and special features appeal to all.

It follows that the expenditure of $1 for a five-year subscription is an investment in entertainment and instruction for the entire family.

The subscription price is low on account of our cooperative subscription plan. Instead of employing agents to go from farm to farm to solicit orders, we ask our readers to send in their own orders at least 60 days in advance of the expiration date on the wrapper of your paper, and to include the orders of friends and neighbors with your own.

You get the benefit of the money saved by this economical plan. In an effort to make 1922 even more successful for cooperation than the past years have been, we kindly ask that each and all of you do your part.

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

Feb. 23, 1922.

what method of feeding do you use—

trust -to- luck *or* trust -to- cluck

THE difference between a poor-paying flock and a profit-paying flock is the difference between take-chances and take-NO-chances. Indifferent, haphazard, "trust-to-luck" feeding will never pay. It can't! Nothing will rob you of your rightful profits as quickly as blind feeding. True, your hens may live and be fairly healthy on a poor ration. But—

You are in the poultry business to make money. The more eggs you get the more money you net. You must realize, then, that it takes an excessive amount of a hen's energy to convert poor feed into money as against converting good feed into money. So that—far from saving money—the only result of a "cheap" ration is a *higher cost* for each dozen eggs produced.

A tasty, well-balanced ration is absolutely necessary for maximum production—that's sure! Equally sure is the fact that a uniform, quality-feed like SURELAY pays its way—and more! Its slight added cost comes back to you many times over in the extra eggs produced.

Have you ever compared the results you're getting from "trust-to-luck" feeds with the results other poultrymen are getting from SURELAY? After all, the real profit-point is this: What do your *hens* think of the feed you give them—and what do they do with it?

Why not put this egg-production question squarely up to your hens? Feed them SURELAY—a prime, true-to-test formula that has weathered the years—and let the results speak for the feed and for us. Meanwhile we suggest that you write for your copy of the new, enlarged edition of "Makes Hens Happy." It is the most complete and helpful handbook on poultry husbandry we have ever issued—and it's free. Simply clip the coupon—and mail today!

Farmer Again Has a Place in the Sun

The farmer again has a place in the sun. When most farm prices remained in the dumps in December and the mystical index numbers came out showing that average prices on farm products during that month had lost all of the slight gains made since last June the landscape became black and it looked like a mighty hard winter.

Early in January farm prices began to take an upward trend. Some of them have already reached an altitude which seemed impossible three months ago. Evidently the turn of the year has meant the turn of the tide of deflation so far as agriculture is concerned.

The advance of nearly 50 per cent in the hog market has done most to increase the income of the farmer, revive hope, pay the taxes and the interest on the mortgage and, in places, leave a little for the improvement fund. The time-honored "Nice day" as a morning greeting among farmers can now be replaced by "Ten-dollar hogs."

Even the most rash of the optimists have been outdone by the actual performance of the hog market, which has risen from a Chicago average of $6.60 early in December to $9.85. There was nothing on which to base prediction of such an upturn three months ago, again demonstrating that fact is stranger than fiction.

The packers who were expecting to store away products from $6 and even $5 hogs have been badly defeated in their bear campaign. The winter packing season is in its last days, a period when the supply ordinarily equals only consumption is at hand and their cellars are minus the usual stocks of hog meats and lard to be merchandised in the summer scarcity season.

The number of hogs slaughtered at western packing points since November has fallen about 15 per cent under last year. Shippers have taken a record number to the east, trainloads have been moved toward the Pacific coast and farmers all over the cornbelt have butchered a lot of hogs and sold the meat locally.

The large proportion of barrows in the run is another link in the chain of evidence that hog production has been stimulated and breeding herds increased, which suggests that the handsome profits in making corn into pork will not last indefinitely, but the market has the prospect of several months of prosperity ahead of it before increased production can do damage.

Lambs are gamboling upon a price level nearly 70 per cent higher than last September. The altitude looks dangerous, but there is nothing immediate to smash the market. Profits on lamb feeding this winter should put that phase of the industry back on its feet. With the sheep population on January 1 the smallest reported by the department of agriculture since 1878 there is but little danger of greatly overdoing production for a number of years.

Wool has ceased to be a drug on the market, and buyers are on the anxious seat, with prices showing advances of 50 to 75 per cent and in some cases more.

The stage is set for an advance in the cattle market and unless something goes wrong the curtain will go up soon. Nothing spectacular to correspond with the advances in hogs and lambs is on the program, but a healthy advance that will warm up the cockles of the cattleman's heart.

The latest revisions of estimates upon the world's supply of and demand for wheat practically show a balance between the two, which puts a tremendous level in the hands of any small group of holders. Not over 15 or 20 per cent of the wheat crop is still on the farm, but this fraction has appreciated almost 30 cents a bushel in value since January 1, and further advances are logical.

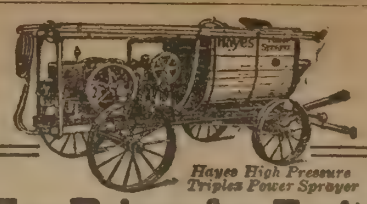
Corn is nearly 10 cents a bushel higher than when the outlook was at its worst. The strength in wheat has helped corn, but realization has evidently set in that corn has been selling below its intrinsic worth and buyers have surrounded the bargain counter, heaped high with the phenomenal receipts of the last month. That such huge quantities were absorbed on an advancing market reveals the profound change that has occurred.

Rye has followed wheat, rather laggardly at times, nevertheless it has followed. Oats have fallen behind the other grains, but events appear to be shaping up for better things there.

Eggs and butter have not done so well, as they have declined sharply from the early December level, but they are on a much higher level than last spring. With trend of prices on other products slanting upward it is possible that the products of the cow and the hen will not dip below a profitable level very long this coming spring, even though production has been stimulated. Furthermore, cheese and chicken prices are holding up well.

Cotton prices are about 70 per cent up from the bottom. They have lost about $25 a bale of the advance attained late last summer, but as a partial effect to this decline, growers have 1,500,000 more bales to sell than were expected at that time.

According to a price chart, a score of farm products were higher on February 10 than when the market was at the bottom in 1921. Two others had advanced entirely too far to show satisfatorily. Onions are 625 per cent higher than the cheapest prices reported last spring and potatoes are 140 per cent higher. Clover seed, timothy seed, cottonseed, broom corn and some grades of tobacco are selling substantially above their low points.



These advances are not enough to pull all of the farmers out of the mire. Financial distress was too severe for that, but the wheels are beginning to move forward and the farmer has been given heart to make the pull.

Candy for Bees

In order to have success with bees it is essential that they have an abundance of feed during the winter months. If too much honey has been taken from them in the fall they are apt to run short during the winter. In such a case it is necessary to feed them with honey or candy, having it before them on a warm afternoon, suggests B. A. Slocum, extension bee specialist of the state college, who gives the following recipe for a good bee feed:

Twelve pounds of granulated sugar, one and one-half pounds of liquid glucose, one and one-quarter quarts of water and one-fourth teaspoonful of cream of tartar. This candy is made by using a good grade of granulated sugar.

The water should be heated and the sugar added only as fast as it will dissolve, in order that it will not be scorched. The glucose may be added before or after the sugar. When the sirup comes to a boil, add the cream of tartar. As soon as the sirup is boiling, remove and stir until thick enough to pour into moulds. To make the moulds, take a standard wire frame and nail a tin board on one side. This board may be removed when the candy is cold. One then has a frame of candy which may be slipped down next to the cluster. By using the amounts above, enough feed can be made to fill two frames.

Good News for Farmers!

The Du Pont Company announces a new farm dynamite—

1/2 more per dollar

DU PONT CHEMICAL ENGINEERS have developed a new dynamite, "Pacific Stumping"—and it will save you a lot of money. It will blow out ½ more stumps per dollar—blast ½ more boulders per dollar—plant ½ more trees per dollar.

Standard stumping powders are packed 85 sticks to the case. For 50 cents more, you can buy a case containing 130 sticks of Pacific Stumping—each stick of which will do equal work with any other stumping powder. This means that Pacific Stumping costs you 2½ cents (or 30%) less per stick.

This new dynamite makes stump blasting in the Northwest a far less expensive operation—and will undoubtedly make possible a great increase in land-clearing activities in this district.

See your local hardware or general store merchant now regarding your season's supply of Pacific Stumping Powder. Write us for booklet, "The Development of Logged-Off Lands," which gives full instructions for its use.

Ask your County Agent how the Federal Farm Loan System will help you clear your land.

As Lambing Time Is at Hand on the Farm

When the Difference Between Profit and Loss Is Quite Largely Determined on the Flock

By C. M. HUBBARD.

The yearly income from the farm flock is determined quite largely at lambing time, because, other factors being equal, the difference between profit and loss depends upon the per cent of lambs saved. If the losses are heavy, the chances of the flock earning a reasonable interest on the investment in them are correspondingly less. To one who has a liking for sheep the hours necessarily spent in the lambing barn at this season are not monotonous and tiresome, but rather a labor of love.

Where the proper amounts of feed and exercise have been furnished the flock during the fall and winter, lambing time should not be a serious problem. If the ewes are neither too fat nor too thin, but are in strong breeding condition, if the exercise has been abundant but gentle, the lambing season should be comparatively easy for the ewes and the attendant as well. If the ewe flock is too fat, together with a lack of exercise, they are likely to lamb with difficulty, giving birth to large, flabby lambs, lacking in vigor and vitality; on the other hand, where the ewes are thin they will usually lamb easily, but have an insufficient milk supply. In either case the flock master's troubles are trebled or quadrupled.

If the flock is in strong breeding condition little, if any, grain is necessary before lambing. Good, clean legume hay should be furnished. Roots or silage should be fed in only limited amounts, as they have a strong tendency to bring on the milk flow a little too early. In cases where the flock is in thin condition oats alone or oats and bran, two and one parts each by weight, should be furnished in addition to the legume hay. From one-half a pound to a pound of the grain mixture should be sufficient.

As lambing time nears, the shed should be kept well bedded. It is wise to have several lambing pens on hand for use as the ewes lamb, especially in the case of twins. These pens should be about four feet by four or six feet, made of one-inch by three-inch or four-inch, and about three feet in height. The space between the lower boards should be narrow enough so that the lamb or lambs can not crawl out. These panels should be hinged together in pairs and fastened to the back wall of the shed, in a series, by means of hooks and eyes. Sheep dip, epsom salts, ginger, soap, syringe, several long-necked bottles and swan-bill nipples should be on hand, as well as vaseline, turpentine and lard. The sheep dip, diluted, is handy for disinfecting purposes. Epsom salts (three

By C. M. HUBBARD

Extension Live Stock Specialist Washington State College

ounces is the ordinary dose), with a touch of ginger, serves as a physic. The soap may be dissolved in water for injection where the young lambs are constipated. The vaseline is essential in case of difficult lambing, the hands being smeared with it before rendering assistance to the ewes. The turpentine and lard are for udder troubles.

Many do not know the symptoms of lambing. Naturally, the parts are enlarged. However, the indications of lambing which occur within a short time of the birth of the lamb, are a "hollowness of the upper flank" and if the hand is placed on the teats it will usually be found that they are full of milk. This is not the case where the ewe has a day or so to run before the lamb arrives. As the hour of birth approaches, she becomes uneasy, bleats, and may seem desirous of owning any other lambs which may be on haud.

When the ewe is giving birth to the lamb she should not be disturbed as long as everything seems to be going well. Often enough, if the flock has been well fed or in the case of certain breeds of sheep, the lambs' heads may be very large. In such cases all that is required is a little gentle manipulation, first being sure the hands are clean, and making use of the vaseline. In other cases both legs may not be forward under the lower jaw of the lamb, as should be the case in normal birth. All that is necessary is to gently push the lamb back into the uterus, carefully bring forward the two front legs, and birth usually follows without further difficulty. Where the hind legs are delivered first, birth should be given quickly, or the lamb will smother to death. Patience and gentleness are prime requisites in cases of wrong presentations.

With the birth normal, the lamb should be able to nurse without assistance. Where the lamb is weak, either the ewe should be turned over on her rump and the lamb assisted to nurse, or she should be backed into a corner and the lamb held up to the teat. When a lamb is chilled or nearly frozen, immersion in a pail of water, as hot as the hand will bear, followed by rapid rubbing with a rough cloth, will often save it.

Often young ewes, and sometimes older ones, will not own their lambs. Such a ewe should be placed in a small pen with her lamb and assistance given the lamb in nursing. Bringing a dog into the pen may arouse the mother instinct of the ewe. Again, milk a little of her milk upon the lamb's rump and put some on her own nose. Often if the ewe is tied up so that she can not bunt and the lamb may suck as it desires, she will soon own it. Where a ewe has lost her lamb and it is desirous that she should raise a twin of another ewe, it is wise to tie the skin of her own dead lamb over the back of the twin for a few days, when little further trouble is usually experienced.

After lambing it may be found that the ewe is giving an insufficient supply of milk. In such cases, especially where there are twins, the grain ration should be increased, feeding from a pound to a pound and a half of grain mixture daily, where one-half pound was fed before lambing. Oats, bran and oil meal (or cotton seed meal), 6-3-1 parts each by weight, make a most acceptable grain ration. Any good legume hay makes a splendid roughage. Grain straws are worse than useless. Not over three pounds of roots or silage daily also promotes the milk flow.

Udder troubles usually follow too heavy a milk flow, although in some cases mechanical injuries of the teats, brought about by the lamb biting while nursing, may cause trouble. In such cases the ewe will refuse to let the lamb nurse, the udder fills with milk and caked bag results. The teat should be examined from time to time and vaseline applied daily to the sores after the ewe has been milked out. This trouble necessitates prompt treatment. Bathing the udder with a solution of epsom salts assists materially. The ration should be radically reduced and a mixture of lard and turpentine applied to the udder and rubbed in well. Painting the udder with tincture of iodine is helpful. Wet bedding or lying on the cold, damp ground may cause "blue bag." Usually when this condition is discovered the ewe is beyond asistance, as the udder has begun to slough off. The lamb should be taken away immediately. This trouble usually takes the best milkers in the flock. Prevention is the treatment. Watch the udders and supply plenty of dry bedding.

Is the lamb well or sick? Watch him when he gets up. If he stretches himself, all is well; if not, something is wrong. Constipation may be, often is, the trouble. A dose of epsom salts to the ewe and the use of the syringe on the lamb (using the soap solution) should remedy the difficulty. When diarrhea is present, cut off any laxative feeds being fed the ewe until the lamb returns to normal.

Last but not least, remember to castrate the ram lambs and dock both ram and ewe lambs at from 7 to 14 days of age. Your season's profits will be the larger, due to the fact that wether lambs fatten more quickly than rams, and that both docked and castrated lambs look more attractive, pleasing and uniform to the buyer, thus bringing a higher market price.

To Preserve the Cooperative Idea

Declared Purpose of Receiver Schreiner of the Washington Hay Growers' Association

Upon the successful management of its receivership by J. F. Schreiner, an Ahtanum member hay grower, who has been in charge of its affairs since January 17, depends the future of the Washington Hay Growers' association.

The situation is not at all hopeless, notwithstanding the facts that the association's liabilities are about $35,000 and its tangible assets only about $7500; that adjustments of claims by customers, resulting from alleged inferiority of shipments, now total around $9000 and demurrage charges as a result of those adjustments around $3000; that the market has been so well supplied the outlook is not rosy, by any means, for sales, and that there has not been so much hay in the Yakima valley at this time of the season for years.

It is true, no doubt, that similar circumstances surrounding any ordinary business undertaking would result swiftly and surely in resort to bankruptcy, and indeed this resort was considered in the case of the late association. But as Senator D. V. Morthland, attorney for the receiver and recognized advocate of cooperative marketing, expressed it: "We are trying to save the cooperative idea, and there is the double problem, in doing so, of helping the growers get the money out of their hay crops and of paying off the creditors of the association. There are about 250 of these, mostly men who delivered hay and received for it only part of its value, or nothing. Our idea in maintaining a receivership is to protect them in further shipments of hay, which they were afraid to make for fear of garnishment.

Protect All Interests.

"The receivership was asked for by outside creditors, and all parties may rest assured that their interests will be protected to the utmost. The receiver can not act without permission of the court, but with the hope, as I said, of saving the cooperative idea, he has been given permission to start suit for collection of accounts due, and to sell hay on a margin of $2 per ton. There are about 15,000 tons of hay available, and this will be sold if a market can be found for it. Whether or not there will be a reorganization of the association I can not say."

The receiver has a desk in the office of the Yakima county farm bureau at the county seat, and is going diligently about the business of checking over the association's accounts. He does not hesitate to point out wherein he thinks mistakes were made, and he seeks to avoid their repetition in his own conduct of the business. He is heart and soul for the cooperative plan of marketing. He believes that it will apply to the marketing of hay better perhaps than to that of any other commodity and that hay growers need it as much or worse than any other class of producers. He has a way of sharing his hopefulness with others that bodes well for the association, and it is significant that he is already converting the doubters and the discouraged into boosters.

"We've got a fine bunch of cooperators left in the association," he assured me. "Two men from Harrah came in the other day to go over the situation, and went away apparently well satisfied. It was only a few days before they were back with reports of demand for the association, and wanting to reorganize in their community at once. I refused to let the members live on promises, however, and counseled them to wait until the time was ripe." Which perhaps is another indication of his ability to handle the difficult situation successfully.

When hay buying started soon after organization in the fall of 1920 payments were made immediately upon delivery to within $1 per ton, the amount reserved for operation. There was no adequate inspection service at either end of the line—this was before the days of satisfactory state inspection—and customers often found fault with the hay they received.

Claims for adjustment began to come in on shipments for which cash had already been paid. These amounted, as stated, to $9000 or more; there was nothing to cause paid-up members to "blow back," and the result was that later shippers received little or nothing for their hay.

In other words, the association handled 23,000 tons of hay at a cost of $2 or $2.25 per ton, when only $1 per ton had been reserved for that purpose. When the association was first formed the 54,000 tons which its 550 members contracted to sell appeared to be a controlling factor in the disposal of 80,000 to 100,000 tons grown in the valley. If it had reserved $2 or $2.25 instead of $1 for handling there would have been no deficit, it is claimed, but $54.000 looked like more money than it really was, and the full amount was spent in marketing about 23,000 tons.

"The association's predicament is due to mistakes, as I see it," said Receiver Schreiner, "but there is palliation for mistakes in the fact that the management was without cooperative marketing experience and had no precedents to follow. The farm bureau had not been organized, hence had nothing to do with it; the state cooperative marketing law was yet to be passed. The first mistake was perhaps in using contracts that were not absolutely binding. Members had the privilege, by paying a penalty, of selling their hay outside the association, and many of them did that. There was a big mistake in selling each individual's hay direct instead of

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

President Harding Approves the Cooperative Marketing Bill

After several years of persistent appeal by farm organizations, congress has passed and President Harding approved the Capper-Volstead cooperative marketing bill. The house bill was accepted by the senate by a vote of 58 to 1.

The American Farm Bureau Federation pronounces this "the greatest victory of the agricultural bloc, the American Farm Bureau Federation and the other farm organizations which have supported it. The new law will make possible the fullest development of the farm bureau's cooperative marketing program."

The gist of this important measure is found in section 1 as follows:

That persons engaged in the production of agricultural products as farmers, planters, ranchmen, dairymen, nut or fruit growers may act together in associations, corporate or otherwise, with or without capital stock, in collectively processing, preparing for market, handling and marketing in interstate and foreign commerce, such products of persons so engaged. Such associations may have marketing agencies in common, and such associations and their members may make the necessary contracts and agreements to effect such purposes: Provided, however, that such associations are operated for the mutual benefit of the members thereof, as such producers, and conform to one or both of the following requirements:

First. That no member of the association is allowed more than one vote because of the amount of stock or membership capital he may own therein, or,

Second. That the association does not pay dividends on stock or membership capital in excess of 8 per centum per annum.

And in any case to the following:

Third. That the association shall not deal in the products of nonmembers to an amount greater in value than such as are handled by it for members.

Opponents of the bill contended that it was unfair, as it allowed an exclusive privilege to farmers to engage in monopoly. That objection was met by section 2, which gives the secretary of agriculture authority to proceed against associations which monopolize or restrain trade to such an extent as to enhance prices unduly. United States district courts are given jurisdiction in case of appeals from orders of the secretary of agriculture, who has authority to direct associations to cease and desist from monopolization or restraint of trade.

Notwithstanding this restraining provision, which seems fair and sufficient, the new law is severely attacked by some newspapers, particularly by grain trade journals. One of these journals calls it an example of "sycophant law-making." Senator King of Rhode Island, the one senator who opposed the measure, said it only added one more act to "the existing deluge of ill-digested and half-baked laws already so numerous on the statute books that, as Herbert Spencer more than a half a century ago said, 'it is no longer a disgrace for a judge not to know the law.'"

We quote these extremes as indicative of the bitter opposition to this measure. But the fact that it was supported by 58 senators, with only one dissenting voice, seems conclusive that it appeals to the senators not only as advisable, but as reasonable and just. It is foolish to say that this bill would not have been passed if it had not been for the agricultural bloc in the senate, for that bloc numbers fewer than 25 senators, when the record shows that 58 voted for it.

It is true that the law just passed puts agriculture upon a slightly different footing from some other industries, but there are strong justifying reasons for that preferential action. Economists generally agree that it is practically impossible to monopolize farm products, or for cooperative associations unduly to enhance prices.

Another justifying reason is the one advanced by Mr. Hughes, now secretary of state, when he argued before the United States supreme court for the constitutionality of the exemption of federal farm loan bonds from taxation. Mr. Hughes argued, and the supreme court sustained his view, that the food supply of the nation was so vital to its very existence that it was justifiable in the national welfare for congress to give special consideration to that industry.

In other words, it is not a question of legislating merely for the benefit of the farmer, but whether it is wise to pass such legislation for the benefit of the nation.

The Capper-Volstead cooperative marketing bill should be weighed in all its aspects and judged by its actual effect upon the people. If, by and large, it should be found injurious to the public, the fact that the farmers wanted it would not justify its enactment. On the other hand, if it shall tend toward the reasonable prosperity of agriculture and thus contribute to an assured food supply for the people, it is justifiable and congress and the president are to be approved for its enactment.

At all events, the new law should be given a fair trial, and we believe a very large majority of the people will pronounce it, after it has had full trial, both fair and beneficial. If, on the other hand, it should be found to be oppressive, we do not doubt that the farmers of this country would be among the first to assent to its repeal or modification.

Our own belief is that it will stand the test of time, that it will prove to be immensely beneficial to cooperative production and that it will tend to give the public more and better food supplies and stabilized prices, which in the long run will prove to be a real saving to the consumers.

Popularizing Purebred Sires.

Millions of dollars are being lost annually through the use of scrub sires. Many of the rank and file of the producers of market stock have not yet been "sold" to the idea of the extra dollars available through the use of high class registered sires. Farmers still persist in following the lines of least resistance.

This is the problem—how is it to be met? It may be stated right here that it is up to the breeders. They are the ones to put the work across. We hear the answer that they have been doing it for years. They have been breeding good stock; they have been breeding, feeding and advertising and showing good stock for decades. Our breeders have been doing a wonderful work in developing live stock. Our breed associations have performed a splendid service in building up the quality of their breeds, but those who should be reached are the farmers and stockmen who have never used a registered bull, boar or ram. These are the men who must be made to realize the value of the good purebred sire in making their harvest more abundant and certain.

The breeders of purebreds realize more and more that they are in the business not only for their own gain, but for the good they may do their fellow farmers and stockmen. Their work is of the nature of a public servant. They are breeding purebred horses, cattle, sheep and swine for the good of the countryside, for the good of their fellows as well as themselves.

The question is, how can the breeders, the breed associations and the various agricultural extension agencies reach the users of scrub sires with a gospel of "Why scrub sires must go?" The next question concerning us is how to get rid of the scrubs and how to replace them. Progressive breeders and breed associations see the handwriting on the wall, they must spend of their own valuable time in furthering the elimination of "the most expensive sire in the world;" they must assist in carrying the story of the superior merits of the good purebred sire into the various communities of each county; relating their own experiences in this connection in order to "sell" the purebred sire idea to their hearers. They must work together as breeders, as associations in studying these methods and in executing these means and methods to the end that the most efficient sire, the good purebred sire, may be placed on those farms which have not yet felt his beneficial influence.

State Farm News

The annual Cowlitz county fair will be held Wednesday, Thursday, Friday and Saturday, September 27-30, the board of county commissioners has decided. Premium lists are now being prepared. Joseph Gardner, county superintendent; T. Y. Blanton, county agent, and Miss Nora Kelly, county club leader, are revising the premiums and classifications in their departments. Mrs. C. C. Ruckles, Kalama; Mrs. B. M. Atkins, Kelso; Mrs. P. A. Parker and Mrs. Loring of Castle Rock and Mrs. Mills of Woodland are also assisting with preparation of the premium lists.

* * *

C. P. and Earl Boyer of Porter have purchased a young purebred Jersey bull from J. H. Taylor of the Wynooche valley and will discard all their grade sires. The bull is a half-brother of the cow that was grand champion at the Elma fair last year.

* * *

The Hub Guernsey Calf club of Ferndale, Whatcom county, held its first calf show early in January. The awards went to the following boys: Floyd Kinley, first; Billy Kellman, second, and Ted Plaster, third.

E. W. West of the Ferndale creamery judged the animals, while H. B. Carroll Jr. and F. L. Audrain assisted the boys in staging the show.

* * *

More than 4500 head of dairy cows have been tested for tuberculosis in the vicinity of Enumclaw by the dairy and live stock division of the state department of agriculture. These cattle comprise practically all the herds that supply the local creamery.

* * *

The Skamokawa Farmers' Cooperative association, a cooperative concern which has been doing business for 27 years, made 245,700 pounds of butter in 1921. The newly elected trustees of the association are: M. S. Hougen, Gordon G. Wiest, Peter Johnson, W. J. Strong, J. A. Martin, Theodore Anderson and Emil C. Martin. The officers are: President, M. S. Hougen; vice president, Gordon G. Wiest; secretary, Emil C. Martin; treasurer, W. J. Strong. George M. Grant, for three years past buttermaker of the creamery, was retained.

* * *

An amendment to the alfalfa weevil quarantine has just been added which curtails the shipment of alfalfa meal from counties where the alfala weevil is prevalent as mentioned in the previous quarantine order on baled hay. The order is signed by E. L. French, state director of agriculture, who stated that there is no immediate danger of the spread of the pest, but the people can not afford to take any chances.

* * *

J. Propstra, formerly owner of the Vancouver creamery at Twentieth and Main streets, announced February 12 he will open another creamery at Vancouver March 1 in the Coast Tinning company's block. The creamery will be called the Holland and the plant will have a capacity of a ton of butter daily. It will require seven men to operate the plant. Mr. Propstra sold his interest in the Vancouver creamery and took a trip to the old country for several months.

* * *

The Lewis County Cow Testing association was organized in Chehalis on February 4, starting with 373 cows in Lewis county. Testing began February 10, an official tester having been hired. E. A. Donaldson was elected president of the organization, Carl Taylor vice president and A. T. Flagg secretary. These officials, with A. Adolphsen and Chris Hendrickesen, comprise the board of trustees.

* * *

Klickitat wool growers are making arrangements to pool their wool at Portland, where it will be stored and graded. Led by the example of Idaho wool growers a committee of five from the Klickitat County Wool Growers' association went to Portland to make arrangements for storage facilities for 300,000 pounds, which will represent the 1922 clip. The committee consisted of John Jackel, president of the association; Dr. H. H. Hartley, R. A. Jackson, Manuel Lenardo and J. D. Akins. Some of these were at the state wool growers' convention, which met here last month. While Seattle offered Yakima valley growers similar facilities, the sentiment seems to favor storing at Portland and it is likely that a Yakima delegation will be sent to Portland on a similar errand soon.

Coming Events of Interest

March 4—Pioneer reunion, Bucoda.
March 7—Holstein-Friesian Ass'n meet, Seattle.
Mar. 8—F. Sinnes Berkshire sale, Prosser.
March 9—Stevens county live stock sale, Chewelah.
Mar. 22—Shorthorn consignment sale, Portland.
April 5—Pierce county poultry meet.
July 27-28—Whatcom co. Guernsey gallop, Bellingham.
April 16—Easter.
June 7-9—Union live stock show, Union, Ore.

FARM BUSINESS AND MARKETS OUTLOOK

WHO MADE MONEY IN MEAT IN 1921?

There were few live stock producers who made a profit on their year's farming operations in 1921, especially if a minimum wage were allowed for the labor and managing ability of the farmer or the labor of members of his family. Those who can show a moderate profit for the year are more than offset by the larger number whose losses were severe, so that the live stock industry as a whole would show a loss.

Four of the large meat packers have issued their annual reports for the year ending October 31, 1921. All of them lost on the year's operations, the aggregate loss being over $52,000,000. Of course, the employees and managers received their wages and salaries, although some reductions were made and enough was left from profits during war years to pay part of the annual dividends on the capital stock of the companies.

Now comes a report upon a survey of cost of selling meat through retail stores in 1921, made by the bureau of markets and crop estimates. Complete accounts of 440 stores in 30 cities were included in the survey. It was found that the retailers made a net profit of 2.29 cents on the average on each dollar of sales in contrast with the loss suffered by the packing industry and severe losses on the part of live stock producers. This profit, of course, was the amount left after salaries, wages, rent, ice and refrigeration, wrappings, heat, light, power, interest and miscellaneous expenses were paid. Here alone money was made in handling meat in 1921.

CATTLE READY FOR UPTURN

Although receipts of cattle at the seven leading markets are running ahead of the average for this season of the year, they have decreased about 15 per cent in the last three weeks when compared with the three weeks preceding.

Besides a lighter supply, demand for stockers and feeders has broadened and has withdrawn a larger fraction of the total, so that the supply of beef has been cut down.

The wholesale price of beef is down to the 1914 level and its cheapness, compared with other meats, has begun to attract attention of consumers.

Cattle values advanced slightly and the activity of buyers has increased sufficiently to suggest that the long expected turn for the better in the steer market is not far away. The Pacific coast section is drawing upon Kansas City and Texas markets for its beef supply. Any advance in prices may be irregular, but the prospect appears stronger than at any time in the last 60 days.

Texas advices point to a light supply of Texas grass beef, so that butcher cows and heifers should respond proportionately to any advance in the steer market. Cutters and canners have been relatively high compared to other classes, so that readjustment in this division is probable.

High prices for veals have attracted an early run of calves. A sharp downward trend will begin soon, to endure until the spring avalanche from dairy districts is over.

STOCKERMEN ARE ACTIVE.

Shipments of stockers and feeders from the leading markets are running far ahead of the same period a year ago and are practieally equal to the movement of two years ago. Shipments of thin cattle from Kansas City during February are expected to set a new record. It is possible that too many cattle will be placed on short feed for the late spring market, but thus far feed lots do not seem to have been filled to the danger point. In Kansas and Oklahoma cattlemen are bargaining for cattle and for grass and the northwest movement is expected to be heavy, but only a few transactions have been closed thus farm. Buyers from Montana, Dakota and Nebraska are canvassing Texas in an effort to locate a supply to move into the northwest.

HOG MARKET AVIATES.

The advance in the hog market is still unchecked. The top price at Chicago has reached $10.65, with the average above $10. No sustained increase in market receipts has followed the payment of higher prices. Demand for hog products has increased in the east and storage stocks of meats and lard at Chicago decreased in the first half of February, whereas a substantial increase is normal for this season of the year. Stocks of meat and lard for the entire United States increased only half as much during January as during January, 1921.

The government's report showing a larger number of hogs on farms on January 1 than were there a year previously may have some bearing upon the course of the market later in the year. There is nothing to indicate a loss of strength in the next few weeks.

LAMBS AT $16.15.

Lambs sold for $16.15 at Chieago during the last week and established a new high since July, 1920. High prices for wool have made a wide spread on shorn and wooled stock. The lamb market has advanced at a much more rapid rate and to a greater height than the decrease in market receipts would seem to justify. Nevertheless, there is nothing to indicate an early change. Over 200,000 head of Texas lambs have been moved into the corn belt for fattening and have been fed upon the market gradually, otherwise still higher prices might have occurred. At the same time the supply to be marketed during the spring months has been cut down by an equivalent amount. Shipments of feeder lambs are running about three times as large as at this time a year ago, but somewhat lighter than two years ago. The total sheep population is too small to develop any fear of overproduction for a long while.

CITY BUYERS OUT OF HORSE MARKET.

Although farm chunk trade from the eastern states is picking up, there is no urgent buying and receipts have enlarged sufficiently to keep the market relatively weak.

UNCLE SAM QUITS WOOL BUSINESS.

With the sale of 4,000,000 pounds of wool on March 2 the government will have completed liquidation of its holdings carried over from war times. Wool growers are in an exceedingly strong position, although the advance in prices has already discounted most of the strength. As high as 39 cents is said to have been offered for a choice Montana clip. Demand at the leading markets has fallen off in the last week and some of the lower grades are slightly weaker in price. At the last British and Australian auctions values declined 5 to 10 per cent.

ALL GRAINS AT HIGH POINT

Led by the advance in the wheat market, which has reached the highest level attained since last June, other grain prices have rallied sharpiy during the last week to the highest prices during the present crop year. The close adjustment of the world's supply of and demand for wheat has been the foundation for the advance. This has attracted an enormous increase in the amount of speculative buying on the grain exchanges.

The official figures show 211,000,000 bushels of wheat, corn and oats, rye and barley in the visible supply in the United States and Canada and there are around 40,000,000 bushels more of corn on track and in transit. Practically all of this grain is hedged in the speculative markets, so that prices have advanced in spite of the fact that a heavy load had to be carried.

Foreign markets, especially Liverpool, have been advancing even more rapidly than the market in this country. Foreign consumers have taken alarm after allowing their stocks to run low in anticipation that Argentine and Australian crops would be sold at sacrifice prices.

WHEAT MARKET MAKES BIG SWINGS.

Barring minor fluctuations, the wheat market maintained an upward trend from July 1 up to September 10. From that date until early January prices were weak and depressed most of the time. In the last six weeks a pronounced upward swing has occurred. All of these changes have been paralleled by changes in the world's outlook for a supply of bread.

At the beginning of the crop year the exportable surplus of the various countries was estimated at around 700,000,000 bushels, while the requirements of importing countries were placed at around 600,000,000 bushels. Some estimates showed an even wider margin.

Drouth in Europe caused the grain trade to anticipate an extremely active export demand for wheat and enormous quantities were sent abroad in the first three months after harvest, causing the upturn in values which culminated on September 10. This advance occurred in spite of an exceptionally rapid movement of wheat from farms to primary markets.

In the latter half of September it developed that European demand was insufficient to absorb immediately all of the wheat consigned abroad and prices declined precipitately when concessions began to be made in order to dispose of this unsold wheat. The Canadian crop estimate was raised, official reports on the wheat reserve on farms on October 1 were unexpectedly large, and European buyers began to sit back and wait for the movement from Australia and Argentina. They expected that pressure from these countries and Canada would furnish them a supply of cheap wheat.

TABLES TURNED ON BUYERS.

These expectations were not realized. The Canadian crop moved more slowly than was anticipated. Shipments from Argentina have increased rapidly in the last few weeks, but are only two-thirds as large as expected by foreign buyers and extreme pressure to sell has not been manifest much of the time.

Estimated surpluses and import requirements have been gradually revised until the 100,000,000 bushels margin believed to exist at the beginning of the crop year has practically disappeared. The Canadian crop was reduced by 30,000,000 bushels, both the Australian and Argentine crop estimates were cut down and the unofficial reports recently issued upon farm holdings of wheat in the United States indicate a smaller reserve than was expected.

At the same time non-European countries have been taking much more wheat than they usually do, so that the total requirements of importing countries have been increased. If the disappearance of wheat in the world's movement during the rest of the crop year remains at the same rate as it has been thus far, the total increase will be about 50,000,000 bushels.

The carry-over in the wheat surplus countries at the end of the last crop year was about 100,000,000 bushels more than normal. This extra carry-over, as well as this extra carry-over, is expected to disappear into consumption before the present crop year is out.

If this possibility is realized increased production will be necessary during tthe coming crop year in order to supply the world's demand. It is this angle of the situation which makes the low condition of new winter wheat in the southwest such an extremely serious matter. No relief has arrived in that section thus far and growing weather can be expected soon, which will be followed by numerous damage reports.

RECORD CORN MOVEMENT CONTINUES:

Aside from the advance in prices into new high ground, the corn market developed no new features during the last week.

CASH GRAIN MARKETS.

The range of cash grain prices for the week ending February 21 was:

CHICAGO—Wheat—No. 2 red, $1.36 1-4@1.42 1-2; No. 3, $1.33@1.40 1-2; No. 3, $1.29 1-2@1.34 1-2.

Corn—No. 2 mixed, 54 3-4@59c; No. 3, 53 1-4@57 1-2c; No. 4, 51 1-4@55c; No. 2 yellow, 56 1-4@59 1-2c; No. 3, 53 1-2@57 1-2c; No. 4, 50 1-2@55 1-2c; No. 2 white, 55@59 1-2c; No. 3, 53 1-2@57 1-2c; No. 4, 51@55 1-2c.

Oats—No. 2 white, 38 3-4@44c; No. 3, 34 3-4@39c; No. 4, 33 1-2@36 3-4c.

Rye—99 1-2c@$1.04 1-2.

Barley—55@68c.

CLOVER AND GRASS SEED STRONG.

Prices upon all kinds of legume seed are gradually working higher. The advance in red clover led the way, but demand is now being diverted to alsike, sweet clover and alfalfa. Since the spring demand is not yet at high tide, the market promises to rise still further.

FEED MARKETS WEAKEN.

Offerings of wheat feeds for March and April shipments are much more liberal than for prompt shipment. Flour mill operations have increased, so that larger quantities of wheat feeds are being produced and mills have been offering eagerly for March and April shipment. Warehouse stocks are fairly large. Cottonseed mills have 30,000 tons more of cake and meal on hand than at this time last year. Practically all feeds are quoted materially higher than at this time in 1921. Buyers began to hold back when feeds and oil meals advanced to the highest levels of the season.

CHICAGO—Bran, $28; standard middlings, $23.50; flour middlings, $31; hominy feed, $22.50; gluten feed, $32.15; cottonseed meal, 36 per cent, $42.50; 43 per cent, $47; tankage, $55; oil meal, $51.

HAY MARKETS TURN STRONGER.

Under lighter receipts and improved demand, hay markets have turned stronger. Prices are moving over a narrow range. The supply of low quality hay is excessive.

CHICAGO—Timothy, No. 1, $22@23; No. 2, $19@20; No. 3, $15@18; No. 1 clover mixed, $18@19; sample and threshed hay, $10@16; No. 1 clover, $17@18; alfalfa, $15@25; Nebraska and North Dakota prairie, $12@16; rye straw, $13@14; oat straw, $11@12; wheat straw, $10@11.

EGG MARKET TRENDING LOWER

The egg market had a hard fall during the last week and opinion in the trade is unanimous that lower prices are on the horizon. Holders are inclined to push sales at concessions if necessary, while buyers are filling only their most pressing needs, expecting to be able to purchase cheaper later on. Quotations on eggs for March and April delivery are considerably below current prices.

A year ago at this time the spring increase in production was already quite marked, so that receipts at the four leading cities at the present time are running lighter than they were last year. The supply during January ran considerably ahead of January, 1921, but February receipts have fallen behind more than enough to offset the January gain, so that the total for the year to date is lighter than in the corresponding period of 1921.

BUTTER MARKETS CAUTIOUS.

Butter dealers are operating on a cautious basis as they expect lower prices later on. Production has begun to increase again and there is a liberal supply of cold storage butter which holders are pushing on the market as fast as it can be absorbed. Butter from sections which had been shipping to eastern markets was diverted so that the leading cities were restored to a normal parity. Some New Zealand and Australian butter is said to be afloat for San Francisco, but no Danish was purchased during the last week, as quotations on that market were above an import basis. The southern hemisphere is past the flush season and the English market is firmer recently and is absorbing more of the foreign offerings.

CHEESE MARKETS SENSITIVE.

Cheese markets have been in a sensitive state during the last week, with prices ready to move either way, according to developments.

FRUITS AND VEGETABLES.

According to a report just made public by the bureau of markets, stocks of potatoes on hand on January 1 were 144,042,000 bushels, compared with 145,286,000 bushels a year ago. Of the holdings, 20,434,000 bushels were in Maine, 14,514,000 bushels in New York, 13,752,000 bushels in Wisconsin, 12,811,000 bushels in Michigan, 11,698,000 bushels in Minnesota and 6,570,000 bushels in Colorado. It will take only 24,000 carloads after February 11 to bring the total shipments for the present season from the leading states up to the total for the 1920-1921 season. New potatoes are already being seeded in extreme southern states. Most markets have been steady recently. Growers are receiving 90c to $1 per 100 pounds for Rurals in Colorado and Idaho. Northern whites are bringing $1.70 to $2 in Chicago.

Cold storage holdings of apples on February 1 were 1,422,000 barrels, compared with 3,016,000 barrels last year and a five-year average of 2,232,000 barrels. Boxed apple holdings were 8,645,000 boxes, compared with 6,268,000 boxes a year ago and a five-year average of 5,360,000 boxes. Total holdings converted to barrels are slightly larger than the five-year average on February 1. The boxed apple movement has run 61 per cent ahead of that of last year, while the barreled apple movement shows a 60 per cent decrease.

Baldwins are quoted at $7.50 to $8.25 in Chicago. Extra fancy northwestern Spitzenburgs and Jonathans are bringing $3 to $3.75 per box in the same market.

Successful Marketing of Dairy Products

By J. A. SCOLLARD

President of United Dairy Association of Washington

Prior to the organization of the United Dairy Association of Washington on their present plan, approximately 50 per cent of the milk produced in this state found its way into tin cans in the form of evaporated milk.

J. A. Scollard.

When it is understood that the percentage of the total milk produced in the United States in canned milk has never reached 5 per cent, and when you take into consideration the fact that in the process of evaporation the finished product weighs approximately 50 per cent of the weight of the raw material, the significance of these two facts will immediately impress you. In addition, when you know that but a comparatively small percentage of the canned article was consumed locally and that the balance bore a heavy freight rate to the consuming centers of the east and middle west, you will grasp the fundamental reasons for the forming of these associations and the necessity of the introduction of a more flexible system.

It should be borne in mind that a practical monopoly was held by one of the large corporations in the districts of heavy milk production; that the plants which this company had established were built and equipped solely for the purpose of canning milk, a rigid system with no facilities for turning the raw material into other products, when the canned milk market was unduly depressed or the outlet for it was completely closed.

I might say here that canned milk is the most erratic of all manufactured dairy products; it is either a feast or a famine with the manufacturers of these products practically all of the time, and certainly it is the least dependable product from the standpoint of the producer, who must needs have something in the nature of a stable market for his product, which is one of daily production.

By way of further illustration of the disadvantages of surplus milk, in canned form, as against other dairy products, when these products must take freight shipment, I need only point to the fact that a case of milk ready for shipment, representing 100 pounds of whole milk, weighs 65 pounds; that cheese from 100 pounds of milk weighs not to exceed 11 pounds; that the butter from 100 pounds of milk, of average test, would weigh only 4 pounds, and that the weight of the dry or powdered skim milk from 100 pounds would average about 8½ pounds.

With these comparisons in mind, you will conclude, as we did, that since we were producing more canned milk than could be consumed here and at the same time were importing butter, cheese and other more highly concentrated dairy products, that the situation was badly in need of adjustment.

So long as the dairymen were satisfied to supply condensers at the prices which the latter were willing to fix the situation of the manufacturer was highly satisfactory, for, by quoting a lower price here than was paid at the company's plants in the middle west and east, the producer could be and was made to absorb freight and other charges, and thus this wrongful economic situation was being perpetuated.

It was the knowledge of these conditions and the expressed unwillingness on the part of the corporation which held the field to cooperate with the dairymen in working out a solution which resulted in the determination on the part of the dairymen to form an organization on cooperative lines to cope with the situation. This determination was reached a little over three years ago. At that time several loosely organized county or district associations existed, but in most of the western counties no organization of dairymen, worthy of the name, was functioning.

The first need, therefore, was to establish associations in every heavy milk producing district upon some uniform plan.

After studying the organization plans of a number of dairymen's associations in other fields, we decided to organize along lines similar to those under which the California dairymen had organized, and this was done.

Six County Associations.

Our association, as it now exists, is composed of six county associations with an aggregate membership of about 6000. These county associations have a strong contract with each dairyman member by which he agrees to sell all of his milk or cream through the association, the association agreeing to find the best possible market for it.

The county association has in turn a contract with the United Dairy Association of Washington, making the latter its sales agent for all its surplus finished product. The contract also permits the United Dairy Association of Washington to prescribe the selling territory of the county association and to have complete supervision of their plants for the purpose of standardizing the whole output of all of the factories.

The state association, therefore, has virtual control of the county units by virtue of this contract with them.

The county associations are all organized on a non-profit basis, with capital stock varying according to the number of dairy cows in the respective districts, but always on the basis of one share of stock for each cow owned by the member, at $10 per share. Each member is entitled to one vote only, regardless of the amount of stock held by him.

After the canvass for membership was concluded in all of the counties, plans were laid for constructing plants of sufficient capacity, in each county, to take care of the milk of its members. After numerous conferences in which representatives from all county associations participated, an acceptable construction program was outlined. Most of the plants, under this program, were built so as to permit the manufacture of any one of several dairy products as the demand for it seemed to warrant. These are referred to as utility plants.

$1,500,000 in Plants.

The total value of the plants owned by the association is approximately $1,500,000. The capital stock of the association was entirely inadequate to finance the building of these plants and first mortgage bonds were issued in amounts necessary to cover the cost of construction and equipment. These bonds were sold almost entirely to dairymen members of the association.

We now have in operation seven plants which can be properly called major plants, and three minor plants. The major plants have a combined rated capacity of 750,000 pounds of whole milk daily, but are capable of taking care of 1,000,000 pounds of milk daily during the peak of the surplus period. These plants are modern and efficient and, with the exception of one acquired by purchase, are newly constructed. The three minor plants represent a total investment of about $70,000—two are cheese factories and one a milk distributing depot and small dairy products factory.

The association plants are located as follows: Lynden, Bellingham, Burlington, Mt. Vernon, Arlington, Snohomish and Chehalis. All of these are major plants. The minor plants are located at Menlo, Satsop and Aberdeen.

The total output of these plants, during 1921, reached approximately $5,500,000, and we anticipate an output with a money value of about $8,500,000 in 1922.

We are basing these calculations on the fact that three of our larger plants were not ready to operate until after the 1st of April, 1921. The Chehalis plant did not begin receiving milk until almost May 1; the Lynden plant about June 1, and the Burlington plant not until August of last year.

Of the total sales, over $3,000,000 was disposed of under the contract with the United Dairy Association of Washington, the balance being sold locally by the county associations. The ratio of sales through the state association will be greatly increased in 1922, while the local sales will presumably increase in but a small degree. It is safe to assume that the local sales will not exceed $3,000,000 in 1922, while the sales through the central sales organization can reasonably be expected to exceed $5,000,000.

Plan of Organization.

The United Dairy Association of Washington is made up of one representative from each county association; its nominal capital stock is $100, made up of 20 shares at $5 per share. This association had no money with which to undertake the marketing of such a vast quantity of product in a manner that would admit of payment to the producer for his milk on a monthly basis; the directors realized that to open up markets and successfully dispose of the immense output of the association plants would require men of experience as well as the necessary capital.

They, therefore, caused to be formed, the Consolidated Dairy Products company. This company had paid up capital of $250,000 and was organized for the sole purpose of selling association products. The basis of its formation was a contract with the United Dairy Association of Washington whereby the latter was to sell through it the association products not disposed of locally.

A rigid investigation of the selling costs of various dairy products was made by the United Dairy Association of Washington and the commission on sales by the Consolidated Dairy Products company were based on the results of this selling cost investigation. The contract between the United Dairy Association of Washington and the Consolidated Dairy Products company is for one year and contains three salient features which fully protect the association.

First, the contract can be terminated by either party on 60 days' notice and the association has the option of buying, at cost less depreciation, the distributing machinery of the Consolidated Dairy Products company in the event the contract is terminated.

Second, the association fixes the selling prices of all commodities sold.

Third, commissions, as fixed by the contract, are subject to revision whenever it becomes apparent that they are out of line with actual selling costs.

The contract further provides that the United Dairy Association of Washington shall have one of its members on the board of directors of the Consolidated Dairy Products company with access to all records. A monthly statement of all sales and transactions is rendered to the association.

Selling System.

The present system of sales is conducted as follows: All sales of canned milk in western Washington are made direct to the retailer. In eastern Washington, Montana and Idaho the distribution of all commodities is made through jobbers, shipments being made in carload lots. The selling organization, however, maintains salesmen who cover these fields. The Consolidated Dairy Products company has a branch in Tacoma and active sales agencies in Portland and Los Angeles, a branch selling agency will be established in San Francisco this year, and we are now entering into arrangements with California dairymen's associations to supply them with canned milk, a commodity which they do not manufacture.

Practically all of our butter and cheese, with the exception of what is disposed of locally, is sold in Seattle; the former in cubes. Considerable quantity, however, goes to Alaska where we are rapidly winning favor in that market with the excellent flavor and keeping qualities of our butter.

Seattle Plant in Prospect.

We expect, in the near future, to establish a plant in Seattle especially for butter handling and distribution under the "Darigold" label. This will greatly add to our strength and prestige in that great consuming center and put us in a position to have more to say in connection with butterfat quotations, and enable us to further protect the dairymen against unwarranted declines. All of the butter disposed of by us on the Seattle market has brought us a premium over other butters by reason of its high standard, and because of our ability to constantly assure the required volume of uniformly high class butter.

Our cheese, with the brand lettered on the rim, is rapidly displacing Tillamook in this territory, and we have practically shut out Wisconsin made cheese. Our entire cheese output is of uniformly high quality as a result of the strict standardization methods enforced in all of our plants.

Output of Milk Powder.

Our immense output of milk powder, packed in 200-pound barrels, is largely consumed by the baking industry to which we have access through the largest bakery supply house in the United States. We recently contracted with this concern for the sale of 50 carloads of 60,000 pounds each, for delivery between now and August 1, 1922. Our dealings with this concern, which handled our last year's output, are eminently satisfactory. The 50 carloads, above mentioned, amounting to about 3,000,000 pounds, will consume our surplus make until August 1, 1922.

We are supplying practically all of the skim milk powder now used by Washington buyers, but the great bulk of this product is distributed in large and small lots in practically every state in the Union, as well as in the export trade. We have demonstrated the superiority of milk powder made from Washington milk over all others.

I believe this about covers the field of our operations. We are not involved directly, to any great extent, in the distribution or sale of city milk, although three of our county associations supply distributors in certain cities of their districts and have greatly benefited the dairymen by their activities.

Seattle Milk Distributors.

I might also say that the United Dairy Association of Washington practically fathered the Seattle Milk Shippers' association, which has been instrumental in putting the Seattle milk situation in its present favorable condition. This organization, which our association was instrumental in forming about a year ago, now sells 90 per cent of the milk supplied to Seattle distributors. It has a large part in the establishment of the retail consumer's price in that city as well as the price paid to its members. The present price for 3.6 per cent milk in Seattle is $2.50 per hundredweight for February and March. The Seattle Milk Shippers' association does not manufacture dairy products, and consequently the United Dairy Association of Washington can not directly render them the selling service. The shippers' association, however, is closely affiliated with the United Dairy Association of Washington and cooperates with it very closely.

In summing up the operations of the United Dairy Association of Washington for the year 1921, I believe we can, with modesty, claim to have attained success. Beyond a doubt, the year 1921 was the worst year in the history of business in America, yet in that year we accomplished the following:

1. Operated every association plant full time without a skip, including Sundays and holidays.
2. Met every payroll for labor or milk with full payment on the regularly designated pay day.
3. Successfully marketed and collected for the immense and varied output of all of our factories, developing local, eastern and even foreign markets for Darigold products.
4. Through standardization and efficient handling of products established a record for quality of butter, cheese, evaporated milk and milk powder unequaled by its oldest and largest competitors.
5. Not only met fully every interest obligation on association bonds when due, but retired a considerable portion of their bond issue.
6. Enjoyed the loyalty and complete cooperation of over 5500 dairymen, from whose ranks less than 1 per cent deserted.

We did this in our first year against competition that was ingeniously directed against us in a manner clearly intended to put us out of business. Our chief competitor for raw milk (perhaps 'opponent' would be the more proper term) quoted

(Continued on page thirty.)

If you will grant that our county dairy associations included in the United Dairy Association of Washington have been successful, and if you were to ask what thing contributed most to that success, I would say that the several most important factors were:

1. Our determination to turn out products of the highest quality. We have carried out this policy, which was made possible by strict methods of standardization in modern, well-equipped plants.

2. The fact that we organized and built plants in all of the counties simultaneously, making it possible to present a solid front all along the line, thus withstanding the onslaught of our vindictive enemies. It is safe to say that operating on a separate unit not one of our associations would have survived the year.

3. The decision of our directors to enlist sufficient private capital and experienced, competent men in our marketing program. Our associations would not be in existence today had we adopted pooling or other plans and failed to pay the dairymen fully for their milk once each month. We have never regretted this decision.

4. Last, but not least, the splendid loyalty and morale of our membership in almost completely cooperating in every way. The earnest and capable men who formed the leadership of the county associations were responsible for this spirit and their own sacrifices of time and effort gave the members confidence and strength in supporting their policies.

These factors may not have been set down in the order of their importance, but without each and all of them the measure of success which we have attained could not have been possible.

Live Stock Conference Held

Excellent Program Is Heard by Small Crowds at Spokane

A renewed onslaught by the cold weather man apparently kept most of the farmers and live stock men of the Inland Empire at home February 20-22, taking care of their stock. Notwithstanding one of the best programs that has ever been arranged and carried out for the Northwest Live Stock conference, in Spokane on those dates, the attendance was the smallest in the history of the conference.

The conference opened Monday noon with a luncheon given by the agricultural bureau of the Spokane Chamber of Commerce to about 75 boys and girls engaged in live stock club work in the territory tributary to Spokane. Nearly all of these boys and girls had been financed in their club work by the banks of that city. During the day they visited these banks and made the personal acquaintatnce in each case of the officers, from the president down. J. K. McCornack; banker, and chairman of the chamber of commerce agricultural bureau, declared at the luncheon that the boys and girls were as good "risks" for loans as were their parents, if not a little better on an average.

Dairy Day.

The first afternroon of the conference program was devoted in large measure to the dairy industry. Professor E. G. Woodward of the State College of Washington discussed dairy production as applied to the average Inland Empire farm, especially the wheat farm of the Palouse country. He declared that there were insufficient milk and butter produced in the wheat-growing districts to supply the local demand, and urged that nearly every wheatgrower place from 5 to 10 head of milch cows on his place. He urged this not only because of the necessity of producing more milk and butter, but because he considers the dairy cow the beginning of a better general system of farming in the grain-growing section.

"Diluted" Cooperation.

The principal address of this session was that of J. A. Scollard, president of the United Dairy Associations of Washington. Mr. Scollard told of the success of the six county associations united under his presidency, and described the brand of cooperation they were using as "diluted" in contrast with the so-called "pure" cooperation. He declared that he would rather be connected with a successful organization operating on the diluted cooperative plan than with an unsuccessful one built on the pure cooperative principle.

Mr. Scollard dealt a vigorous blow to the filled milk industry, urging the conference to go on record as in favor of the passage by congress of the Voight bill, which will, if passed, prevent interstate traffic in products made up of skimmed milk and some oil or fat other than butter fat.

The conference without dissenting voice adopted the following resolution on this point:

Whereas, the manufacture and distribution of imitation milk products is recognized as a menace to the dairy industry of the United States and particularly to the industry in the states of Washington and Idaho; and

Whereas, the Voight bill, now pending in congress, which prohibits the interstate movement of so-called filled milk products, would remedy the existing conditions; and

Whereas, it is our desire to promote in every possible way the best interests of the dairy industry of the United States and the states of Washington and Idaho; be it therefore

Resolved, That the sixth annual northwest live stock conference assembled on February 20, 1922, express its approval of the Voight bill and recommend to its representatives in congress their complete support of this measure.

Urges Purebred Sires.

Dr. S. B. Nelson, dean and director of the extension department of the state college, under whose supervision a survey of the state is now being taken with a view to eliminating the scrub sires of all classes of live stock found in the state—cattle, horses, hogs and sheep—outlined the work that is being done and urged the advisability of a vigorous campaign with this accomplishment in view.

The Boys and Girls.

"Purebred animals, purebred wheat, purebred buildings and purebred methods mean purebred and happy boys and girls on the farm," said O. M. Plummer, president of the Pacific International Live Stock exposition, in an address on the future live stock breeders of the country. He declared that we ought to forget the "back to the farm" idea and concentrate our efforts on a "stay on the farm" movement. The place to begin this "stay on the farm movement," he said, is with the boys and girls, and the best way to begin with them is to assist them in their efforts to have and develop something of their own, especially live stock in some form.

The subject of the address of C. W. Hickman of the animal husbandry department of the University of Idaho was the production of pork on northwest farms. He took up the subject from the standpoint of utilization of waste products, declaring that the amount of waste that could be turned into pork was the limiting factor in hog production on the average farm. He urged the necessity of a few hogs on many farms, rather than many hogs on a few farms.

G. O. Swales of Johnson, breeder of purebred Duroc swine, discussed the production of hogs from the purebred point of view. He declared that there was an actual shortage of purebred breeding stock at the present time in this state. Yet he urged, however, that no one rush pellnell into the purebred game, emphasizing the fact that it requires training and experience to make a success in it.

The Bankers' Viewpoint.

The bankers' attitude toward the live stock industry was discussed by George H. Greenwood of the Old National bank of Spokane. Mr. Greenwood declared that when there was depression in any of the major industries the banker felt it as actually as did any one else. He declared that there was no difference in the attitude of the average banker toward different legitimate industries, but that

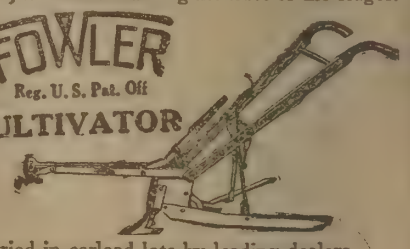
(Continued on page twenty-five.)

Farm Accounts

There are two types of farm account books that are especially adapted to farm use, according to R. N. Miller, farm management specialist of the state college. First, the farm record book, which shows the total cost and labor income of the entire farm. The second one is known as the enterprise record book, which goes more into detail and shows the cost of production and yearly income for each separate enterprise that is in operation on the farm.

"The two main ideas to carry out are cost of production and profit. It is not necessary to use any standardized account book in order to know exactly what the yearly income is. Almost any book can be used. Simplicity is an important point because no one can afford to spend too much time in keeping their accounts. In any system used, however, one should not forget to take inventories at the beginning of each year, so that this can be taken into consideration.

"There are some who keep their accounts for profit alone and do not estimate the labor income. This is sometimes an excellent idea because it is often hard to figure the value of one's own labor. Some farm owners estimate their own labor at $2000 a year, while at the same time others feel that $350 a year is sufficient. This merely shows how much a little difference of opinion will make.



"There are two ways of figuring depreciation, concluded Mr. Miller, "one is on the original price of building, animals, or whatever the case may be; while the second is based upon the replacement value. The latter will always fluctuate with labor and material price, or with changes in the stock market. The former method is the one most dependable, and is usually best for farm use."

It Works Like a Hoe

The FOWLER Light Draft Cultivator makes ***bigger crops*** because it does not disturb plant roots. It puts the land in perfect condition to absorb rain, and makes a mulch of fine dust which conserves plant food and prevents the escape of moisture.

Covers 8 acres a day with one horse. One trip to the row. ***Cuts every weed.*** Does as good work as you can do with a hoe. ***Saves time and labor.*** Remove the plow foot, and you can cultivate astride the row.

The ideal cultivator for potatoes, corn, tobacco, beans, beets, tomatoes and truck crops. Can be adjusted to cultivate above or below the level, without disturbing the sides of the ridges.

These Four Lee Tires
delivered 26 months
continuous service

LEE *Puncture Proof Tires*

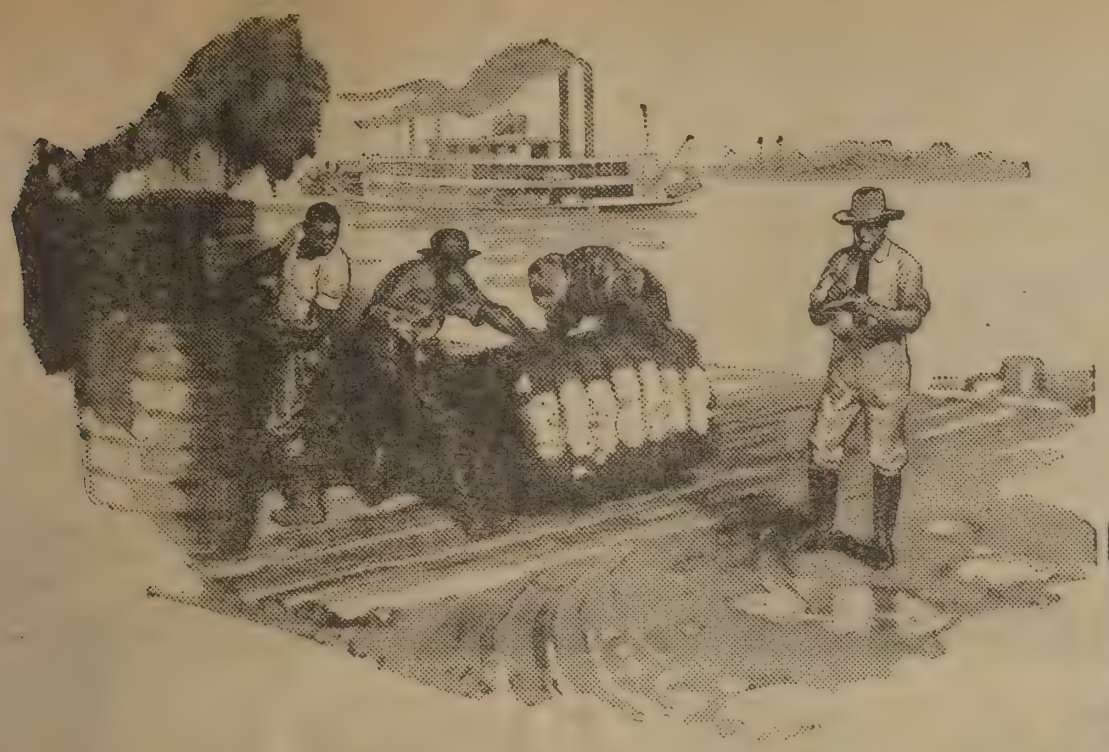
LEES Smile at Miles

Every week day for more than two years (26 months) this set of Lee Puncture-proof Tires carried J. L. Hodges of Spray, N. C. to and from his work, without a puncture, blowout or other trouble.

IN the experience of Mr. Hodges there is food for serious thought by every farmer in the land. For it is just such continuous service that is required of every farm owned automobile, truck and general service car, if it is to deliver full return on the investment it represents.

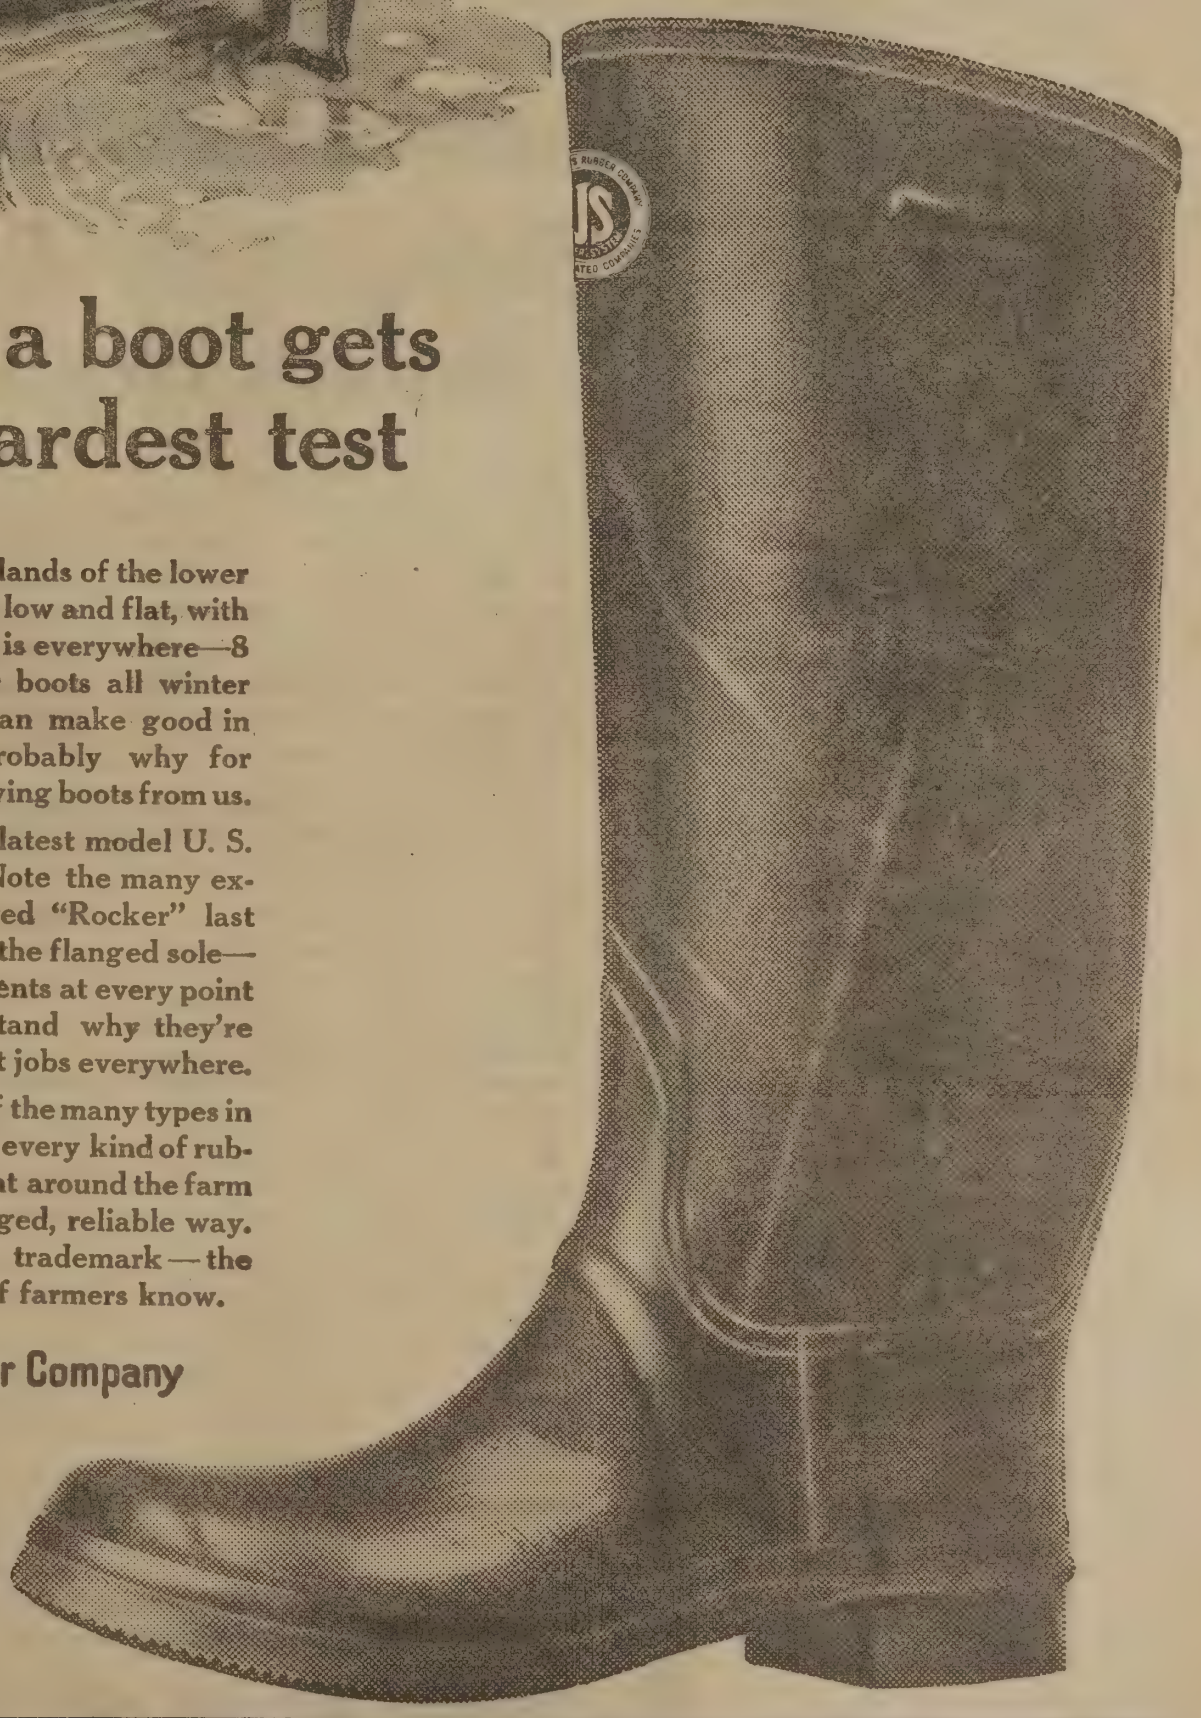
Lee Puncture-proof tires are unlike all other pneumatics in that they do away entirely with the annoyance, delay and expense of punctures.

While the first cost of Lee Puncture-proofs is a trifle higher than Lee Regular Fabric or Cord tires, they are by no means a "rich man's tire." It is the man who must secure maximum service per dollar of tire investment who most appreciates Lee Puncture-proofs.



The added service, protection and mileage assured by the Lee exclusive puncture-proof feature, make this the most ecomonical and satisfactory pneumatic made, for any car used where road hardships are most severe and uninterrupted performance most desirable.

All types of Lee tires are exceptionally well made, from best materials. All are quality guaranteed against fault or flaw. But the Lee Puncture-proof is the only pneumatic in the world that carries a cash-refund guarantee against puncture.



The Lee Line of Pneumatic Tires and Government Specification Grey Tubes is represented by responsible dealers, in every locality.

The "U. S." Boot

Here's where a boot gets its longest, hardest test

DOWN in the rich farm-lands of the lower Mississippi Valley it's low and flat, with hardly any drainage. Mud is everywhere—8 out of every 10 men wear boots all winter long. No ordinary boot can make good in Mississippi; and that's probably why for forty years they've been buying boots from us.

Look over a pair of the latest model U. S. Boots at your dealer's. Note the many exclusive features—the curved "Rocker" last that makes walking easy—the flanged sole—the extra heavy reinforcements at every point of strain. You'll understand why they're making good on the hardest jobs everywhere.

U. S. Boots are just one of the many types in the big U.S. line. We make every kind of rubber footwear you could want around the farm—all built in the same rugged, reliable way. Always look for that U. S. trademark—the honor mark that millions of farmers know.

United States Rubber Company

Marketing Berries

Cooperation That Will Protect Against Own Dishonesty

In an address to the Washington Berry Growers' association at Sumner, Wash., N. H. Nelson of Omaha said that during the last season he handled something like 31 or 32 cars of fruit for the association, adding that the great majority of the fruit was in fine condition. "We did have some slack boxes. This you should try and overcome, as it injures the sale of the entire car. There were also some lines of berries that would show mold, while other lines next to them in the same row would be in perfect condition, showing that they were either overripe or handled badly at the time they were picked and packed.

"A chain is just as strong as the weakest link. So with a cooperative association. It will only be as strong as its individual members are loyal. The greatest enemies of an association are sometimes its own members. There are always some seeking special privileges. Some who in putting up a case of fruit camouflage it with just enough good fruit to pass the inspector, while the case as a whole will have neither quality nor weight. Such growers think only of cooperation extending as far as themselves and perhaps a few of their immediate friends. What we must have is cooperation that will protect us against our own dishonesty while protecting us against the dishonesty of others—cooperation that is constructive and not destructive.

"When you ship out a car of fruit 500, 1000 or 1500 miles it is very easy for the man at the receiving end to pick out the weak points in that car of fruit. During the transit period every case of berries has been subjected to a constant jarring and jolting for those hundreds of miles and the fruit has settled down to a compact mass. If the boxes were slack-filled they would be about two-thirds full or if the fruit was overripe it will show heavy mold. The result of this is a lower average price on the entire car. Now this may not have been due to any dishonesty of any grower, as I have found that the great majority of growers are strictly honest and anxious to do the right thing. All they need is proper instruction and a thorough understanding of what is required of them."

Mr. Nelson adds a few words as to the prospects and conditions which will affect the selling of fruit the coming season:

"The coming season is likely to be a complex one for your sales manager. The most difficult problem—the one that requires the finest judgment—is to determine how high a price the consumer will take your berries at. My experience has been that the tendency has been rather to put the price too high than too low. If you have only a car or two to put into each market, put the price as high as you can. Get every dollar they will bring. But this policy will not do where you have a volume to move if you expect the market to use your berries for a period of time and in quantities that will feed 75 per cent of the people in that market; you must place a price on your product that will harmonize with the values of similar products, especially so in these unsettled times.

"There is no question but what you men are growing a fruit that there is a splendid demand for. In fact, they are growing in favor year by year and with men of vision and initiative to handle the distributing end of it there can be no question of success.

"If you growers do your part by putting up the best case of berries that you know how, so that we receivers can tell the trade that we are offering them the best that is to be had, after the consumers have had one or two boxes and found they contain both quality and measure, they will begin calling for your berries and the demand for them will grow from year to year.

Just Folks

In his days Alexander conquered the known world, but the orbit of the earth was not changed by a hair's breadth nor was the orbit of human affairs disturbed seriously.

We have just passed through the greatest of world wars and yet the old world wags on much the same.

Whether you have more money or less money is not fundamental. Whether you are enjoying happiness or suffering pain are incidentals.

Whether you live in America, or Asia, or Africa, or in the far islands of the sea, is not fundamental. Whether you sit in the presidental chair or are the doorkeeper at the White House, is immaterial when considering the fundamentals of life.

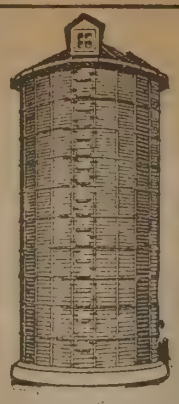
Today you are poor—tomorrow you are rich. You are the same individual on both days.

For 30 years I have watched the ups and downs of people in a thriving western city. The incidental changes of life have been many. Popular families have passed into obscurity and out of obscurity have come popular families.

Nor is so-called fortune always to the so-called deserving. Nor is so-called misfortune always the part of those who follow devious paths.

Even influence and power are not of the fundamentals. Influence and power may come, influence and power may go, or influence and power may remain for a season. Yet these things do not disturb the tenor of human life.

What you love and what you hate, what you hope and what you fear—these are fundamentals. In short, what you want and what you don't want are fundamentals. What you get and what you don't get are incidentals.



There are also fundamental facts as well as fundamental desires in life. Birth and marriage and death are fundamental facts.

There are fundamentals in races as well as in individuals. The ancient Egyptian symbolized the borderlands of the unknown; the ancient Hebrew the borderlands of righteousness; the ancient Greek the borderlands of art, and the ancient Roman the borderlands of government. The insights given to these races were fundamental in history.

While the ancient Egyptian explored and symbolized the unknown the modern American is exploring and symbolizing what can be used, and in that is doing fundamental work. Great cities and great manufactories and great railroads are largely incidental. But that certain inventive genius which converts the forces of nature into the uses of man—that is a fundamental contribution to the race.

Years ago we had a milkman who delivered the milk from his own cows. There were a lot of the fundamentals in his life. He knew as he went his rounds when to expect the flowers in the spring. He knew where the birds nested. He read contentment in the green carpet of the earth and in the blue of the heavens. He had a deeper possessory right of the shrubbery of the gardens and of the trees where he delivered his milk than did the owners themselves. And yet, as success is counted, he had more or less of a losing game to the end. Peace be to his ashes.

"Give us the luxuries of life and we will dispense with its necessaries," was the bright saying of John Lothrop Motley. So we might say, "Give us the incidentals of life and we will get along without the fundamentals." In fact, it is probably better that incidentals do engross our attention. But perhaps a thought or two of the fundamentals might be hidden away in the back of our heads awaiting the time of their need. E. A. S.

ALL ABOUT Silos

I invented the H-L-F silo, which everybody seems to like. I have written a book, entitled "All About Silos," which I will be glad to send free and without obligation to anybody who is considering purchase of a silo. Lots of good facts in it. Write your name and address below and mail.

Montgomery Ward & Co.

The Oldest Mail Order House is to-day the *most progressive* —

1872

THE first little one-page mail order leaflets were sent out by Montgomery Ward & Co. in 1872. The first catalogue, pictured above, was issued in 1874. It contained eight pages, about three by five inches in size. This was the beginning of the mail order business—of selling goods direct by mail at one small profit.

1922

FIFTY years of fair dealing, of prices that always offered a saving, and today this big Golden Jubilee Catalogue contains everything for the Home, the Farm and the Family—everything at money-saving prices.

50th Anniversary

This big Golden Jubilee Catalogue pictured above is priced to match the spirit of the times. Some things are priced at no profit, many things at very little profit. It is your best guide to the lowest prices.

THIS is the Golden Anniversary of Montgomery Ward & Co. We have completed Fifty Years in the service of the American Public.

In 1872 this business was begun in one small room, twelve by fourteen feet.

Today, millions buy from us on faith in the name: "Montgomery Ward."

Upon what is that faith founded? Upon Fifty Years of fair dealing, upon Fifty Years devoted to selling only goods of standard quality at the lowest possible prices.

This 50th Anniversary Catalogue keeps faith with our customers. It is priced to meet present-day conditions. It is filled with new, fresh merchandise with every price based upon the new low costs of production.

Some things at No Profit Many things at Little Profit

At Montgomery Ward & Co. we believe we owe a duty to our customers—that it is our duty to sell everything today at the lowest possible prices.

We believe we owe a duty to the American Farmer. Therefore, we are selling *all our Tillage Tools absolutely without profit to us.*

Many of these tools are actually priced at less than it would cost us to replace them today. This is the way we are keeping faith with the American Farmer.

And to the American Woman we are offering almost equal advantages—everything needed in the home—everything to make the home more attractive—everything priced at a big saving for you.

All are offered at the lowest prices possible today.

The New-Old Spirit of Montgomery Ward & Co.

We are entering our second half century of business existence. And we step forward with the spirit of youth, of progress in Service and Saving for you.

To give you bigger and bigger values, to give you better and still better service, to quote always lower and lower prices—that is our work and our accomplishment today.

Buy from this 50th Anniversary Catalogue. Know that the price you pay is the right price for whatever you buy. Know that every order you send, every letter you write, will be handled in the full spirit of the Golden Rule.

If you have a copy of our 50th Anniversary Catalogue, lend it to your friends.

If you have not a copy of our 50th Anniversary Catalogue, borrow one from a neighbor.

Livestock and Dairy

Won Third Prize

The following is the letter written by L. P. Powers, Palouse, Wash., in The Washington Farmer's recent prize contest on the subject, "Hogs as a Byproduct on the Farms of Washington." This letter was awarded third prize:

It is an accepted fact that a few pigs should be raised on every farm to utilize the windfall fruit and waste products of the house and garden; it is equally true, though not so generally recognized, that this is only the beginning rather than the end to the usefulness of the hog as a by-product of the farm.

A careful study of conditions in the wheat belt shows strikingly some very undesirable conditions. Our system of continuous grain growing is slowing depleting the supply of humus in the soil. This is shown by its greater tendency to run together and bake and to wash during fall and winter rains.

A more diversified system of farming, including soil improving, forage crops and sufficient live stock to consume them on the farm, is necessary that the soil may be maintained in a sufficiently high state of fertility to insure the production of profitable wheat crops. Alfalfa is the most valuable and generally grown soil improving forage crop in this section of the country, being a nitrogen-gathering plant having the power to bring the free nitrogen of the air into the soil. It also has a large tap root system which extends several feet into the soil, producing by decay a large amount of humus evenly distributed through the soil exactly where it will do the most good. This increase in the humus not only increases the capacity of the soil to absorb moisture, but also promotes the better circulation of the air through the soil and hastens the chemical changes necessary to render plant food available.

Nearly half of our great wheat belt is in summer fallow each year, representing idle capital. Over the greater portion we receive sufficient rainfall to produce a good crop each year if proper precautions are taken to conserve the moisture. In this part the idle summer fallow is necessary and represents a great loss. Experiment has shown that wheat sown on pea stubble yields fully as well as and in many cases better than when sown on summer fallow. The only objection to the peas is that the market, at a price that will show a fair profit after paying the high harvesting expense, is very limited.

In deciding the kind of live stock to raise as a byproduct the first thing to consider is their ability to utiltze to the best advantage the crops produced as a byproduct for which there is not a ready cash sale. It is readily seen that in the wheat belt alfalfa and peas are the natural byproduct crops. The danger from bloat being too great with cattle or sheep, pigs and horses are the only farm animals that can profitably be pastured on alfalfa, and pigs are the only ones that can make economical use of the peas. Keeping this in mind, one may easily see that pigs are the live stock best adapted to this type of farming.

The best results are obtained by having the sows farrow about the middle of April, in houses so located that the alfalfa pasture is easily available. When handled in this way the pigs will start grazing when only a few weeks old. A medium grain ration should be fed until peas ripen, when the pigs should be allowed to harvest the peas. When handled in this way alfalfa will show gains of 500 to 700 pounds per acre, after making allowance for gains from grain fed, and the peas 400 to 500 pounds gain per acre, without any exepense for harvesting and with all the vines and manure left on the fields.

L. P. POWERS.

Palouse, Wash., R. 1.

Study Lamb Feeding

On Tuesday, March 7, there will be held at the Prosser experiment station of the state college a meeting of much interest to the live stock men and farmers of the state, especially those interested in the sheep business. On that date final results will be available on a series of lamb-feeding experiments conducted by the animal husbandry department of the college.

For several weeks 14 lots of 50 lambs each have been receiving at the station 14 distinct feeding rations. Among the questions that these experiments are expected to answer are: What is the difference in feeding value of first, second and third cuttings of alfalfa hay? How does sweet clover compare with alalfa hay in feeding value? How do results from full grain feeding compare with those from limited grain feeding? What is the value of cottonseed meal in the ration? What is the value of silage in lamb rations? What is the value of beet molasses when fed to replace one-third of other concentrates?

March 7 will be known as feeders' day at the Prosser station, and a large attendance is expected.

Butter Will Not Gather

I can not make the cream come to butter. No matter what temperature I have the milk, nor how long I churn the butter will not make. The cream is nice and there are signs of butter, but it does not gather and warm or cold water to assist in gathering it will turn it back to milk. What is the matter with it?—Mrs. T. P. C., Yakima, Wash.

There are many causes of difficult churning. The most important ones are unripened cream and low temperature. The former being a result of the latter to a certain extent.

The cream is often kept so cold that the bacteria producing the lactic acid, which in turn makes the casein of the cream brittle, have not been able to develop. Thus the cream remains sweet and tough, almost leathery in consistency. To overcome this difficulty the cream must be warmed and given time to sour.

The low temperatures also harden the fat globules to such a point that they will not stick together easily in the churning process. Certain feeds and dry grass hays will also cause hard fats. On the other hand, feeds such as silage, root crops, bran, linseed oil meal produce soft fats which churn easily.

Cows far advanced in lactation very often produce hard fats.

Ripening the cream well as suggested previously and then churning at a comparatively high temperature will make it possible in nearly every case to make the butter come in 30 to 40 minutes regardless of the condition of the cream. Making changes in the ration will also help. Be sure to use a thermometer and try to churn around 60 to 65 degrees at this time of the year.—A. B. N.

For Greater Activities

The Washington Jersey Cattle club anticipates greater activities for the year 1922 than it has ever experienced in the past. At their annual meeting late in December the members asked E. W. Trezise of Tolt, the newly elected president, to act as field man and line up the Washington Jersey men for a stronger organization. The club set the membership fee at $1 for each purebred animal and 25 cents for each grade animal in the herd.

It is the aim of the club to affiliate with Jersey breeders of Idaho, Oregon and California and employ a field man who can spend his entire time in the four states in the interests of the breed.

Officers for 1922 are as follows: E. W. Trezise, president; R. L. Tanner, Sumas, vice president; Warren Lincoln, Potlatch, secretary-treasurer; N. C. Sears, Winlock, and William Auld, Waikiki farm, Spokane, members of the board of directors.

NEW STATE CHAMPIONS.

Several new state champions for milk or butterfat production have recently been reported for the Pacific northwest by the Holstein-Friesian Association of America One of the two for Washington is Pietertje Mutual Fobes, T. J. Owens' junior 3-year-old world champion, which made 654.72 pounds of fat from 21,368.3 of milk in 305 days. The other is Countess Matador Segis, a senior 3-year-old, which becomes state seven-day champion, with 25.668 pounds of fat from 540.2 of milk.

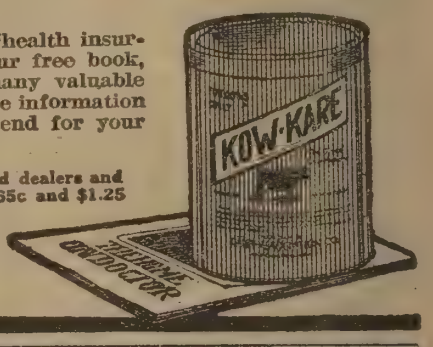
SMOKES HIS MEATS BY PAINTING IT

Utah Farmer's Simple Method Gives Wonderfully Delicious Flavor.

Any one can give hams and bacon a wonderfully delicious flavor and save time and money through the easy curing method used with success by W. H. Laws of Richfield, Utah.

Mr. Laws simply paints his meat with Wright's Smoke. By this method he smokes meat perfectly in a few minutes without fire, trouble or loss. Wright's Smoke gives the meat a better flavor than the old method, keeps all insects away and prevents shrinkage. Mr. Laws sugar cures his meat with a mixture of 27 pounds of salt and a bottle of Wright's Ham Pickle. Get these genuine, guaranteed Wright Pure Food Products from your dealer.

Simply send your name to E. H. Wright Co., 850 E. Broadway, Kansas City, Mo., for valuable illustrated book on expert methods of curing meat. Also learn how you can get a complete, highest-grade butchering set at lowest factory cost.—Adv.



WHY take chances with cow health, when such a little outlay will keep the whole herd in the pink of condition and producing at maximum profit? Now-a-days Kow-Kare is being used fully as much as an aid to perfect health and milk yield during the winter as it always has been as a medicine for cow diseases.

Actual tests in hundreds of dairies prove that Kow-Kare can be used as a preventive and production aid with wonderful results, at a cost of only about a cent a day per cow. Easy to prove it for yourself; select a poor milker and use Kow-Kare according to directions for a short period. By improving the assimilation and digestion, you will note a decided gain in milk yield.

Kow-Kare has positive medicinal qualities that build up and strengthen the organs of production and reproduction. As a sure, reliable remedy for Barrenness, Abortion, Retained Afterbirth, Scouring, Bunches, Milk Fever, Loss of Appetite, etc., Kow-Kare has a reputation of twenty-five years success.

Dairies that use Kow-Kare as "health insurance" are the profit makers. Our free book, "The Home Cow Doctor," has many valuable hints for cow owners, besides definite information on how to treat cow diseases. Send for your copy today.

Kow-Kare is sold by general stores, feed dealers and druggists at the new reduced prices--65c and $1.25

developed a new senior 4-year-old 305-day champion in Nellie Marilla Netherland, which made 469.7 pounds of fat from 12,851.7 of milk, and in Idaho there are three new champions, all in the 305-day division. Dorothy Walker De Kol, a junior 3-year-old, tested by the Intermountain institute of Weiser, made 392.75 pounds of fat from 11,404.9 of milk; Zeldenrust Kirby 2d, a full-aged cow, also owned by the institute, made 364.85 pounds of fat from 10,020.4 of milk, and Alaska Yukon Colantha 3d, a junior 4-year-old, owned by the University of Idaho, made 319.09 pounds of fat from 9466.4 of milk.

VETERINARY

By DR. S. B. NELSON.

Examine Cow's Mouth—We have a cow that just had her calf and is very sick. She has lost weight fast, can hardly eat and slobbers most of the time. Her salivary glands are swollen badly and she can hardly chew. This sickness lasted about nine days then she got better and gained weight, now she is sick again. The calf is about four weeks old. She cleaned soon after the calf was born. Please advise us what to do. Is the disease catching?

F. D.

Keller, Wash.

Examine the cow's mouth and see the contents that you find in there. It is possible that she has some derangement in the mouth, either by her teeth or by foreign substance. Try washing her mouth out with a sodium hypo-phosphite solution, about a teaspoonful to a cup of water.

Pig Affected with Scurvy—I have a pig six months old that has the scurvy. Its teeth have become black and are breaking off and are falling out. Can anything be done for it and will its teeth grow again? What causes this condition? A. K. T.

Republic, Wash.

Feed your pig with boiled bran mash with a small quantity of linseed meal in it. Add to this about a teaspoonful of epsom salts, and I think the matter will clear up.

Contagious Abortion.—Last spring I purchased a 4-year-old bull for service. A number of cows served by him repeated. The first cow served did not repeat, but dropped her calf after six months. She was in good health and showed no unusual signs prior to time of parturition. She did not clean very well, but has showed little or no discharge. She eats well, keeps in good flesh and gives about three gallons of milk daily. I have kept her from the rest of the herd. Would an examination of both sire and dam show if affected with abortion? M. B.

Monroe, Wash.

If you will write to the extension service, State College of Washington, asking for a bulletin on contagious abortion, the same will be sent to you. This will give you the latest advice on contagious abortion.

May Need Operation.—Is there any remedy for a cow that will not get with calf?

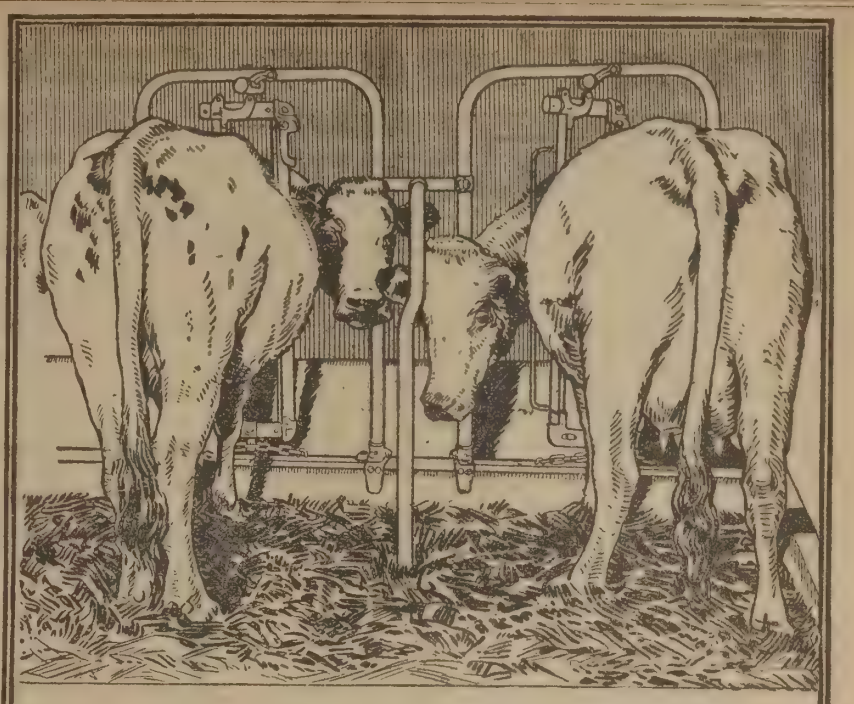
Brush Prairie, Wash. T. H.

It is quite possible that your cow is suffering from a cystic ovary. This needs an operation if that is the trouble, and your local veterinarian will be able to give you advise and suggestions. It takes about four or five operations, covering a period of four or five weeks. The cyst has to be broken about that often to prevent its further development.

Mare Sleeps Standing.—I have a mare about 10 years old, gentle and sound. She never lies down in stable and sleeps standing, and in that condition falls down on her knees. Sometimes when loose in pasture she lies down and rolls, but won't lie down to rest. She also coughs several times after drinking water. Any other time she does not cough. She is sound and a fast traveler. F. W. H.

Kapowsin, Wash.

There are some horses that never lie down to sleep. You should keep her well bedded, so that when she does fall she will not hurt her knees. Maybe the following stimulating liniment applied to the throat will stop the cough: Croton oil, one part; olive oil, 20 parts. Mix well and rub on the throat. This will blister. After three or four days apply olive oil to the scab and in about 8 or 10 days or two weeks it will come off.



Clots in Milk.—Our cow's milk has clots that look like cream in it. What is the matter? H. B.

Newport, Wash.

Your cow has a slight attack of garget due to infection. Possibly just a purge will clean up her system. Give her one and one-half pounds of epsom salts and then you might give a tablespoonful of fluid extract of phytolacca in a pint of water once daily for a few days.

Milk Gets Bitter.—I have a cow that was fresh last April and she will freshen again in April. She is still giving two gallons of milk a day, but her milk gets bitter when it stands and the cream will not

(Continued on page twenty-one.)

Your Barn is Wrong—*IF*—

—if your herd isn't healthy—if your milk yield isn't large enough—if you've got too much work to do—your barn is wrong—it should be modernized with Star Barn Equipment.

If you want to see the milk yield go up and the sick rate go down—if you want to have a sound, productive herd and cut your labor costs in half—then—investigate Star Barn Equipment, because it's built to do just those things for you.

Star Barn Equipment is an investment—instead of costing money it saves cash and labor, increases profits and is a permanent source of added income for you.

United States patents protect the exclusive features that put Star Barn Equipment in a class by itself—you will find these advantages in no other brand. For instance, the Unit System which enables you to add stalls as your herd grows—the Star Alignment Device which keeps bedding and stalls clean and lessens labor—the Star Curb Clamp which cuts down installation cost—these and many other features you wouldn't be without are exclusive with Star.

In the Star Line, you'll find more than merely Steel Stalls and Stanchions—everything for the barn, inside and out, is there: Water Bowls, Pens, Ventilation Systems, Litter and Feed Carriers, as well as Harvester Hay Tools, Cannon Ball Door Hangers, Hoghouse Equipment, Garage Door Fixtures and a world of other farm specialties.

Our 348-page bound catalog, profusely illustrated in colors, is free if you'll write for it and tell us when you're going to build a new barn or remodel your old one. Our Plan Department is at your service, free. Use the coupon for plans. Write for the catalog.

Farm Machinery Entitled to Good Care

By PROF. L. J. SMITH, W. S. C.

Two years ago it was not popular to talk economy. We were on the crest of the greatest wave of reckless spending that this nation has ever known. Today, however, the cry is to pare off every unnecessary expense, to make the old last a while longer if it can be done without decreased efficiency. There is no branch of farming where economy can be practiced to better advantage than in first-class equipment, well cared for, for carrying on farm operations. Farm machinery is often notoriously abused and neglected. It is left to the tender mercies of the elements after its season of use is over. It is put back into the next season's work with but little attention.

The mortality of farm implements has been ruinously high. When they should have been in the prime of usefulness, they have succumbed to neglect and gone to the scrap heap. Here, then, is a splendid chance to cut down operating expenses during the next few years. Help the old machine hold out another season or two. It will be well worth while. Give proper care right from the start to the new machinery that you find it necessary to buy.

In the first place, every used machine has some weak spots, and these must be given the attention they require. Certain bolts are apt to loosen and if allowed to remain loose a little while become hard to keep tight. Take out such a bolt and examine it. You will often find that it has been loose so long that it no longer fits the hole—the hole has been worn larger and the bolt smaller. Often the threads are no longer sharp and tight fitting. Throw the old bolt away. Its usefulness is past; put in a new full-size bolt and, if neccessary, put a spring washer under the nut. Spring washers do not cost a great deal and they save a lot of unnecessary work in tightening up loose bolts.

Sometimes a bolt is loose and the nut is rusted so tight that it is very hard to get off, or the end of the bolt has been riveted down to hold the nut on. Possibly it is a carriage bolt and hard to keep from turning. In such a case, hold a sledge or heavy piece of metal against one side of the nut and split it with a chisel. If carefully done the threads on the bolt will not be spoiled.

Look over the brace rods and angle iron on the machine. Often they are bent out of line. This causes an extra strain on some other part or throws some part out of alignment. Farm machines are made as light as possible on account of draft, and while the parts are strong enough for their work, yet they will not stand abuse.

Good paint goes a long way toward prolonging the life of farm machinery. If one prefers not to buy a ready to use paint he can mix his own, using white lead, red lead, dry colors, such as the ochres and venetian red, and raw linseed oil and turpentine for drying. Paint saves the wood and protects the iron. Don't put it on unless the wood is thoroughly dry. Don't put it on too thick. Brush it in well, and put on several coats.

Farm machinery is worth housing. To pay out good money for high-grade machinery and let the weather slowly eat away one's hard-earned purchases is not wise.

Modern Machinery Essential.

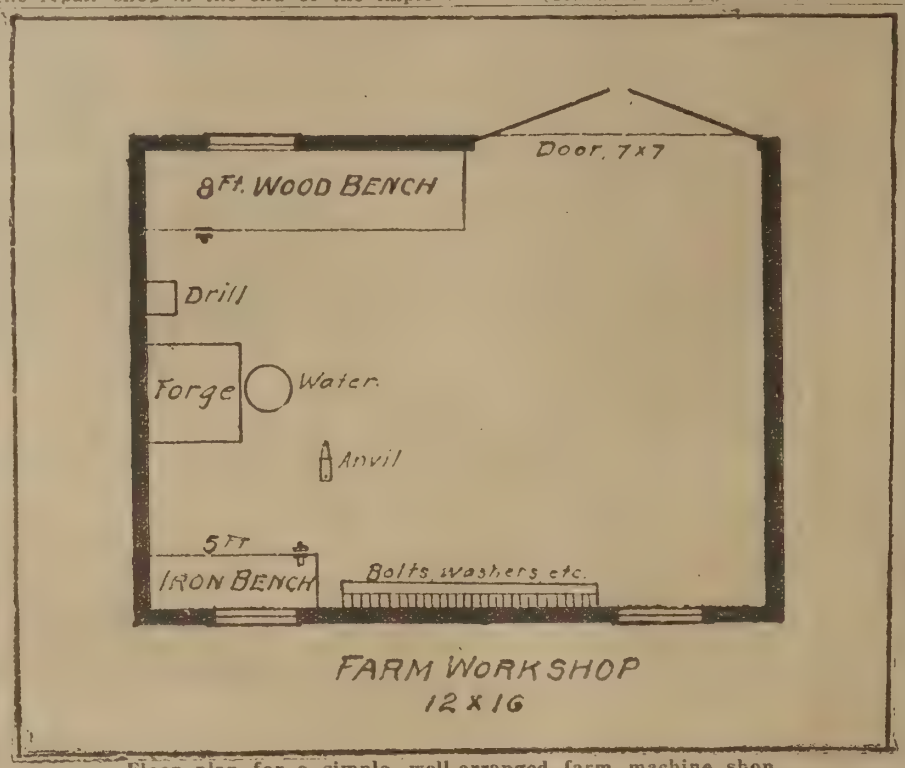
Each generation sees more machinery used in agriculture. Never will we go back to the old hand methods. When the cradle was thrown aside for modern harvesting machinery it was estimated that the time required to produce a bushel of wheat was reduced from three hours to 10 minutes.

The farmer must more and more be a good mechanic. The success of his business will more and more depend upon his ability to get the most out of his machinery in the least time and in making his machinery last.

To do these things he must have a repair shop and some good tools. It will soon be said that a farmer will be known by the tools he keeps. Encourage the boys to go some place where they can learn how to use tools and take care of high-grade machines. The young farmer should know a gas engine or tractor thoroughly, yet with the idle winter months we get only a hundred young men in our gas engine and tractor short courses and we have practically every make of gas engine and tractor in common use waiting for men to learn to handle them properly. Surely the young farmer is missing the "big chance" in neglecting his winter opportunities for self-improvement.

Use Only Good Tools.

Buy good tools and take good care of them. Have a definite place for each tool and see that it is kept there. Keep a stock of bolts, washers, cotterpins and rivets in a set of pigeon holes on the wall where you can lay your hands on them without pawing over a lot of junk in a box. Have a small, strong bench and a good machine vise for iron work, and a larger bench for wood work. Don't mix iron and wood working tools; if you do, the wood tools are soon in worse than bad shape.



The accompanying sketch shows a well laid out repair shop. Any one can build it. It has the benches well located and there is a good floor space to bring in machines if necessary.

On a large farm many prefer having the repair shop in the end of the implement shed, which is also essential to good farming, but that arrangement increases the fire hazard.

Use Oil Wisely.

Lubrication is an important item in the upkeep of any machine. Farm machinery is no exception to the rule. Good oil is cheaper than repair bills. Where one part moves against another, there is wear. Oil

Floor plan for a simple, well-arranged farm machine shop.

NITRATE of SODA

(15 per cent Nitrogen immediately available)

"the ONE fertilizer element that MUST be used!"

WHATEVER other fertilizers you use this year, be sure you also use Nitrate of Soda.

One of the best known agricultural experts in the Northwest (name on request) says, in referring to an exhaustive series of fertilizer tests:

"The only results obtained from complete fertilizers have been secured where Nitrogen was used."

The reason for this, as shown by numerous practical tests and chemical analyses, is that the soils of this section are practically always deficient in one soil element—Nitrogen.

Use Nitrate of Soda for fruit, berries, market and home gardens, wheat, oats, alfalfa, etc. Cheap, clean and easy to apply.

McQUAY-NORRIS
PISTON RINGS

Give Your Engine More Power—and Save Gas

Gas that leaks past worn or poorly designed piston rings is a dead loss. It wastes power and money. That's why it pays to replace leaky rings with McQuay-Norris equipment. It will increase power, save gas and oil, and decrease carbon trouble in any passenger car, truck, tractor, or stationary engine. The McQuay-Norris line is complete for every need. Through the addition of McQuay-Norris Wainwright Pistons and Piston Pins to the McQuay-Norris Piston Ring line, you can now secure for your gas engines complete McQuay-Norris-made Pistons, Piston Pins and Piston Ring equipment.

McQUAY-NORRIS WAINWRIGHT PISTONS & PINS

Send for Free Booklet — a valuable explanation of the relationship of piston rings to gas engine operation. Address Dept. BD

McQuay-Norris Manufacturing Co.
St. Louis, U. S. A.
Canadian Factory: McQuay-Norris Mfg. Co., of Canada, Ltd., Toronto, Canada.

LEAK-PROOF — an exclusive two-piece design, preventing loss of gas and compression. Gives equal pressure at all points on cylinder walls. For all piston grooves except top, which should have Supercyl. Each ring packed in a parchment container—

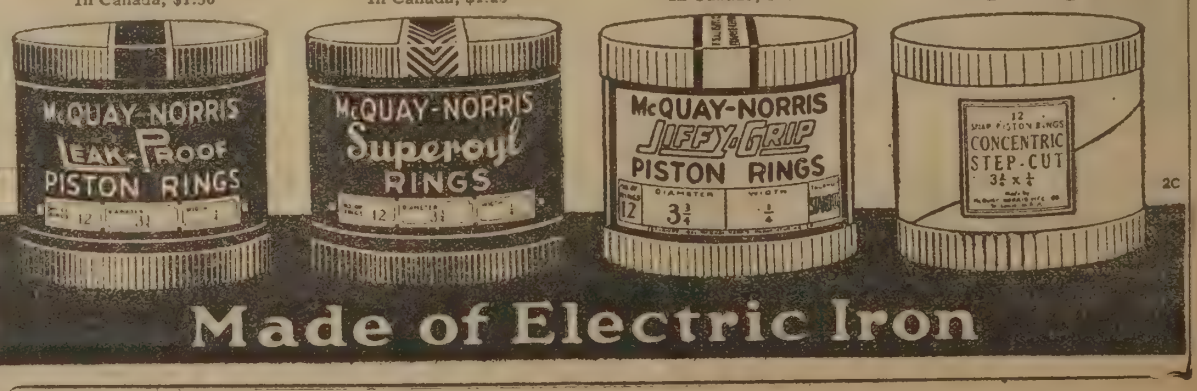
$1.25

In Canada, $1.50

Supercyl — Keeps lubricating oil out of combustion chamber. Collects excess oil in each down stroke of piston and empties on each up stroke, which ordinary grooved rings cannot do. Each ring packed in a parchment container—

$1.00

In Canada, $1.25



JIFFY-GRIP — a one-piece ring. Non-butting joint which can be fitted closer than ordinary step cut — velvet finish—quick seating. "Seats in a jiffy." Packed to keep them clean and free from rust. Each ring packed in an individual glassine envelope—

50c

In Canada, 50c

Snap Rings—of the highest grade. Raised above the average by McQuay-Norris manufacturing methods. Their use insures all the satisfaction possible for you to get from a plain snap ring. They are packed twelve rings to the carton and rolled in waxed paper.

And Snap Rings of the highest grade

Made of Electric Iron

Sales of Purebred Shorthorns

A total of 78 purebred Shorthorns brought $17,625 at the association consignment sale and the Day & Rothrock sale held in connection with the northwest live stock conference last week. The general average for the entire 78 head was about $226, with the prices paid at the Day & Rothrock sale on Hercules ranch, near Sprague, much higher than those at the general consignment sale held at the Spokane Union stockyards. An average of $282.61 was paid for 44 head of the Hercules herd, with an average of about $284 for the bulls and $281 for the cows and heifers.

The top-priced animal was Hercules Snowstorm, the yearling calf of the grand champion cow, Hercules Matchless; sire, Village Sultan. He was taken by J. E. Trimble of Farmington, Wash., at $960. Albert Owes of Amber, Wash., paid the next high price of $705 for Hercules Imperial, a Gainford Perfection calf. The top-priced female was Hercules Violet 2d, a roan 3-year-old, bought by W. L. Henderson of Revere for $490. W. L. Henderson was the largest single buyer at the Day & Rothrock sale, taking 11 cows and heifers and two bulls for a total of $3900, or an average of $300.

A feature of both sales was the large number of animals purchased by Whitman county farmers and breeders, to be used in connection with wheat farming. Two club boys, active in last year's Hercules steer club, Ralph Cole of Pullman and Eugene Harms of Tekoa, were buyers.

A third Shorthorn sale was scheduled for last week as one of the circuit, that of A. D. Dunn of Wapato. Owing to the inability of certain prospective buyers to get away from their farms during the extreme cold weather and their snowbound condition, Mr. Dunn postponed his sale until Thursday, March 16, when it will be held at his place near Wapato.

Both sales last week were cried by "Sandy" Keith of Davenport, Wash., and E. O. Walter of Filer, Idaho. The consignment sale was managed by Carl A. Greif of Uniontown, Wash.

The following is a detailed report of both sales, giving the animal, date of birth, buyer, address and price paid. When not otherwise stated the address of the buyer is in Washington state:

THE HERCULES SALE.

Usefulness

Is lack of power preventing you from farming more land?

Are your crop yields limited by shallow plowing, or by seed beds prepared improperly or too late?

Will the spring work leave you tired out and dissatisfied this year because of the slow progress you made?

You can overcome all these limitations, and the losses they cause, by the purchase of a Case Tractor *now*. You can realize a profitable return on its dependable power and ability to do all your heavy work.

Case Tractor Sizes; 10-18, 15-27, 22-40.

One of these sizes will meet the power requirements of your farm. The 10-18 will plow from 6 to 9 acres a day and perform other work at a corresponding rate. The 15-27 will perform the same operations about fifty per cent faster. If your field or belt work demand greater power, the 22-40 will best meet your requirements.

Because of its greater efficiency, the largest tractor you can use advantageously will prove the most profitable.

Power.

Case heavy duty kerosene engines are noted for their power, flexibility and economy. Case Tractors have demonstrated remarkable economy and efficiency by winning the majority of all important tests in which they have been entered.

Ample reserve power has been provided to meet all emergencies with recommended loads. An even flow of power from flexible, Case four cylinder, valve in head engines is always ready for light or heavy pulls. The sure acting governor automatically maintains correct field or belt speeds. With the two speed transmission it is possible to get maximum results from the various implements used. A well designed drawbar of proper height and with a wide range of adjustment makes the correct hitching of plows and other tools easy.

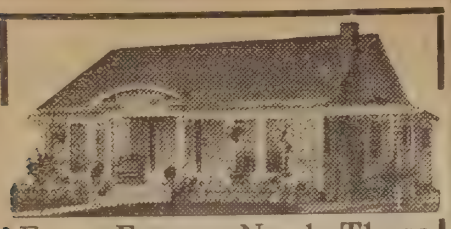
Belt Work.

Belt operations are often the most profitable work of a tractor, and, on the average, make up more than a quarter of its entire work. On Case Tractors the belt pulley is mounted on the engine crankshaft where the full power of the engine is available for belt work. Being directly in front of the operator it is easy to line up with the driven machine. This feature saves hours of time in a busy season.

General Purpose Tractors.

All three sizes of Case Tractors are adapted to road hauling, grading, and all field operations by reason of correct weight, proper weight distribution, and effective traction speeds.

The requirements of actual farm work determined the essentials of Case Tractor design and construction. That is why the Case is so well adapted to all kinds of drawbar and belt work—so useful to farmers.



Call on the nearest Case dealer for complete information about Case Kerosene Tractors, Threshers, Silo Fillers, Baling Presses, Road Machines, Grand Detour Plows and Disk Harrows, or address a postcard to

Get Ready for Leaf Roller

Dormant Oil Spray and Arsenate of Lead Are the Weapons

The following is the spraying table for the control of the fruit tree leaf-roller:

Severely infested orchards	Dorm-oil	8 gal .....100 gal.	Late Dormant
	Lead Arsenate	4 to 6 lbs. ..100 gal.	Pink Spray
	Lead Arsenate	4 to 6 lbs. ..100 gal.	Calyx Spray
	Lead Arsenate	6 lbs. ..... 100 gal.	First codling moth cover spray
Moderately infested orchards (between 1 per cent and 5 per cent fruit injury)	Lead Arsenate	4 to 6 lbs. ..100 gal.	Pink spray
	Lead Arsenate	4 to 6 lbs. ..100 gal.	Calyx spray
	Lead Arsenate	6 lbs. ..... 100 gal.	First codling moth cover spray
Lightly infested orchards (less than 1 per cent fruit injury)	Lead Arsenate	4 to 6 lbs. ..100 gal.	Calyx spray
	Lead Arsenate	6 lbs. ..... 100 gal.	First codling moth cover spray

FRUIT TREE LEAF-ROLLER.

H. E. Newman, Spokane county horticultural inspector, in charge of pest control investigations, gives the following spray recommendation of the state horticultural division for fighting the fruit tree leaf-roller in Spokane county for the year 1922:

At least 24 hours without rain should follow an application of oil. Do not attempt to spray with any material when the trees are wet.

Avoid fall or winter applications of oil. Ordinary low temperatures may be disregarded in using oil in the spring.

Continued use of oil year after year has never been shown to injure the trees. Two applications of oil at Otis Orchards last spring did not injure the trees.

A few early applications of oil have given as good results as any late applications. On the average, late applications have given better results than early applications. But orchardists who have no spray machines of their own can not all postpone their oil spraying till late in the season—unfavorable weather conditions and lack of sufficient equipment will not permit.

Oil may safely be applied with only slight burning till the cluster blossom buds appear.

Thoroughness and care in mixing and applying oil sprays are absolutely essential to success.

Allow no orchard to omit the first two codling moth sprays. To do so may make such orchards leaf-roller breeding grounds.

The above recommendations are based on the experimental work conducted in the Spokane valley in 1921 by the horticultural division in cooperation with the farm bureau, on observation of the results secured by a large number of orchardists, on the recommendations of investigators in other leaf-roller infested districts and on the cost and availability of the materials.

Of all the materials in use in the valley last season, but two have proven worthy of mention. These are dorm-oil and arsenate of lead. On the experimental plots arsenate of lead seemed to give better actual control of the larvae than did the dorm-oil. On the other hand most investigators in other districts have not given lead a very high place in their control program. Furthermore, wherever used, including the Spokane experimental plots, the percentage of fruit injury has always been greater in the orchards sprayed with lead than in those sprayed with dorm-oil.

So far as can be judged from the results of 1921, at least 24 hours dry weather should follow an application of oil if favorable results are to be expected. A few cases were reported where satisfactory control resulted when the application was followed by rain the same evening, but these cases are rare. Of course the trees should not be wet, either from rain or from fog when the oil or any other spray material is put on.

Fall or winter oil sprays are to be avoided. Numerous instances have been cited where fall spraying with oil has resulted in severe injury to the trees. The ordinary low temperatures of spring, however, did no apparent damage in the Spokane valley last season. Several oil applications are known to have been made when the minimum temperatures of the nights following ranged from 18 degrees to 26 degrees F. No injury to the trees has been apparent to date though they were watched closely all summer; and in the one such plot in which egg counts were made, (the one where the following night temperature dropped to 18 degrees F.) better than 80 per cent of the eggs failed to hatch.

According to the best opinion available, continued use of oil year after year does not injure the trees. Childs of Hood River has stated that he did not think any damage had resulted there in orchards where oil had been applied for five consecutive years. Here in the Spokane valley no evidence of injury has yet appeared on trees sprayed with dorm-oil 8-100, both in 1920 and 1921. Nor has any damage so far resulted in trees which, because of rain following close after the first application, were given a second application of oil last spring.

The Spokane experiments shed but little light on the question of late versus early season spraying with oil. One plot sprayed March 26 gave as good results as were secured at any time during the season. On the average ranch under observation, however, better results were obtained late in the season than early. Where possible it is probably advisable to delay the spraying till the last two or three weeks previous to the bursting of the leaf buds. Several orchards were sprayed last year when the first leaves were three-fourths or one inch long, with but little damage

OILPULL TRACTOR

A Baffling Problem Solved in the OilPull

For many years engineers have known the Four Vital Factors necessary in a tractor to make cheap power. These are (1) Lowest Fuel Cost. (2) Lowest Upkeep Cost. (3) Longest Life. (4) Reasonable Purchase Price. (See diagram above.) The problem has been to combine these four vital factors in one tractor. The Rumely OilPull produces *cheapest farm power* because it *combines all four.*

TRIPLE HEAT CONTROL

There are unusual features in OilPull design and manufacture. Chief among them is *Triple Heat Control* . . . the perfected, scientific, oil-burning system which solves the problem of getting the power out of cheap kerosene.

Due to *Triple Heat Control*, the OilPull is sold with a bona fide, written guarantee to burn kerosene successfully under all conditions and at all loads up to its full rated brake horse power.

The local Advance-Rumely Dealer will gladly demonstrate all the features of the OilPull. In the meantime, write for a copy of our catalog and the new Triple Heat Control booklet.

RUMELY OilPull TRACTOR

ADVANCE-RUMELY

resulting—the leaves were burned a trifle, a very few fruit spurs were killed. A month later practically no damage was apparent. In connection with delaying the spraying, probable weather conditions must be considered. A survey of Spokane's weather records for the last 10 years gives some interesting figures. During the months of March and April an average of slightly less than six dry periods of two days' or more duration occurred. These periods averaged 5.4 days in length. This means that if 1922 is an average year, a total of 31 days' spraying weather (or, if the last day of each period is counted out, then 25 days) may be expected; about 15 of them in March and 16 in April. In 1911 there was no spraying weather from April 13 to April 31; in 1915 there was none from April 15 to April 28, and in 1918 there was none from April 17 to April 31. Chances are being taken when the spraying is postponed till the last of the season.

There can be little doubt that the oil used in the Spokane valley last spring varied somewhat from barrel to barrel. Some barrels were more effective than others. But probably the biggest factors contributing to the unsatisfactory results secured on some orchards were:

1. Failure to rock the barrel long enough to get a thorough mixture of the contents before drawing it out for mixing with the water. The oil as it comes in the barrel is not a single definite compound, but is a mixture of materials which to some extent separate upon standing, the lighter materials rising to the top.

2. Failure to get a proper emulsion in mixing the oil with the water. If a scum of free oil forms on the surface of a tank of spray a good emulsion has not been obtained. The spray is weakened and the trees struck by the free oil will probably be burned.

3. Failure to thoroughly cover the trees. In over half of the orchards where egg counts were made last spring from 15 per cent to 40 per cent of the egg masses had not been struck by the oil. Perhaps such results are to be expected where oil is being used for the first time. The spray is very light compared with the lead spray or lime sulphur, it has little carrying power when applied against the wind. Therefore, it is but natural that any one accustomed to using these other sprays should make a few misses when first tackling oil. It must be remembered, too, that the egg masses are not the easy marks that a casual observation would indicate. Practically all of them are found on the upper sides of the limbs to which they are attached, a large percentage are cleverly hidden just below a projecting spur or twig, over half of them occur in the top of the tree attached to the tips of the smaller branches. Further explanation should not be required to show the extreme care that is essential to success in spraying with oil.

Spraying from the top of the machine or from a tower is strongly urged. In many orchards it will be found advisable to spray only one side of a tree row at a time in order that, when spraying against the wind, the machine may be kept as close as possible to the trees. It is impossible to spray from the middle of a tree row to the opposite side of both rows of trees if even a slight breeze is blowing.

Fruit Selling

Will Be Conducted by New Agency

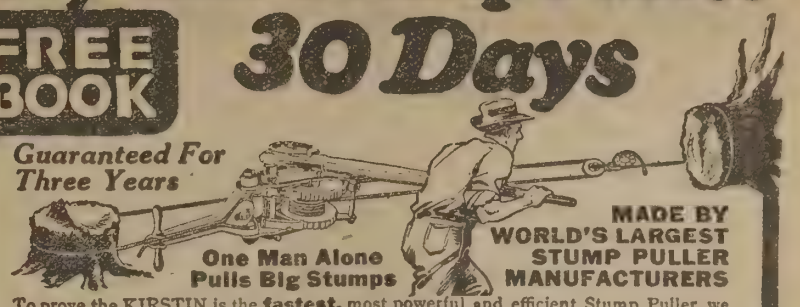
Articles of incorporation have been filed with the secretary of state at Olympia for the North American Fruit Exchange of the Pacific Coast, a Washington corporation, having a capitalization of $100,000. Officers and directors of the company are Reginald H. Parsons, chairman of the board; W. F. Gwin, president; A. R. Rule, vice president; D. H. White, vice president and treasurer; A. A. Prince, secretary and sales manager; J. Curtis Robinson, general traffic manager; Worrall Wilson, counsel.

With the exception of A. R. Rule the incorporators, officers and directors of the new fruit marketing corporation live in Seattle. Mr. Parsons was formerly chairman of the board of the Northwestern Fruit Exchange; Mr. Wilson is president of the Seattle Title Trust company, and was formerly general counsel of the exchange, while W. F. Gwin, former president; Robinson, Prince and White were also long identified with that corporation.

The company declares its purpose to specialize in the service of the growers' cooperative movement and will confine its operations to a strictly service basis.

A news dispatch from Wenatchee says:

One of the most dramatic events in the fruit history of north central Washington was enacted during the closing sessions of the Skookum Packers' association when members passed a resolution giving the locals the right to contract their fruit with other selling agencies, reserving only one car for shipment through the Skookum association. The effect of the resolution was scuttling the old organization, if necessary, to release the membership from its marketing contract with the Northwestern Fruit Exchange.



It was a dramatic moment for the members, allied for cooperative effort, when the work of years in building and planning for a grower-owned and controlled organization was endangered because of the necessity to forever free themselves from a marketing contract.

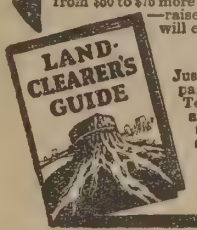
That action was taken after J. S. Crutchfield of Pittsburgh had appeared before the executive committee, the trustees and the general meeting and discussed the issue. It puts the growers of the Wenatchee region back where they stood nearly 10 years ago before they tied up with the Northwestern Fruit Exchange, a privately owned marketing agency controlled by Crutchfield.

Consignment Swine Sale

The first annual consignment sale by the Western Royal Swine Breeders' association, held at Spokane February 21, was a demonstration of the fact that interest in the hog business in the Pacific northwest is picking up. This demonstration lay not so much in the high prices paid, for the prices were not high, as in the fact that the breeders throughout the district were unable to send animals to the sale because of having already sold all their surplus or having already contracted them at private sale. About 30 head were sold, with William O'Brien, secretary of the association, as sales manager, and D. C. (Sandy) Keith, auctioneer. The top price of the sale was $75, paid by H. J. Shinn, Spokane, for a large Duroc Jersey sow consigned by Frank P. Busch of Johnson, Wash. The prices averaged around $50. Hogs of all the more common breeds were consigned.

Try this Stump Puller 30 Days FREE BOOK

MADE BY WORLD'S LARGEST STUMP PULLER MANUFACTURERS



To prove the KIRSTIN is the **fastest,** most powerful and efficient Stump Puller, we will ship you any size or style on 30 days trial. **Send No Money,** prove our claims in your own stump field before you pay.

Kirstin ONE-MAN Stump Puller

The KIRSTIN gives you a **giant's** power. Works on wonderful leverage principle. **One man pulls big stumps alone!** Weighs less—costs less—yet has greater **speed,** strength, power. Many exclusive patented features—no other like it. There is a KIRSTIN for every need—Horse Power as well as One-Man machines.

SEND NO MONEY—A YEAR TO PAY

Take a whole year to pay for your KIRSTIN in small monthly payments. Cleared land is worth from $50 to $75 more an acre than stump land. Increase the value of your farm—produce more bushels—raise your income by making this rich, new land pay you big profits. The KIRSTIN will earn more than it costs—**before you pay for it.**

LAND CLEARER'S GUIDE—FREE

Just printed—written by Country's greatest Experts, 80 pages full of pictures and beautiful colored illustrations. Tells best methods for all conditions. Most complete and valuable land clearing book ever published. It's **free.** Let us send you a copy. Ask for our low demonstrator prices and four easy ways to pay. Write today.

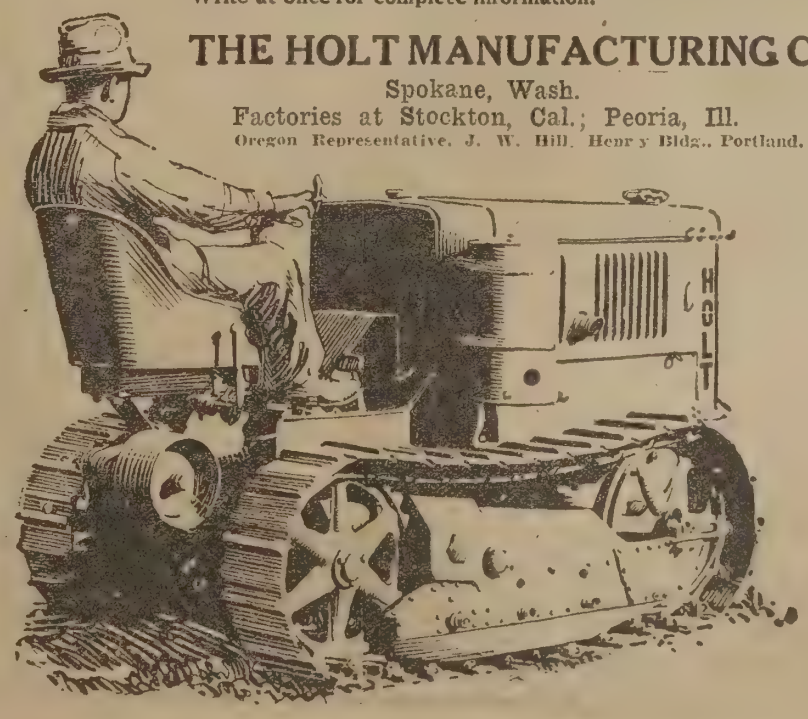
Power!

There's only one Caterpillar Holt builds it

Pound for pound of weight—inch for inch of size—this is the most powerful tractor on the market



CATERPILLAR

T-35 TRACTOR

In a space only four foot by six this tractor concentrates 25 motor and 15 drawbar horsepower. The T-35 weighs only 4000 pounds—ground pressure less than 4 pounds per square inch. It is a marvel of simplicity—contains only three units—motor, transmission, trucks with tracks. All parts enclosed. All bearings anti-friction.

"Caterpillar" T-35 Tractor is ideal for orchards, vineyards, berry fields—for road patrol work, hauling, general contracting—for all power needs on the small farm—for supplementary power on big acreage. It has almost unlimited usefulness for belt work—for pumping, sawing, grinding and other operations. Our Pacific Coast factory and service organization assure service anytime, anywhere. Write at once for complete information.

Poultry

The following points on poultry were picked up in Mrs. George W. Shoup's poultry class at the western Washington experiment station:

Millet seed is not a good grain for chicken feed.

Rye has plenty of feeding qualities, but chickens will seldom eat it.

The green leaves of cabbage have high feeding value, but the white leaves are apt to cause indigestion.

Dried blood is not desirable for feeding in a poultry ration. The blood should be fed as fresh as possible.

When buying fish meal for the poultry flock care should be taken to get the feed and not the fertilizer. Fish meal that has been prepared for a fertilizer is very apt to cause protein poisoning.

Beet pulp is never as good as beets or mangels, because it has had the juice squeezed out of them, which contains much of the feeding qualities.

When rape is fed in large quantities to laying hens it is almost sure to cause a greenish color to the whites of the eggs.

The first few hours of baby chick's life it is very sleepy. It has been through a severe strain getting out of the shell and it needs a rest.

Some hatches are ruined by the ventilators being clogged up with the downy formation thrown off by the chicks of the previous hatch. Such deposits should be thoroughly removed, both for the purpose of getting better ventilation and to eliminate disease germs.

After the incubator has finished the first hatch it should be thoroughly cleaned and sprayed with a 2 per cent solution of a good disinfectant. Don't fail to regulate the machine carefully before putting in another batch of eggs.

Watch for Symptoms

When I killed two nice healthy looking young roosters recently I found when I dressed them that the entrails had little white bumps on them a little larger than the head of a pin. The liver of one had dark red spots on it. Both birds were fat and looked perfectly healthy. S. T.
Riverside, Wash.

It is barely possible that the birds which you write of were affected with tuberculosis. However, generally we find yellowish, cheesylike spots in the liver and spleen, so that it is possible that some other infection is present.

I would suggest that you watch your flock carefully for the development of the following symptoms in any of the birds:

Lameness, gradual loss of flesh, determined by the amount of flesh on the breastbone, diarrhea, as indicated by soiled vent fluff and noting that these conditions develop principally in hens. If, on posting such individuals, you consistently find nodules on the intestines, and yellowish spots in the liver and spleen, you can rest assured that you have tuberculosis in the flock.

One should not be too hasty in diagnosing the disease as tuberculosis, as when it is determined this disease is present, radical measures must be taken to eliminate it. W. T. JOHNSON.
Western Washington Experiment Station.

Ration for Pullets

My young pullets have a floored scratching shed, with plenty of light and clean, dry straw to scratch in. Shed faces the south. Will you please tell me what ration or what kind of food and how much of each kind they require for egg production? If they have oyster shell before them all the time do they require any other dirt or gravel? F. C. K.
Kamiah, Idaho.

For egg production give your pullets a ration as follows:

Mix together 30 pounds of bran, 30 pounds of meat meal, 20 pounds of corn meal, 20 pounds of shorts and 20 pounds of ground oats. This constitutes the laying mash, which is to be placed before the birds at all times in a self-feed hopper.

For the scratch grain to be fed in the litter mix two parts wheat and one part corn and feed morning and evening in the litter. Do not overfeed. Have the birds hungry at feeding time. You can sprout oats from one-eighth inch to one-fourth inch in length and feed in the morning instead of the corn and wheat. Keep oyster shell, grit and charcoal before the birds all the time.

Trays for Oats

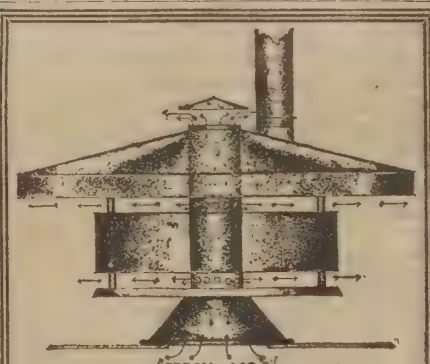
Would the clipping of chickens' wings in any way injure them? Please tell me some simple method of sprouting oats for 50 hens. How long should the sprouts be?
Jerome, Idaho. F. M. M.

The clipping of a chicken's wing would not injure it except for show purposes. In clipping the fowl's wings to keep it from flying over a fence, clip only one wing. In this manner it is thrown off balance when it tries to fly.

To sprout oats simply have five or six trays arranged in a rack within a closed cabinet. Soak the oats for 12 hours, then drain and place in pan on top rack. Next day move the tray down to next rack and repeat. The oats should be sprouted sufficiently in four or five days. The sprouts should be one-eighth inch to one-fourth inch in length and fed in the litter. In cold weather you will need to provide heat by the use of an oil lamp in the bottom of the cabinet.

Plan Better State Fair

Completion of the water grade road to Ellensburg, construction of the Naches Pass highway, suitable hotel accommodations in Yakima, direct rail connections to the fairgrounds, and a statewide exhibit of resources, including dairying, fishing and lumbering, were among the suggestions for the improvement and perpetuation of the Washington state fair at Yakima, at a meeting of the Kiwanis club of that city early in February with Secretary H. P. Vermilye, Senators William Bishop and D. V. Morthland and Representatives H. O. Lucas and W. P. Sawyer as honor guests. It was generally conceeded also that with all or part of these things accomplished, the levying of a millage tax to support the fair would be justified, and that such support is about the only thing which can give the state fair the place in Washington life to which it is entitled.



Last year the Kiwanis club maintained an information booth and a women's rest room on the fairgrounds. These facilities will be enlarged and continued, and the Kiwanians will work for the accomplishment of part at least of the foregoing suggestions. Completion of the road to Ellensburg, provision for state fair visitors and construction of railroad connections are considered among the most important undertakings for this year.

Chickens Sick?
Hens Not Laying

There's no excuse for roup, colds, canker, sore head, chicken pox, skin disorders, cholera, indigestion, bowel trouble and such ailments. GERMOZONE positively will rid your chickens of disease—and keep them healthy. For over 30 years the dependable remedy and preventive. Get Germozone and Lee's FREE BOOKLETS, which explain proper feeding and care and how to keep hens laying regularly the year round. At drug or seed stores. If no dealer, order by card. 75c and $1.50 sizes. Send no money—Postman will collect. No extra charge.

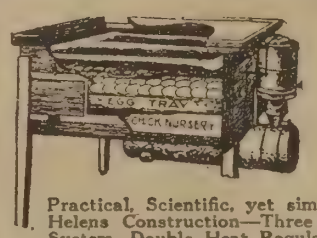
IRRIGATION made easy

WATER for irrigation purposes can often be delivered to the desired level without cost of pumping or without difficult flume or ditch construction

By the use of a
Hill Hydraulic Ram

These rams are constructed in sizes from 1 inch to 24 inches furnishing any amount of water from home supply to large irrigation units. They work with high efficiency and at no operating cost. Pump day and night operated by the power of the water, itself. No fuel — no engineer.

Rams are adapted to any place where water is to be raised from a lower level to a higher level if a slight fall or power-head can be obtained.



In laying out an irrigation project a great saving can frequently be effected by leading the ditch to a middle level and placing the ram below it so that part of the water can be raised by the ram to the higher bench and the discharge water can pass to the lower level without any waste of water.

If you are interested in irrigation—if you have land that is now above the level where you can flood — if you are using an engine where the water could be made to pump itself — fill out the coupon below. The catalog and information you will receive may show you how to save many dollars.

Orchard

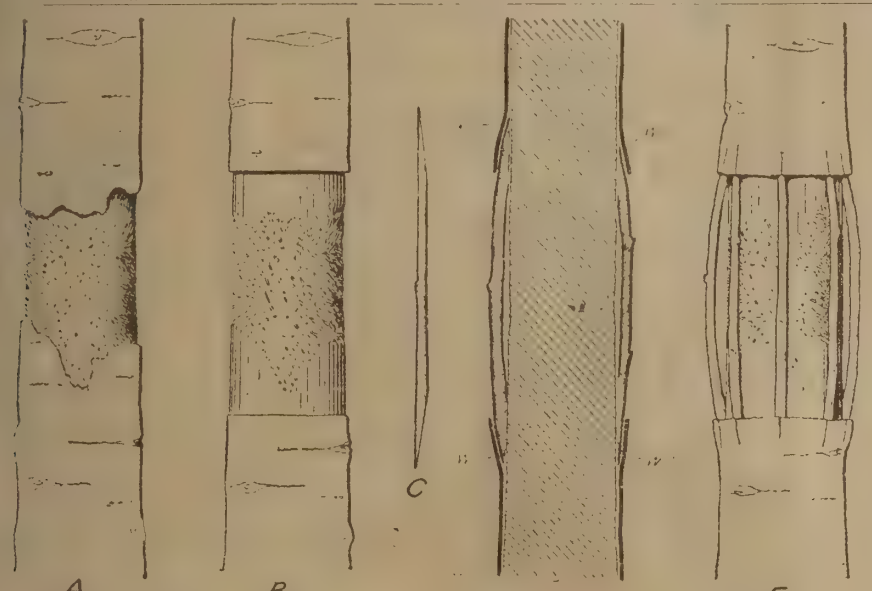
Mice Injury to Orchard Trees

By O. M. MORRIS

Head of Horticultural Department, Washington State College

Many orchardists are finding that the field mice have gnawed away the bark at the base of their apple and pear trees. Some of the trees are completely girdled. These pests will continue to be active through the remaining part of the winter and sometimes well into the early spring. Orchards in which poisons were distributed last fall are not immune to the trouble. The mere fact that poisons and definite efforts were made to control the mice should not be taken as a guarantee that harm is not done. In the late winter and early spring very careful observation should be made to see that the trees are not damaged. In many cases it would be worth while where there is any evidence of mice at work in orchards to distribute poison again. The best formula for this poisoning material is the one put out by the United States department of agriculture and is as follows:

"Mix thoroughly one ounce of powdered strychnine alkaloid with one ounce of baking soda and about one-eighth ounce of saccharine. Put the mixture in a tin pepper box, or a similar container, and sift it gradually over 20 pounds of steam crushed oats or the ordinary table rolled oats. Stir the grain constantly in the process, so that the poison will be evenly distributed."



Distribute this preparation over the infested areas, not more than a teaspoonful in a place, care being taken to place it in mouse-runs and at the entrance of burrows. To avoid destroying birds it should whenever possible be placed in the mouse runs under such shelter as piles of weeds, straw or other litter or under brush. The poison mixture can be put in old tin cans with the edges bent nearly together and these placed one by each tree.

The mice are much worse in orchards that have a cover crop or growth of weeds and grass than in the cleaned tilled orchards. Yet the mere fact that an orchard is clean tilled does not make it proof against the mice.

If damage is found provisions should be made for bridge grafting over these damaged areas on the tree trunks and roots. Scion wood should be collected during the pruning work and kept dormant for this bridge grafting. Clean straight twigs of last summer's growth make the best kind of grafting wood. These should be collected and buried in moist soil on the shady side of a building or placed in moist sawdust or material of that kind and kept in as cool a place as can be, provided in order that their growth may be retarded.

The bridge grafting can be done best just about the time the trees start rapid development in the spring or when the buds begin to swell rapidly. The wounds made by the mice should be treated as soon as possible after they are found.

If only the outer bark has been removed and the inner bark is left intact earth should be thrown over the wood as much as possible to prevent the bark drying out. If the bark has been entirely removed and the wood is exposed it should be carefully painted with a mixture made by dissolving coal tar in creosote. Apply this material with a brush and be careful to not spread the paint over the edge of the bark. The bridge grafting should be done after this painting.

Details of bridge grafting: (a) The trunk of a tree girdled by mice; (b) the wound cleansed and the bark along the margins trimmed back to healthy, growing tissue; (c) a scion, with beveled ends ready for insertion; (d) longitudinal section of the trunk with scions in place, showing their insertion under the bark of the trunk (w); (e) scions in place ready for waxing.

Club Work in Pierce County

An effort is being made to reach the out-of-the-way places in Pierce county and organize boys' and girls' clubs. Miss H. M. Hainke, county club leader, reports 250 farms in the county where there are boys or girls enrolled in club work. On a general average there will be two children in each family, thus making a total of 500 who will know the farming game fairly well before they have finished high school.

Wins Silver Loving Cup

The Tenino community of the Thurston county farm bureau won the silver loving cup offered by the four banks in the county for the community which put in the largest number of purbred sires. This district has placed 30 registered animals, most of which were dairy bulls. P. D Northcraft is the community chairman and T. O. McGuire is president.

TREES AND SHRUBS

Fruit trees budded from bearing orchards. Apple, Pear, Cherry, Peach, Plum, Prune, Apricot, Quince, Grape Vines, Shrubbery, Plants, Raspberries, Blackberries, Logans, Dewberries, Asparagus, Rhubarb, Flowering Shrubs, Roses, Vines, Hedge, Nut and Shade Trees. Carriage paid. Satisfaction guaranteed.

ALBATROSS BRANDS

Prevent

the "blotch" or "burn" of the spray on fruit

Observe this study in contrasts. The apple at the left was sprayed with Arsenate of Lead—a wonderfully good spray. But the user neglected to mix "Spray Spread" with it. Below is a similar apple—sprayed with the same kind of spray—but Albatross Spray Spread was mixed with the spray. Note the difference—the "lead" dried on the FIRST apple in spots or blotches. The second apple received an equal amount of protective spray—but it spread over the apple in a thin film. Appearance and marketing appeal of the apple is thus retained. The pictures tell why Government experts are so enthused over "Spray Spread"—why experienced horticulturists say it has NO equal for spreading an "arsenate of lead" spray.

Note the "blotch" or "burn" of the lead on this apple

ALBATROSS "SPRAY SPREAD"

(Calcium Caseinate Compound)

The Original and Genuine Spray Spreader

Quality Features:

1. Very finely ground—always uniform.
2. Quickly Soluble.
3. No lost time.
4. Protects fruit with uniform coating.
5. Does not injure foliage.
6. Recommended by experts.
7. Guaranteed by manufacturers.

Note the uniform, adhering film on this apple

Cooperative Idea

(Continued from page three.)

putting it in a pool and giving each his proportion of the returns. Credits were extended to several concerns from which collection is in some doubt, though on the whole its collections were good in proportion to the amount of business it did. There is some question as to whether expense accounts run up by salesmen were justified by the amount of business they did, and the organization of the association on a falling market and the very bad seasons of 1920 and 1921 were contributing causes of the misfortune."

Hopes for Reorganization.

"I can't say whether they will reorganize or not, though I hope they will," said Mr. Schreiner. "Hay growers would have greater advantages in organization than any other class of growers in the valley. They can ship in carlots direct to the consumer and they don't have to ship very far, so it isn't as though they had to hunt up a retailer to peddle out their product. Hay doesn't spoil, either, and that gives them an edge on the market. With a contract that is a contract they could finance their weaker members, and I see no reason why they could not operate on practically a cash basis. With state inspection to guarantee quality, they could ship hay to any firm or private customer and secure payment by sight draft attached to the bill of lading. From that standpoint a new association would have a great advantage over the old one. There isn't a commodity in the valley that needs organization as badly as hay, and if this association goes entirely to the wall it will be only a matter of time before there is another one. I'd like to see this one continued."

With this in mind the receiver has sent out notices to the growers explaining the situation and assuring them that it will be entirely safe to ship hay through the receivership. As they come in with claims details are explained to them and in many cases active enemies are converted into friends. Notice has gone to former customers as well, and it is hoped to keep the association functioning and to do enough business on the 1921 crop to liquidate some of its indebtedness.

"The market has been so thoroughly convassed that there is not much chance for very big business," said Schreiner. "However, I have sent out circular letters to all old customers and to dairy association members on the West Side, and we may drum up some trade. No solicitors will be sent out, and we've got to sell for cash, but we'll be glad to handle business on that basis. Clarence Glenn of Montesano, who was in the office the other day, says that the dairymen of Grays Harbor county are getting short of hay, and there is considerable inquiry from other sources. Some of the big mills are said to have been buying hay in large quantities to sell at cost with bran and shorts, which their mills are full of, and this and other factors have had a stimulating effect on the market even since I took hold of this job. The Canadian market probably will not be as good this year as last, but there's bound to be reaction from present low prices sooner or later, and after things have settled down a bit we'll see what can be done about reviving the association."

Taking everything into consideration, it appears to me that the cooperative idea, as far as the haygrowers are concerned, is in a very fair way to be preserved in Yakima.

Farm Machinery

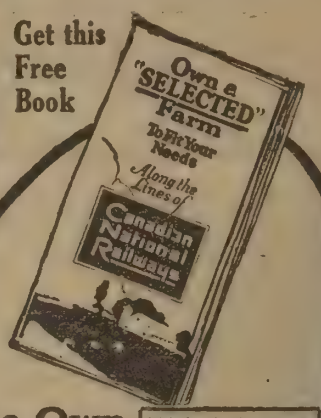
(Continued from page fourteen.)

acts as a film of minute ball bearings and keeps the wearing surfaces apart. All bearings should be thoroughly cleaned and oiled before the implement is put out on the land. If possible, the bearing surfaces should be thoroughly washed with kerosene.

For liquid oils, use a good grade of mineral oil. Avoid castor oils. Where bearings are oiled with hard oil cups, clean out the hardened grease. Scrape the old grease from the cups and put in fresh grease. Often a little graphite mixed with the grease when the machine is first put on the land assists lubrication.

Look over the machines and other necessary repairs early. Then, if the wrong parts are received, there is still time to back order.

Keep your repair books for each implement hung up in the repair shop and order by number.



At the end of the day in the field spend a few minutes going over the machine and tighten any loose bolts or bearings, fill grease cups, examine cutter bar, etc. Don't wait to do this until you have the horses on the machine. By thus keeping the equipment in constant repair the machines will last longer and less time will be lost.

LENA DEMING, Aladdin, Wash.—We enjoy The Washington Farmer very much, especially the stories. They are all good and any one can read them. No trash in them.

Tenant Farmers—Fathers starting sons—Young men looking for a future—Farmers who have decided to seek Virgin Soil—

Why rent when you can own a farm?

Get this Free Book

Any Man Can Own His Own Farm in Western Canada

In Western Canada, rich, fertile land is within the reach of any man. It is not uncommon for tenant farmers to pay for their new farms with the profits of a few crops. Fathers starting up their sons are able to buy acreage they can't obtain in ordinary overcrowded farming districts.

Men who were never able to make money out of their poor soil or expensive farms, have come to Canada and achieved independence within just a few years. Canada welcomes such men—for here they can succeed.

This free book tells you why you will succeed in Western Canada. It tells what other men have done. It will put you in touch with your opportunity. Send for it now. It is free—your enquiry will not obligate you in any way. For a real future—investigate. You will find this book interesting as well as descriptive. Send for it now.

Independence! Success!

Here, in Western Canada, independence awaits you with every advantage at hand—schools, churches, social life, markets—everything you are now accustomed to. It is the land of unrestricted opportunity.

Western Canada wants you if you will come prepared to gather the great harvest of a bountiful nature. Here you can share in bumper crops. Wheat averages are high. Rich, black loam, only awaits your hand to yield abundantly.

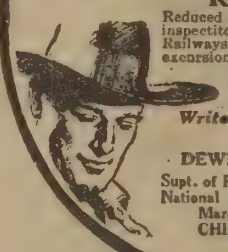
Dairy farming is highly profitable in Western Canada. Warm, sunny summers provide unexcelled grazing—excellent hay. Dry healthy winters make natural shelter suffice, as a rule.

Canadian National Railways

Help You Select Your Farm

This department of the Canadian National Railways will help you select the farm that meets with your needs. Buy the "cream" of the richest, most fertile wheat and cattle country of America. Own a farm that will actually pay for itself in a very few years. Taxes on land are low—buildings, improvements, animals, machinery and personal property *Are Not Taxed at All.*

Next Spring—Own Your Farm



Be your own man. Rear a future in the rich spaces of Canada. Give your children the advantages they should have. Feel "at home" with the knowledge that **all your work is to *your own profit*—that it is** bringing to you a reward that can't be taken away.

Low Prices—Increasing Values—Easy Terms

You can still buy land in this last great West for as low as $20 per acre. Yet, since 1915 values have increased materially. Buy now. Terms on "SELECTED" Farms: about 10 per cent cash down, balance in equal payments over a term of years, interest usually 6 per cent.

Reduced Rates and Special Excursions

Reduced railway rates will be made for landseekers and their effects to encourage inspection of the "SELECTED" farms along the lines of the Canadian National Railways. Personally conducted excursions for this purpose also will be arranged. Full information will be sent free on request.

F.O.B. Factory

Volume production makes these low prices possible. It's the time tried and proven Fairbanks Scale. You've always wanted one. It will give you the accurate weight of everything you buy or sell or use.

CHICAGO, 900 S. Wabash Ave.

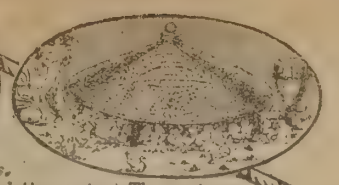
NEW YORK, Broome & Lafayette Sts.

and forty other principal cities in the U. S.

Your local dealer has both sizes in stock.

You can tell the genuine by the world trade-mark

Steel to steel bearings—Arrow Tip Beam—Large Platform—Wide Wheels



LOOK AT THE GOOD FARM BARGAINS THAT ARE OFFERED ON THE FARMERS' "WANT AD" PAGE THIS WEEK.

The Service Given by the Local Dealer Is Worth Consideration

The doctor who answers a hurry call with the greatest possible speed is more valuable than a physician of equal skill who drives up to the patient's door at his own convenience. Service counts. It is worth money. Who is there who doesn't agree with this general principle? And doesn't it apply also in the buying of merchandise? The progressive merchant in your own trading center gives service along with the goods. He has a selection of merchandise continually in stock. You don't have to wait. When you enter the store you are able to see the article itself in which you are interested. You see it with your eyes, feel it with your fingers; note its actual size, shape and color; compare it with other goods at different prices, and, if it is what you want, take it away with you. If you have questions to ask, you are given an explanation on the spot. The answer given your first question may suggest another query. It is answered within half a minute of the first interrogation. No time is lost. You benefit from the dealer's practical knowledge, from the fact that he is on the ground and ready at all times to see to it personally that the article he has sold you gives satisfaction. The wise buyer will not forget that such matters have a dollars and cents' value and should enter into the reckoning whenever a price comparison is being made.

RELIABLE
Standard
BLUE FLAME
Wickless
Oil Heated Colony Hover *J.W.Myers, Pres.*

AN INVENTION of our President, thoroughly covered by letters patent. The most practical heating and brooding device known to the poultry fraternity. Our 1922 model **Wickless and Valveless Oil Heated Colony Hover** embraces all the latest and best known improvements in hover construction. From the very beginning it has been the best. It is still far ahead in the front rank. We make sure that every one is right before they leave the factory. Every burner is tested and adjusted to the maximum flame. It will not overflow. It is impossible to clog and slow down the oil flow—it burns until you turn it out.

It Is Dependable—"Reliable Because Right"

Burns ordinary kerosene or coal oil with a clear, blue flame; absolutely no fumes; no soot; no odor; no wicks to trim; no smoke. It gives a pure, clean heat necessary for the comfort and health of chicks beneath the canopy, regardless of outside weather conditions. It is easily regulated. Automatically controlled. Insures the raising of chicks with least work and care at the lowest cost.

Hovers are built of galvanized steel. Shipped completely assembled, ready to bolt the legs to the canopy. Place the heater where wanted, fill with oil, adjust burner to the heat required, and it is ready to start and will continue to go, with little cost, in fact, a great saving in fuel, as long as you want it.

Our money-back guarantee completely covers your purchase, either through our dealers, or direct from us.

Write for literature, poultry guide and sales book, thoroughly descriptive of our Reliable Line.

All Reliable Incubators, Brooders, Hovers, Poultry Appliances and Equipment made at our factory are guaranteed to give absolute satisfaction. We are prize winners throughout the world.

VETERINARY

(Continued from page thirteen.)

churn. I feed alfalfa, beets, carrots and bran and shorts. W. R.
Colville, Wash.

Try giving her a handful of epsom salts in a quart of water once daily and see if that helps. Along about the first of February you will probably be wanting to dry her up, anyway, and give her a rest.

Goiter.—I have a 6-week-old heifer that has quite a large goiter. It has reduced considerably since she was born without any treatment at all. Would you advise me to keep her and doctor her? I also have a cow whose milk after being strained leaves particles of butterfat upon the strainer. Do you think this might be caused from what we are feeding her? We are giving her first cutting alfalfa and wheat hay, one-half pail of apples a day and warm bran mash twice a day.
Yakima, Wash. D. E. DeF.

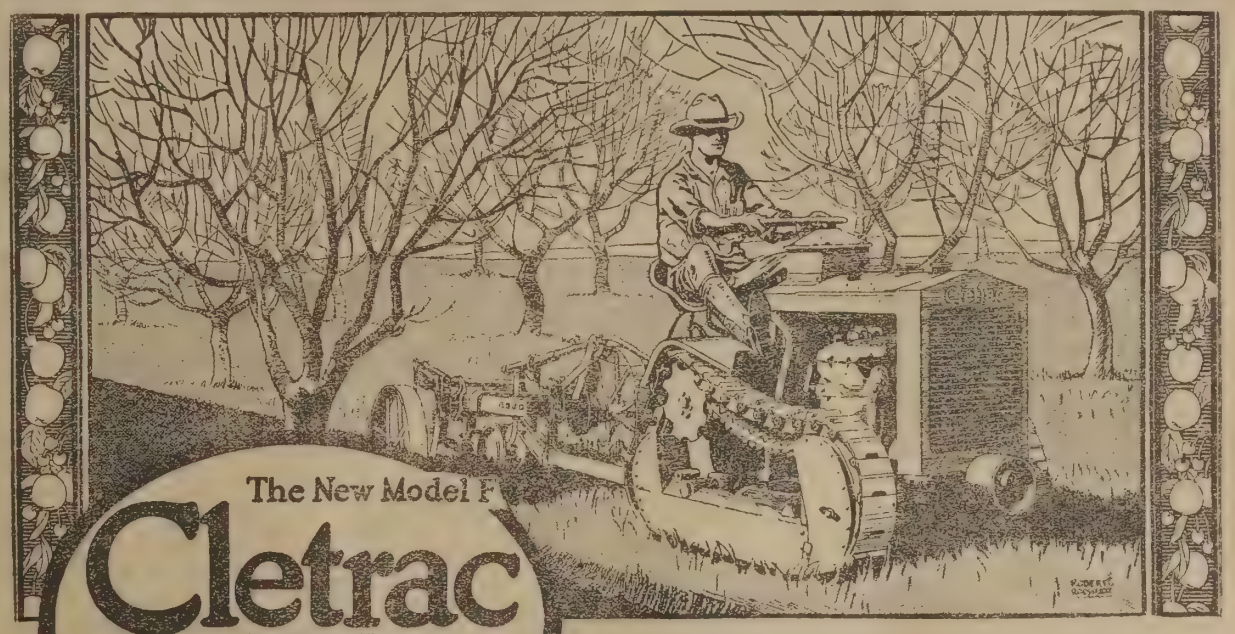
I would suggest that you paint the skin over the goiter with tincture of iodine. With a young calf this treatment often is of value. Paint it morning and evening. Try giving your cow one and one-half pounds of epsom salts in three quarts of water and see if that overcomes the ailment she has.

Causes Inflammation.—Does soapy dishwater with other liquid feeds hurt pigs? Can a very young calf, a week old, be fed skimmed milk, raw or boiled, with gruel made of barley, linseed meal and anise seed meal? A. B. L.
Addy, Wash.

Experiments carried on at Cornell, N. Y., showed conclusively that liquid feeds containing too much alkali develops inflammation of the intestines. This may result from too much soapy dishwater.

Calves can be fed on the ration which you use and be fairly well. It would be much better, however, if you could use whole milk for a while.

Hair Comes Off.—We have two yearling heifers and the hair comes off of their neck and around their eyes. They are continually rubbing and it seems to be contagious, as a young calf and cow also have it now. W. B. C.
Yelm, Wash.



Paint the spots where the hair comes off with tincture of iodine. Immediately afterward apply above the iodine a 5 per cent solution of silver nitrate. The treatment should extend one-half to three-fourths inch beyond the spot where the hair is off.

Delegate Plan

For Holstein-Friesian Meeting

Based on the membership count of January 21, Washington is entitled to three delegates for 317 members, Oregon to two for 158 and Idaho to one for 71, at the annual meeting of the Holstein-Friesian Association of America at Kansas City June 7. This is the first year that the delegate plan has been in use in the association. Its provisions, briefly, are as follows: Each state or territory is entitled to one delegate for the district and one additional for each 200 members or fraction thereof. On or before February 7, the association notifies all members of the number of delegates to which their district is entitled. On or before March 9 any 10 members within a district may nominate any member as a delegate, and in districts with fewer than 50 members, any two may do so. By April 8 each member will receive a ballot for his district and this must be returned, properly marked, to the secretary by April 28. On May 8 a credentials committee will receive the ballots, and by May 20 will have canvassed them and reported a preliminary roll to the secretary. On or before May 24 he will send notice of election to each delegate, and when the convention assembles June 7 the permanent roll will stand as the official list of delegates until the next annual meeting.

Almost 400 members were recently added to the national body, and among them are 11 from northwestern states.

The New Model F
Cletrac
Reg. U.S. Pat. Off.
TANK-TYPE TRACTOR
$795
Complete f. o. b. Factory

Hard this way, but—

Easy on a track—The Cletrac Way

1. Handles every farm job.
2. Plows 6 to 8 acres a day using any 2-bottom 12-inch plow.
3. Every part subject to wear constructed of chrome steel—weighs only 1820 lbs.
4. Automatically lubricated—no grease or oil cups.
5. Simple, care-free design—burns kerosene, distillate or gasoline.
6. Every working part quickly accessible.
7. Unprecedented value.

Model "F" Cletrac is made in four sizes: 31 inches wide, with 8 inch clearance; 41 inches wide, with either 8, 14, or 18 inch clearance.

Unbeatable for Orchard work

The "impossible" has been done! A tractor that is unbeatable for orchard work in addition to handling all other farm jobs, including all kinds of cultivating, has been developed!

With a complete range of usefulness for all farm work—with a price that is right in line with the demand of the hour—Cletrac F will actually make you figure the use of tractor power all over again.

Cletrac F does all your orchard plowing and cultivating, using the tools that you have on hand at present. It is low set and compact—works right up close to the trees without scraping bark or branches. Its remarkable short-turn ability allows it to swing from one row into the next with a single twist of the wheel. In addition—Cletrac F does all the regular farm jobs outside the orchard, including row-crop cultivation.

Its capacity for work is enormous—plows 6 to 8 acres a day—discs 15 to 20—harrows 20 to 25—and withal it is so simple, care-free and accessible. Equipped with a sturdy, powerful 4-cylinder kerosene, distillate or gasoline burning motor.

See your local Cletrac dealer or write our nearest office for full information.

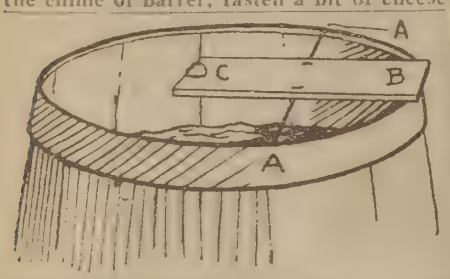
Waxed Paper

By ELIZABETH QUAKER.

About the only use our grandmothers found for paraffined, or oiled, paper, as they called it, was to line the cake pan when they baked fruitcake. The modern housewife uses waxed paper in many and varied ways. The slice of cheese is wrapped in a piece of waxed paper before putting it away, as are the small pieces left from the meal. This preserves their moisture, so they are in a palatable condition for the next meal.



The mothers of school children have learned its value in the lunchbox. It may not be practical to wrap each sandwich separately, but the piece of soft pie or the cake with the soft icing, when wrapped in paraffined paper, will carry nicely without becoming mixed up with everything else in the lunchbox. When using part of a lemon, if the remaining piece is wrapped tightly in a bit of waxed paper it will keep in a usable condition for several days.

If one has occasion to wrap a piece of meat, especially fresh beef or liver, it is best to use waxed paper. This does not absorb the juices of the meat, as does ordinary wrapping paper or newspaper; neither will it stick to the meat.

A Rat Trap Always Ready

Here is a suggestion for a rat and mouse trap sent in by Wesley Ray of Rainier, Ore. One of the merits claimed by him for it is that it always "sets" itself after catching a victim:

Fill a 40 or 50-gallon barrel half full of water; get a piece of board six or seven inches wide and long enough to reach from the chime two-thirds of the way across (B). Now take a wire and staple the board on top of this, so the board will swing free (AA). Put the ends of wire through the chime of barrel; fasten a bit of cheese

on end of board (C); set the barrel wherever the rodents frequent. A fine way is to sink it in the ground to within one foot of top of ground, anyway make it easy for them to get upon the board. They see and smell the bait, run out to get it, the end tips down and they take a plunge into the water where they soon drown, the board settles back in place, baited and ready for another victim.

This is the only trap in the world that is always set and baited. It catches them while you sleep. The end of board (B), which rests upon chime must be a fraction heavier than the bait end so it will settle back when tipped up.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 45 Review Building, Spokane, Wash.

POULTRY (Baby Chicks) 174

"WHAT THEY SAY."—"YESTERLAID EGG Ranch, Kent, Wash. Dear Sir:—Is there any chance for 1200 chicks the 1st of April? Well pleased with your pullets last year. They laid between 50 per cent and 60 per cent since last October." Jack Sheridan, Greenacres, Wash. "Dear Sir: I bought 400 chicks of you last spring and will say they were the best layers I have. I would like to buy between 400 and 500 more next month. What time in February could I get them?" Mrs. Leonard Fossett, Dungeness, Wash. "Jan. 6th, 1922. Dear Sir: Enclosed find $7.50 as 15 per cent payment on 250 chicks. Our neighbor, Mr. Wood, got some from you last year and they certainly are good layers." William Stark, Coeur d'Alene, Idaho. We hatch 12,000 chicks every 5 days from our own wonderful trap nested White Leghorns. All of our 8000 laying hens are trap nested and bred to lay. We have 40 acres devoted exclusively to White Leghorns, all with wonderful egg records. More than 50,000 chicks already sold, but we still have good dates left if you book your orders at once. Send for price list and dates you would like chicks shipped. Yesterlaid Egg Ranch, Kent, Wash.

WHITE LEGHORN AND ILL-A-HEE BARRED Rock chicks—Buy chicks this year that live and grow and are bred to lay. Butler White Leghorns and Ill-a-hee Barred Rocks are known for high average flock production. Before ordering elsewhere, write for circular telling how our breeding methods produce 200 flocks for our customers. All stock trap nested and pedigreed. Also get our prices on breeding cockerels and hatching eggs for each breed. Address Butler Poultry Farms, or Ill-a-hee Poultry Farm, Jennings Lodge, Ore.

HUSKY, VIGOROUS WHITE LEGHORN BABY chicks from genuine Yesterlaid Egg Ranch of Kent, Wash., stock. I can fill any size order, large or small, full count and safe arrival guaranteed. Place your order now, today. Orders are coming in fast. I ship every Wednesday. I give full directions for the care of baby chicks with each order. If requested, written by a noted expert. Write for shipping dates, prices, etc., at once. Small deposit required with order. T. E. Schreiner, Kent, Wash.

THE PROGRESSIVE HATCHERY — BABY chicks from vigorous range bred stock; trapnested S. C. White Leghorns, $20 per 100; selected S. C. White Leghorns, $18 per 100; S. C. R. I. Reds and Barred Rocks, $25 per 100; safe delivery of live, vigorous chicks, full number ordered; absolutely guaranteed. Send for circular of special matings and hatching eggs. 1534 East 12th North, Portland, Ore.

BABY CHICKS, COCKERELS, SINGLE COMB White Leghorn; heavy laying strain. Grape Lane Poultry Farm, Turner, Oregon.

POULTRY—Baby Chicks (Continued) 174

"FRESHLAID" WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for the heaviest egg production; every "Freshlaid" male is from a high record hen. Freshlaid Farms is one of largest and oldest chick plants in the Inland Empire. There is a real demand for "Freshlaid" chicks, especially from our old customers. We are sold out until May 1. Write at once if you wish May chicks. May chicks make ideal winter layers. Catalog. Freshlaid Farm, Colfax, Wash.

WHITE LEGHORN BABY CHICKS FROM heaviest laying stock. Booking orders now for spring, 1922, delivery. Safe arrival live, vigorous chicks guaranteed. Prices on request. Reliable since 1898. Must Hatch Incubator Co., 445 Seventh st., Petaluma, Cal.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

265 ACRES TO TRADE FOR SOUTHERN OREgon property; hay, grain, part river bottom; close in; springs for stock. Box 7, Midvale, Idaho.

360 ACRES, PART IRRIGATED; UNENCUMbered; with stock and machinery; trade for smaller place. Tom Black, Leahy, Wash.

TO TRADE—80 ACRES IRRIGATED LAND for stock ranch. E. Coulter, Burley, Idaho.

TRACK'S END

By HAYDEN CARRUTH

A Stirring Story of Adventure

(Copyright by Harper & Bros.)

CHAPTER XIX. (Continued.)

It was this day, March 15, that there began the big thaw. I could not hope spring had come to stay, and that there would be no more winter weather, but it gave me hope that a train might get through. I needed hope of some kind to keep up my spirits, because I felt that with a little good weather I could look for the Pike gang again. If I could have been sure that the train would come first I should have been gladder to see the thaw than anything else in the world; as it was I wished it might hold off till I could feel that spring had come in earnest.

The 15th was warm, but the snow melted very little. The next morning came the chinook. It was straight from the northwest, where all the blizzards had come from, but it was warmer than any south wind. All day it blew, and the snowbanks disappeared as if they were beside a hot stove. Before night there was a hole in the roof of tunnel No. 3. When I went to bed there were patches of bare ground and pools of water in the square.

The next morning the chinook was still blowing. It had been eating away at the snowbanks all night. I saw the top of the stronghold haystack from my bedroom window. Tunnel No. 1 had caved in. All day the wind kept up. By night the tunnel system was nothing but a lot of gaping cuts in the snow. The drifts had settled so much that the windows and doors were exposed, and it would soon be possible to ride on horseback along the street.

I had never seen a chinook wind before, of course, but Tom Carr had told me about them. This one was a strong, steady wind sweeping all day and all night straight from the northwest, and seemed to blow right through the drifts. I had rather have seen the snow going in any other way, because I knew this wind only followed the valley of the Missouri river and I was afraid that it did not reach far enough east to thaw out the cuts on the railroad so that the longed-for train could get through. But, on the other hand, it of course covered all of the country between Track's End and the outlaws' headquarters, and I knew that there was now nothing to hinder their coming, and I was afraid that if they did come I could not keep them off. This day the Indian came out for the first time. I tried to talk with him some more, but could not get much out of him. He cast some very black looks at me, as I supposed for my taking away the gun and, more important, probably, knocking the spigot off of the barrel.

This night I felt sure the outlaws would come again, and I did not go to bed at all. I stayed all night in Townsend's store, thinking to give them as warm a reception as I could. The next morning, the 18th, the chinook had stopped, but it was still thawing, though not so fast. There was scarcely any wind, but the sun was warm. I tried to take a nap after dinner, but I was too nervous. The prairie was half bare. The little drifts were all gone and the big ones had shrunk to little ones. There was a good deal of snow in the street yet, but it would be easy to ride through it. I walked about all day trying to think of what was best to do. I knew that I could not keep awake another night. At last I decided to try putting the Indian on guard part of the night. He had said (I thought that was what he meant) that the outlaws had stolen ponies from his tribe, and I concluded he could have no love for them, even if he had none for me. I found him in the store, but he was still sullen about the spigot.

"Want you to watch tonight for robbers," I said to him.

He only looked at me, so I repeated it, and added: "I will give you rifle, shoot if they come."

At this he grunted and said, "All right." He waited a moment and seemed to be thinking; then suddenly he raised his left hand tightly shut above his head, looked at it with half-closed eyes, and said, "Ugh! scalp 'em!"

It made my blood run cold to see that big savage standing there within arm's length gloating over an imaginary scalp, knowing as I did that he would probably enjoy scalping me quite as much. But I said nothing except to make him understand that he could go to bed if he wanted to, and I would wake him when it was time. I thought I would stay up as long as I could myself.

Twenty times that day I climbed the windmill tower and looked one way for the outlaws and the other for the train, but got no sight of either. The track was mostly bare as far as I could see, but I knew that even if the chinook had reached so far east many cuts around where Lone Tree had been and west even as far as the last siding, No. 15, would still be half full of snow and ice which would need a vast deal of shoveling and quarrying before any train could come through.

It was growing colder, and after the sun went down it began to freeze. I thought I could easily sit up till midnight, and after it was dark began patrolling the sidewalk like a policeman. The Indian had gone to sleep in his cellar. There was an east wind which felt as if it might bring snow. I was getting so tired that I could scarce drag my feet and was having another fit of the shivers thinking about the outlaws, when suddenly, as I stood in front of Taggart's, something popped into my head which I had not thought of for almost three months. This was the big can of powder inside the store.

I forgot my shivers and ran to the hotel for the lantern. Then I had another look at the powder can. It was like any tin can, only big, almost, as a keg. There was an opening in the top with a cover which screwed on. I was wondering if there was not some way that I could put the can under the floor of the bank and blow up the robbers if they tried to open the safe. I felt that the chances for beating them off again in a fight, with no fortifications, were very slim. You may think it strange that I felt so sure the robbers would come again, after having been beaten off once. I was not certain of it, of course, but I knew Pike was not a man to give up easily, and that he must have fully understood how much the snow helped to defeat them. I knew that since the weather had moderated a spy might have come in the night and discovered that I was alone and how defenseless the town was.

I had heard of fuse, but it happened that I had never seen any in my life. I remembered I thought it must be white and soft like the string of a firecracker. So I began to rummage through all the drawers and boxes for fuse. One of the first things I came across was a coil of black, stiff, tarry string, but I threw it to one side and went on looking for fuse. After I had hunted half an hour and found none, I gave up. As I stood there thinking a good deal discouraged, my eye lighted on the black coil again. My curiosity made me pick it up, and on looking at at one end closely I thought I could see powder. I cut off about six inches of it and touched one end to the lantern flame. There was a little fizz of fire and I stood holding it in my hand and wondering what it was doing inside, when suddenly there was a bigger fizz at the other end and a streak of fire shot down inside my sleeve to my elbow. I concluded that I had found some fuse.

In five minutes I had the powder and fuse in the bank. Then the hopelessness of putting it under the floor dawned upon me. I looked under the building and found a solid square of stones laid up beneath where the safe stood to keep the floor from settling. Everywhere else the water was six inches deep. I went back into the bank. Eight or 10 feet in front of the safe was a high counter running straight across the room. Under it was a wastebasket, a wooden box of old newspapers, a spool cabinet for legal papers, a copying press and some other stuff.

I stood the can of powder in the wastebasket. It was a good fit, with room enough around the outside to stuff in some paper to hide it. Then I put the basket in the box of newspapers. I cut the fuse in two in the middle, unscrewed the cover and put the ends of the two pieces down in the powder, balancing the copying press on top to hold them in place. I covered the whole thing up with newspapers. Then I brought an auger from Taggert's and bored a hole a little above the floor through the side of the building, and right on through the side of the building to the south, which stood so close that it almost touched the bank. There was nothing to either except a one-inch board and a thickness of lath and plastering. I passed the two lines of fuse through the two holes, and into the other building, which was a drug store. In the other building I tied a loose knot in the ends of the fuse and left it lying on the floor behind the counter and covered with a doormat.

Ten minutes later I had my Indian ally posted on the platform of the depot with his gun.

"If pony thieves come, shoot at them," I said to him. "I'll get up and shoot at them, too."

"All right, me shoot," he said; "take plenty scalp."

I went back to the drug store feeling better. There were now two chances for defeating the outlaws if they came; to beat them off, or blow them up with the powder. I lay down on the floor back of the counter with my head on the doormat. The windows were boarded up, and I felt sure that even if they came they would never find me here.

I woke up three hours later, as I had that first six months before in the Headquarters house, with Pike hold of my ear, and a man poking a smoky lantern in my face.

CHAPTER XX.

What the outlaws do on their second visit: with the awful hours I pass through, and how I find myself at the end.

The first thing I head was a loud laugh, and then:

"How are you, Jud?" said Pike. "Back again, you see. Hope yer feeling all right."

I saw I might as well make the best of it, though you may be sure I was half scared to death.

"Yes, I'm feeling pretty well," I said. "I was able to be about the last time you were here, maybe you remember."

Pike scowled at me. "Yes, that's so, you was," he said. "You stood us off in pretty good shape that time—you and the snow. We were fools not to find out that you were all alone. But we app'inted an investigating committee this time, and we're onto your game. Just excuse me, but I'll have to ask you to wear a little of Taggart's jewelry while we tend to some important business."

He pulled out a pair of handcuffs and slipped one of them around my wrist and shut it up so tight that it pressed into the flesh. Then he led me in front of the counter, slipped the other cuff through a brace under the front edge of the counter and then clasped it around my other wrist, leaving the short chain which connected the cuffs behind the brace, so that I was a prisoner. He pushed up a chair and said:

"Sit down and make yourself comfortable, Jud. I'll see if I can't find a handful of buttons for you, and you can put 'em on the counter and play checkers with your nose."

The men laughed at this, and Pike went on:

"We met your pardner out here, the dark-complected feller. He was a-riding off our pinto that we left here by mistake last winter, with our saddle and things, and a-leading your two broncs, so we just stopped him and gathered 'em in, and I reckon they're all our'n now, most of 'em, anyhow. And in consideration of our only shooting him around the edges careful like, he give us some valuable information, such as just where you was a-sleeping, Jud, and where we'd find the black-

"Jud, what do you say to comin' in with us?"

smith tools, and so forth. That's the way to get along with an Injun and have everything all easy-going—shoot 'im, very careful, around the edges."

Again they all laughed, and then went out the back door, which, I noticed, had a small hole cut in it over the bolt big enough to let in a man's hand. There were five of them, counting Pike. The windows were boarded up and it was dark in the store, but as the door opened I saw it was quite light outside and that it was snowing.

As I sat there in the dark unable to move and with the handcuffs cutting into my wrists you may believe I was miserable enough. I expected nothing short of being killed by the gang before they left. I saw what a fool I had been to trust the scroundrelly Indian even as much as I had. It was little satisfaction, however, to know that he had failed to get off with his stolen property even if it had fallen into the hands of a worse set of thieves. I soon heard them at work on the safe in the bank. Of course I thought of my fuse, but it was a dozen feet away, the other side of the counter, and I could see not a shadow of hope of getting at it.

I think I sat there as much as two hours, listening to the noise in the next building, when Pike came in and said:

"You'll be glad to hear, Jud, that we're getting along beautiful on that safe. We're a-going to blow the stuffing out of it the next thing you know. Reckon if you ain't particular we'll just borrow a sleigh we see out here and a set of Sours' harness for a couple of our horses when we go away, 'cause we think the specie may be a little heavy. Besides, we're calculating there may be some other stuff around town worth taking off—Winchesters and such agricultural and stock-raising implements," and he laughed. He seemed to be in very good humor.

He went back, and for another long while I heard nothing but steady drilling on the safe and a little of their talk, though I could not catch much of that. Sometimes, too, I could near Kaiser barking. He was locked in the hotel, and I thought he knew I was in trouble and wanted to get out and help me.

After what seemed hours Pike came in again.

"We blow 'er open now very shortly," he said. "A reg'ler little Fourth o' July celebration of our own, hey, Jud?" Then he laughed and went on: "We need that money and you bet it's going to come handy." He looked at me, came closer with the lantern, and said:

"Jud, what d'ye say to coming in with us and having your share like a man? You're a good one, if you are young, and we can find plenty of work for you, and always you get your share."

"No," I said, "I don't care to."

He looked at me sharply a moment and then went on:

"Just as you please, of course. But me and the boys was talking it over and we calculated it was the best way to dispose of you, a pile the best for you and some better for us."

I had kept looking straight into his eyes, under his big eyebrows. "No," I said, "I won't do it."

"Oh, take your choice," he answered, "take your choice. Just as you think best, of course. Only you know the old saying about how dead men don't tell any tales. And if you come in with us you get your share, just the same as if you'd done your part of the work."

I said nothing. He waited a minute, then went out and shut the door. I sprang up and pulled and wrenched at the brace with all my strength. The handcuffs cut into my wrists, but I did not feel it. The brace stayed as firm as ever. I sad down weak and trembling with my last hope gone. A minute later there was a loud explosion in the bank, which shook the building I was in. Next came a cheer from the men. Then voices, and I heard Pike shout:

"It's all afire here—bring a pail of water, Joe!"

The well windlass creaked and I heard a man start in from the back. Next I heard Pike say, "We'll soon fix that fire," then came an explosion and a crash, like an earthquake, and the wall came down upon me, and the counter came over and I was half under it. I heard the cries of the men, and, wriggling about, I got out from under the counter and found my hands free from the brace, and the snowflakes coming in my face through where half the side of the building had been blown away.

(To be continued.)

Bits of Fun for Everyone

Fish Won't Bite "Patience."

To illustrate her point the teacher drew on the blackboard a picture of a small boy sitting on the bank of a stream fishing.

"You see this boy," she said, beaming on her pupils. "He is fishing. He must be prepared to sit and wait. He must have patience."

For a little while longer she dilated on the beauties of being patient. Then came the time for her to test her scholars.

"Now, can any of you boys tell me what we need most when we go fishing?" she invited.

Like one voice came a chorus from the class:

"Bait!"

Auntie Policeman.

Mrs. Sharp—Did you have any visitors while I was out last evening?

Maid—Yes, ma'am; only my aunt.

Mrs. Sharp—Well, next time she calls tell her not to leave her pipe and tobacco on the piano.

Evening Clothes.

Author—Well, the evening wore on——

Friend—It did, eh? What did it wear?

Author—If you must know, the close of a summer day.

Two Teeth Named Kate.

Stranger—Could you tell me if there is a man living in this hotel with one eye named Bill Jones?

Clerk—Maybe I can help you. Do you know the name of his other eye?

Insulting.

"We had not been hunting long when there lay a rabbit dead at my feet."

"What had it died of?"

Dairy Barn on Walla Walla College Farm

Any bovine might point with pride to a home such as this on the Walla Walla college farm at College Place, and both the heifers in the foreground and the milking cows which were resting in the shade on the other side of the barn when the picture was taken, appeared perfectly satisfied with their quarters. The barn is 44x115 feet in size and thoroughly modern, and to a lover of the neat and clean in dairy barns it is about as easy to look at as a dairy barn could be.

The herd of about 50 Holsteins which occupies it under the care of Herdsman James Schram includes a number of daughters of two unusually well bred sires, College Belle Mercedes and Baumheim Johanna De Kol. The former, now 4 years old, is a 38-pound son of a 35-pound sire and a grandson of Sir College Cornucopia. His dam, a granddaughter of De Kol Burke, is by the same sire as King Segis. The Baumheim bull, now coming 5, is by Mutual Piebe De Kol and out of Raphaella Johanna Aaggie 3d, the 30,000-pound cow which was bred by John L. Smith of Spokane. The main crop of calves is by "College Belle," but such daughters of the other bull as have appeared are about as fine as anything in the herd.

There are 60 acres of valley land in the college farm, which is but a short ride out of Walla Walla in one of the most beautiful sections of that famous district.

Live Stock Conference

(Continued from page eight.)

there was a great difference in his attitude toward the man who conducts his business in a prudent and efficient way and the man who practices slipshod and unsafe methods. He emphasized the point that it is absolutely necessary that a bank protect itself in every loan that it makes, because any suggestion of insolvency on the part of a bank immediately affects all of its depositors.

The essentials in the purebred live stock business were discussed by Dean E. J. Iddings, of the agricultural college of the University of Idaho. His address was followed by a discussion in which a large number of those present took part. C. M. Hubbard, live stock extensison specialist at the state college, led the discussion.

Would Combat Rabies.

Having received word from the state department of agriculture that rabies had developed to a menacing degree among the coyotes in Douglas, Grant, Adams, Franklin and Benton counties and that the funds appropriated for the use of the United States biological survey in this state for the extermination of these predatory animals had been withdrawn, the conference adopted a resolution as follows:

That the live stock men of Washington assembled in Spokane this 22d day of February, 1922, in attendance at the sixth annual northwest live stock conference most earnestly urge upon the United States biological survey and the senators and representatives in congress from the state of Washington that every effort be made to secure sufficient appropriations to permit the work of exterminating rabid coyotes in central Washington to be expedited in every possible and practical way. Be it further resolved, that a copy of this resolution be transmitted to our senators and representatives in congress and to Dr. E. W. Nelson, chief of the bureau of biological survey, United States department of agriculture.

In connection with the live stock conference three live stock sales were held. A consignment swine sale occurred at the Union stockyards Tuesday afternoon, with a consignment Shorthorn sale at the same place the following afternoon. The third annual Shorthorn sale of the Day & Rothrock company occurred at Sprague on the day following the sale. These three sales will be reported under separate headings.

GUERNSEY CLASS LEADER.

LaFrance of Bralee, a Guernsey senior 3-year-old heifer owned by Dr. A. McRae Smith of Bellingham, Wash., is now one of the "class leaders" of the Guernsey breed. That is, her record puts her among the 10 highest in her class. LaFrance of Bralee produced in a year 594.58 pounds of fat and 10,507 pounds of milk, and carried her calf not only the required time for the double letter class, but 274 days. She is a half sister of Gladiola of Bralee, who is also a class leader, and both are daughters of Gladiola's May King. This bull has only four daughters, and two of them are class leaders.

Two Streams of Profit

Cash Income every day

Bank Account

Buying Power

CREAM TO SELL

SKIM MILK TO GROW ANOTHER CROP

Calves

Pigs

Chickens

No matter what your system of farming may be or where you live, you need a De Laval Separator and some cows.

Cows furnish the best market for your feeds, and they keep the fertility of the soil on your farm.

Then the De Laval separates the cream, which brings you in a steady cash income, and leaves the skim-milk in the best condition for feeding calves, pigs and chickens.

This is the surest, safest and most profitable system of farming—and the De Laval Separator has made it possible. It is the original separator, skims cleaner, lasts longer, turns easier than any other. There are over 2,500,000 De Laval Separators in use the world over—about as many as all the rest put together. The De Laval has always led in every important separator improvement and is recognized everywhere as the world's standard.

You may be wasting enough cream to pay for a De Laval by using a worn-out separator or by hand skimming.

EASY TERMS

More Silage on Less Power

THROWS AND BLOWS

P. B. Messick, Middletown, Del., writes, "We used your L-16 3-knife Papec with a Fordson tractor in 1919 and did excellent work, but it seems there is no limit to the machine's cutting capacity, as this year we put 140 tons of silage away in 14 hours and then did not keep her full."

The powerful Papec is guaranteed *to cut and elevate more silage*, with the same power, than any other blower cutter.

Write for free catalog. It shows why the Papec is supreme with men who know. If you own a silo or intend to buy one this year, state the size, also your dealer's name and address. We'll mail you *free* 50-page Account Book, worth a dollar to any farmer.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Family Circle: Let me once more urge you to give name and address with every letter. Sometimes I am asked a question that I can't reply to through the paper for various reasons; often I am asked for information which I could and would give in a personal letter by return mail if I had the address, whereas when I must reply through the paper it is likely to be two weeks or more before it can be done. Under such circumstances it must seem a long time to the one who wants the information. Also let me urge that names and addresses be written very plainly. Most of you do write plainly, but sometimes I must waste much valuable time studying out addresses. You never need fear that I shall print any names if the writer objects.
ALICE W. BARLAND.

Dear Mrs. Barland: I see that some one has asked for a recipe for curing bacon, ham, etc. I will give the following:

For every 100 pounds of trimmed meat use eight pounds of fine salt, two pounds of brown suger, one and one-half ounces of black pepper, one teaspoon of pulverized salt peter; mix together well. If hams and shoulders are large, take a butcher's steel and run through the thick parts in four or more different places, then rub in well the salt mixture and place on a shelf or table for 20 or 25 days. Wash off in very warm water and hang up and allow to dry for 24 hours, then begin to smoke. The first two days have very little fire, use green alder or vine of hard maple and continue to smoke for 10 or 12 days, and you will surely have a good article.

If you want to keep your meat through the summer pack it in a box, using a layer of shelled corn or oats to a layer of meat and cover well. J. H. OSBORN.
Ashford, Wash.

Dear Mrs. Barland: We have been taking THE FARMER for six years and I read every bit of it.

I am sending you a few recipes which are very nice:

Fruit cheese: Grind together one pound each of raisins, figs, dates, currants and blanched almonds, mix well and press into a pan, set away for a week, then cut the fruit in squares and dip into melted chocolate. MRS. E. W. BOWEN.

(Mrs. Bowen sends other candy recipes, which will appear at some other time. The one given above would be nice to put as a surprise in a child's lunch for school, as it would be better than candy and as satisfying.—A. W. B.)

Dear Mrs. Barland: I am a young woman with a splendid husband and three children, two boys age 3 1-2 and 2 years and a girl just 2 months old.

I have received a great deal of help and encouragement from the Circle and I should like to hear from any of the sisters living in Curry county, Oregon. We are anxious to learn about homestead lands and living conditions in that part of the country.

I am sending my recipe for raisin cake; it is a favorite with us.

Raisin cake: Boil together for three minutes two cups of white sugar, one cup of seedless raisins, two large tablespoons of shortening and two cups of water. When cool add one heaping teaspoon each of soda and salt, one level teaspoon each of cinnamon, cloves and nutmeg and three cups of flour. Make the dough rather stiff and bake in a moderate oven about 35 minutes. MRS. E. G. SEELY.
Cottage Grove, Ore., Box 384.

Dear Mrs. Barland: I, too, have been reading the Family Circle and always enjoy the "helps." I have tried some of the recipes given and have had success, so will offer the sisters this cake recipe, so excellent for school lunches.

Burn one-half cup of sugar until it smokes, then add one-half cup of cold water, set aside to cool. Cream one and one-half cups of sugar, one cup of shortening, two eggs beaten separately, one cup of cold water, three and three-fourths cups of sifted flour with one rounded teaspoonful of baking powder and, lastly, add the one-half cup of burnt liquid with one level teaspoon of soda dissolved in the liquid. This makes a large cake and is very nice.

Here is something else so well worth knowing that I thought to pass it along: For oil to use for brightening furniture and also for a dustless mop I use equal parts of crude paraffin oil and benzine. These are cheap and I am sure you will like to use the combination. R. W.

Mrs. C. R.: You ask how to get rust out of table linen. Apply salt and lemon juice and lay in the sun. You will soon see a method for bleaching dish towels and unbleached muslin on the Circle page, perhaps before you see this. A. W. B.

Dear Mrs. Barland: I saw a question some time ago as how to restore old and faded furniture. I have never seen anything better than common floor oil applied with a woolen cloth. It is also good to restore faded wood work.
LIZZIE STEWART.

Another floor finish: To one gallon of linseed oil add five ounces of beeswax and apply plenty to the floor while good and hot; when dry paint the floor and you will have next thing to a hardwood floor.
Sisters, Ore. MRS. N. J.

Here is still another, said to be cheap and good, wears well, dries quickly and cleans easily:

Five pounds of yellow ochre, two pounds of whiting, one-half pound of sizing glue; dissolve the glue, stir ochre and whiting into one gallon of water, add dissolved glue, apply to the floor with a brush then go over the floor with boiled lin seed oil. MRS. W. S. K.
Oregon.

Dear Mrs. Barland: I would like a recipe for a solid cake, rich with fruit and eggs, suitable for children's lunches.
MRS. I. W. B.

Plain fruit cake: Two cups of brown sugar, one cup of molasses, one cup of butter or other shortening, one cup of sour milk, one cup of coffee, four eggs well beaten, one nutmeg or one teaspoon of ground nutmeg, one teaspoon of cloves, two teaspoons of cinnamon, two teaspoons of salaratus dissolved in a little water, two pounds of raisins or one pound each of raisins and currants carefully washed and added to five cups of flour, shaking well into the flour. This keeps the fruit from sinking to the bottom of the cake. Bake in two good-sized loaf tins, with a slow fire, for at least an hour. Place a greased paper on the bottom of the tin and slip an asbestos mat under the pans before they begin to bake if your oven bakes fast on the bottom. Much depends upon the careful baking of this cake for its goodness. It will keep a long time in an earthern jar well covered and grows better with age. Don't use the very black molasses. Sorghum is good or any of the light colored kinds. A. W. B.

I will give you something else fine for lunches:

Meat loaf: Two pounds of good hamburger steak (no poor cuts), one-fourth pound of pork sausage. Soak in two cups of cold water six slices of bread toasted till dry as crackers, grate or put through meat grinder one medium-sized onion, place meat, bread and onion in a pan large enough to permit of mixing well and add one teaspoon of salt and same of sage and mix thoroughly and mold into a long loaf and bake slowly till done, about an hour. You can spoil it by baking too long or too rapidly. This is fine hot and slices well for sandwiches when cold, and, best of all, doesn't cost very much for what you have. A. W. B.

Dear Mrs. Barland: To harden a soft wood floor use the following:

For a new fir floor, which must be perfectly clean, get enough raw linseed oil to cover it, heat until bubbles appear on the top, but do not boil; pour into the oil any desired color stain, and mix; apply to the floor while oil is hot. Do not use a can or pail with a soldered bottom, as the hot oil will melt it.

After the oil is on the floor 30 minutes wipe off any remaining on the surface with a dry cloth and get off as much as you can. Let the floor stand for five or six days, then take orange-colored shellac and apply on a few boards at a time and hurry, or the seams will show. Use care and don't splash the shellac when you lap, but use your brush fast and get it all the same thickness. Shellac dries so fast that much depends upon the skill of the one applying it. After the shellac is thoroughly dry apply a coat of clear varnish and let dry. If you want your floor finished in natural color leave out stain entirely and apply just the hot linseed oil and use clear-colored shellac and clear varnish and follow same directions as given above. The ready mixed stuff is all right to touch up old furniture, but for a good floor finish it falls short.

To clean silver, cut the skin from a raw potato and dip in common baking soda and you will be surprised at the result.

For the mothers whose children quarrel and fight try my method. I have five children and my two oldest, 11 and 9, fought often and it seemed whipping did them no good. The fighting began one day when it chanced I had a lame arm and I dreaded the exertion of punishing them, so I gave each a good whip and made them fight for an hour. It has never happened since; the nearest was an argument which, when nearing a fight, ended with: "We must quit this or mamma will make us fight." HARRIET.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

If you have occasion to look over the home or the grounds of some stranger, you note the neatness or the shiftless appearance of the place.

Dr. Copeland.

We can always find the defect in the homes of other persons. Somehow, it is harder to discover our own shortcomings.

It is because of this all-too-common human weakness that in the army and navy there are regular "inspections." At these times the commanding officer makes a tour of the tents, the barracks or the ship, examines the beds or the hammocks and the bedding, the personal equipment of his men, the state of the bathing quarters and latrines and the general cleanliness of the kitchen and the men themselves.

Last summer, when I was crossing the ocean, the captain of the vessel invited me to go with him on his daily tour of the ship. He visited every part of the great liner, and called attention to every sanitary lapse and physical defect.

It would be a good thing if the head of each household—or better still—one member of the family in turn, should make a weekly inspection of the buildings and grounds. This inspection, so far as the house is concerned, should extend from cellar to attic.

The cellar should be dry, clean and sweet in smell. The floor should be free from litter. There should be no piles of rubbish, newspapers or firewood. Everything should be off the floor, so that rats and mice can not find convenient resting places. The windows should be screened, and there must be no wet places where mosquitoes can breed.

The same precaution should be observed as regards the attic and all storerooms.

Is there a covered garbage pail, which is frequently emptied and scalded out at regular intervals?

Are the floors under the beds and in out-of-the-way places free from dust and lint?

Are the bed slats and side pieces free from dust? How often are the beds taken apart and washed?

Are the woodshed, back yard and outbuildings free of litter? Fires, the breeding of vermin and other menaces to life and health are guarded against by such vigilance.

Is the barn free from litter, cobwebs and dust? Is the litter carried a long way from the stables? Are the walls whitewashed and the place kept clean?

We are so used to our own surroundings that it seems foolish to talk about "regular inspections." But let's try it once, anyhow.

I know that many families will improve in health and vigor when frequent sanitary inspections are as much a part of our lives as fire drills are now considered a part of school life.

A CORRECTION.

On the Family Circle page of THE FARMER of the issue of February 16 there appeared a recipe for making cream puffs. This recipe called for, among other ingredients, one cup of butter. This should have read one-half cup of butter

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.
Wells & Richardson Co., Burlington, Vt.

Washroom Off From Kitchen

By a slight alteration in many farm homes the back entrance may be arranged so that the men folks will not have to tramp through the kitchen before removing their boots and overalls, claims Miss M. Minerva Lawrence, extension home management specialist of the Washington State college.

There are two methods that can be used. One way would be to have a back hall, with a door leading into the kitchen and another to the washroom, or making the entrance hall a washroom. Whether this washroom be off to one side or the entrance hall built large enough for a hall and washroom, it should have sufficient space to hang all work clothes and take care of the dirty boots.

Another plan would be to have two back entrances into the kitchen. One for the housewife, the other leading into a washroom and then to the kitchen, for the men of the house. The washroom should have a place for a wash basin or running water where possible, so the men could clean up before entering the kitchen.

The kitchen should not be the dividing place for the mud of the farm and the comfort of the home, but this should happen before reaching the housewife's workshop.

CONVENIENT WOOD BOX.

A very convenient wood box can be made by cutting a hole in the wall and building the box in on both sides with lids on the outside as well as in the kitchen. In this way the wood can be placed in it without carrying it through the door. A box of this kind will not only eliminate much time and labor, but will also avoid the scattering of dirt on the kitchen floor.

Harry Gibson, R. 5, Seattle, Wash.—Good luck and success to what I believe is the best farm paper.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3888. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 4 1-2 yards of 44-inch material. The width of the skirt at the foot is 2 1-4 yards. Price 10 cents.

3471. A pretty dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The width of the skirt at lower edge is two yards. A 38-inch size will require 4 5-8 yards of 44-inch material. Price 10 cents.

3899. Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 5 3-4 yards of 42-inch material. The width of the skirt at the foot is about two yards. Price 10 cents.

3596. Ladies' apron. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 4 1-4 yards of 36-inch material. Price 10 cents.

3517. Work or morning dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. For a medium size six yards of 36-inch material will be required. The width at the foot is 2 1-4 yards. Price 10 cents.

3875. Child's set of short clothes. Cut in five sizes: 1, 2, 3, 4 and 5 years. Size 4 requires for the dress 2 3-8 yards, for the petticoat 1 5-8 yards, for the combination 1 1-2 yards of 36-inch material. Price 10 cents.

3874. Boy's suit. Cut in four sizes: 2, 3, 4 and 5 years. A 4-year size requires 1 3-8 yards of 27-inch material. Price 10 cents.

3594. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size will require 3 1-2 yards of 40-inch material. Price 10 cents.

3626. Junior's dress. Cut in three sizes: 12, 14 and 16 years. A 14-year size will require 4 1-8 yards of 27-inch material. Price 10 cents.

3739. A pretty negligee. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 5 5-8 yards of 36-inch material. For sack length 4 7-8 yards will be required. Price 10 cents.

3881. Ladies' skirt. Cut in six sizes: 24, 26, 28, 30, 32 and 34 inches waist measure. A 28-inch size requires 2 5-8 yards of 36-inch material for the skirt, and 3 5-8 yards for the tunic. The width of the skirt at the foot is about two yards. Price 10 cents.

3883. Ladies' waist. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3 1-4 yards of 27-inch material. Price 10 cents.

High Points in News of the Week

The three outstanding problems at the national capital during the past week continue to be the soldiers' bonus, the international treaties proposed by the recent conference on the limitation of armaments, and the offers made by Henry Ford and others for the lease of the government's Muscle Shoals nitrate property.

The greatest part of the opposition to the early ratification of the seven treaties proposed has been based upon the belief on the part of some senators that the so-called four-power treaty would require the United States to take up arms in defense of the rights of another nation in case of a dispute. With a view to eliminating this opposition and at the same time making it clear that the treaty as agreed upon at the conference does not make such provision, a "reservation" is reported to have been agreed upon by President Harding and the American delegation to the conference. The reservation, as it is now proposed, reads: "The United States understands that under the statement in the preamble, or under the terms of this treaty, there is no commitment to armed force, no alliance, no obligation to join in any defense."

* * *

The situation surrounding the proposed soldiers' bonus legislation has been becoming more and more complicated. Recently President Harding and Secretary Mellon of the treasury department made formal statements that they considered a general sales tax as the only equitable means of raising the money to pay the proposed bonus of several billion dollars during the next several years. The committee of the lower house, having in charge the matter of drafting the proposed bill, last week voted overwhelmingly against the sales tax as the means of raising the money. A new proposal, as a way to raise the money, has been suggested by Representative Andrews of Nebraska. He recalls that in 1836 the United States government had some money on hand with nothing apparently to do with it, and that it turned it over to 26 states to be kept by them "until otherwise ordered by congress." He now recommends that congress order that these 26 states pay this money back, with interest at 4 per cent for the 86 years that it has been kept out, and that this money be used to pay the bonus. The states having this money are all east of the Rocky mountains and nearly all east of the Mississippi river. Another new proposal, during the week, was that the manufacture and sale of beer be again legalized and a tax of 20 cents per gallon be placed on it. It was estimated that this tax would raise over $600,000,000 per year, with which to pay the bonus. It would require a 20-cent per gallon tax on over 3,000,000,000 gallons of beer to raise this amount.

There has been some talk of postponing all action on the soldiers' bonus bill until June or later, but the committee working upon it expresses a desire to draft and enact a bill in the near future. There is some talk of enacting a bill providing for the payment of the bonus without any definite provision for raising the money. President Harding has gone on record as firmly opposed to this plan, and might be expected to veto such a bill if it were passed.

Considerable opposition as well as favorable sentiment toward the proposed bonus has been created throughout the United States. The opposition is found both in and out of the American legion. A branch of the legion in New York city has issued a challenge to National Commander MacNider to debate the question publicly. Commander MacNider is leading the fight for the bonus. The spokesmen for the New York legion declare that the government should bend its full effort toward compensating and caring for injured veterans of the World war, but should not endeavor to raise the money for a bonus to able-bodied veterans.

* * *

The debate continues pro and con on the proposal of Henry Ford to lease for a period of 100 years the Muscle Shoals nitrate project. The government is considering a number of applications from others than Mr. Ford, but it appears that the Ford offer is the one about which the arguments center. Gray Silver, representing the American farm bureau at Washington, D. C., last week appeared before the committee that is considering the problem and went on record strongly in favor of accepting the Ford offer. It is understood that Mr. Ford has agreed to a number of additional provisions in the proposed contract between him and the government. One of these provisions is a guarantee that he will operate the plant so as to produce a constant supply of fertilizers, the minimum amount to be specified in the contract. Another is that this fertilizer shall be delivered to the farmers at such price as to limit Mr. Ford's profit to 8 per cent.

* * *

In an address before a convention of the Nebraska nonpartisan league at Lincoln last week, President A. C. Townley is quoted as saying that the nonpartisan league can not win any lasting victory as long as it pursues the policies that it has in the past, and is pursuing at the present time. The press dispatch quotes him as saying that "too many rascals and incompetents were put into office by the league. It went out into the woods and got some mighty green timber, some of which afterward proved pretty rotten, and tried to teach him to play politics against professionals. So far as I am concerned, the men we brought from the woods as green timber can go back. The league found itself worse off when it got its own men into office because they were utterly untrained and some of us were unable to train them because we did not, ourselves, know practical politics of statecraft."

* * *

Senator Capper of Kansas has been chosen officially as chairman of the agricultural bloc in the senate. Senator Capper succeeds Senator Kenyon of Iowa, who recently resigned from the senate to accept a federal judgeship.

Powell Was Leader

The death of G. Harold Powell, general manager of the California Fruit Growers' exchange, which occurred Sunday, February 19, removed the foremost figure in agricultural cooperation in America and one of the leading men in modern industrial enterprises. He was in large degree responsible for the great development of the marketing organization of which he has been manager for more than 10 years, and was a strong influence in the general growth of cooperation in California, which has become known as the leading cooperative state in the Union. His influence had become national, even the organization of the United States Grain Growers, Inc., the farm bureau's grain marketing body, being formed in considerable degree upon the basis of his experience and advice. He was one of the leading witnesses before the committee of 17 that drafted the grain marketing plan.

Mr. Powell has left much written record of the growth of the cooperative movemeit. His leading book is "Cooperation and Agriculture."

Mr. Powell's death occurred suddenly and unexpectedly at dinner time, when he appeared in the best of health. Some form of heart trouble is believed to have been the cause. He had but recently returned from the agricultural conference at Washington, D. C.

Mr. Powell was born in Ghent, New York, February 8, 1872. He was reared on a farm and graduated from Cornell university in 1895, specializing in horticulture and entomology. Mr. Powell joined the staff of the United States department of agriculture in 1901, and was assistant chief of the bureau of plant industry from 1909 to 1911. In 1911 he was appointed as general manager of the California Fruit Growers' exchange.

The Diener Tomato

Increase your tomato yield one hundred per cent by raising the new DIENER TOMATO. 30-40 tons of ripe fruit to the acre.

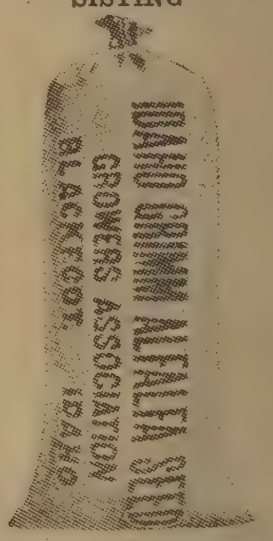
This tomato was raised last year all over the United States and Canada with the greatest satisfaction.

As smooth as an apple and of a magnificent dark red color. Single tomatoes weigh up to 3 lbs. each. The flesh is more solid than that of any other tomato. The fruit contains very little seed and is solidly filled out. This tomato is free of the acid taste, and for dehydrating, catsup and canning it is the best tomato in existence today.

The DIENER TOMATO is blight-resisting as well as drought-resisting. It will not crack from the rain and will not rot while lying on the ground in wet weather. This tomato will grow in almost any kind of soil and it commences to ripen the first part of August.

It is the greatest novelty in the tomato line, and it will soon crowd out the present varieties from the market by its far superior quantities.

Price of the DIENER TOMATO SEED: Sample pgk., 25c; one-quarter of an acre pkg., 50c; one acre pkg., $1.50.



Our 1922 catalogue will be sent upon receipt of 25c in stamps, which amount may be deducted when sending in first order.

BETTER GARDENS
EASY TO KILL WEEDS AND MULCH THE SOIL

BARKER WEEDER, MULCHER AND CULTIVATOR

Don't do garden work the slow, backbreaking way. The BARKER makes the finest gardens possible—quickly, easily. Simply push along rows (like lawn mower)—8 blades revolving against underground knife destroy the weeds and in same operation break the crust into a level, porous, moisture-retaining mulch. Aerate soil. "Best Weed Killer Ever Used." Has leaf guards, also shovels for deeper cultivation. A boy can run it—do more and better work than 10 men with hoes.

Read the "Want Ad" page this week for good offers of all kinds.

Daisy Case, 10 years old, has good times. In the winter she goes skating and in the summer she swims. She says she likes to swim. Daisy has a little pony named Kid. She is very fond of Kid. Her brother gave him to her. Daisy lives in western Washington.

Here is another letter from the Case home in western Washington. This one is from Leone Case. Leone is 5 years old. She says she got four valentines. Some time Leone is going to send us her picture. (We will be glad to get it).

We have a little letter from Billy Case, who is 4 years old. Billy lives in northern Pierce county, Washington. He likes The Junior Farmer. (Write us another letter, Billy.).

Merna Van Leuven says they had a valentine box at school and lost only five minutes after school called at lunch time. Doc and Jule are the names of two horses at the Van Leuven home. There is a kitty named Tabby. They had another cat named Tabby, too, but he ran away. Merna won't be 10 until June 17, 1922. She lives near the Colville river, in northeastern Washington.

We have a little note from Jerome Burbank, who lives in eastern Grant county, Washington. He sent Aunt Nellie a poem about a dog named Spot. Aunt Nellie appreciates it very much. Jerome says he won a prize at school. We congratulate Jerome, don't we?

A cat named Pat and a cow named Tommy are Clohe Hancock's pets. Clohe is a new cousin with three sisters and two brothers. They live near the Methow river, in Okanogan county, Washington. Aunt Nellie is very glad to hear from Clohe. She was 9 years old May 19, 1921, and goes three miles to school.

Another new cousin for the Corner. What a family we are getting to be! This cousin is a central Washington girl and her name is Arlene Nehr. She says: "I live four miles from town. We have 10 acres of apple orchard. We have one Jersey cow and 75 chickens." Every time The Junior Farmer comes Arlene reads it. She likes the funny papers her aunt sends her, too. Arlene was 10 years old September 9, 1921.

Theodore Kores is a northwestern Washington boy and writes his second letter to the Corner. He says he likes The Junior Farmer very much. At school they had a Christmas program and he was in a play called "Mr. St. Nicholas." He has two brothers. At this home they have ducks. Theodore will be 12 years old October 7, 1922.

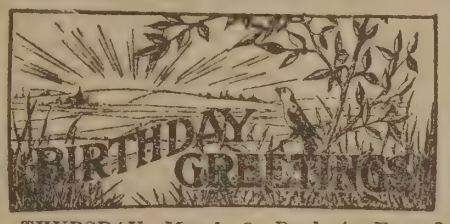
Lillian Peterson stayed home from school two days because she had a cold. She is a Yakima county, Washington, girl and her birthday is March 18. She says pussy willows will soon be out. Myrtle McCadden is her chum at school.

"We have six calves, five horses, 16 cows, two dogs and seven cats," writes Joe Staadt, Cowlitz county, Washington. Joe is in the fifth grade at school. His teacher is Miss Inez Vanderhill and he thinks she is a fine teacher. He says: "The girls say she is the best teacher in the world." She gives them intelligent tests to see how quick they are. After his lessons are finished Joe paints pictures. He has a printer set and a dictionary he got for Christmas. (Write another letter, Joe.)

Molly Litt of eastern Washington tells us a little story about the fairies. The story books have told you of the fairy folk so nice that make their leather aprons of the ears of little mice, and wear the leaves of roses, like a cap upon their heads, and sleep at night on thistledown, instead of feather beds. Molly will be 10 years old April 20, 1922.

We have another letter from the Litt home in east Washington. This one is from Andrew Litt, who will be 9 April 21, 1922. The following little verse, he says, was written by Phoebe Cary. Through young birds, in flying, fall; their wings grow stronger. The next time they fly, they can keep up a little longer.

Anna Thornton says she is sorry she waited so long to write this time, but every time she thought of it she was doing something else at school. She is busy at school every day. Anna says: "Tell all the cousins hello for me." Anna lives in southwestern Washington.



To remind the cousins to get up early in the morning Marie Litt, eastern Grant county, Wash., sends in this little story. Cock-a-doodle-doo. Wake up, boys and girls! You lazy, lazy children! Why do you lie in bed Wake up, Wake up! Cock-a-doodle-doo. Marie is sorry she hasn't a picture to send us. Her birthday is February 17.

"I have one brother; he is 3 months old, writes Maxine Ohmat. Maxine is 8 years old and lives on a fruit ranch. At school she is in the second grade. She has a pet kitty. (There was no address on this letter. If Maxine will send it to Aunt Nellie we shall see that The Junior Farmer is sent to her.—Aunt Nellie.)

"My name is Louise Scheel. I am 9 years old. My birthday is March 9. My little sister, Margaret, is 8. We both had a garden. We had beans, corn and a few flowers. We have nanny goats. Papa has 25 of them. My nanny's name is Daisy and Margaret's is Nelly. I have four brothers and three sisters. Some of them were born in Spokane, but I was born in Tacoma. I like the farm very well."—(We should like to send you The Junior Farmer, Louise, if we had your address, but it was not on your letter. Please send it.—Aunt Nellie.)

George Gugat says he is alone in his class at school and when he gets his lessons studied he can make pictures. He goes three miles to school and is in the fourth grade. George lives in Okanogan county, Washington. He was 10 years old July 15, 1921.

Jewel Field gave her little twin cousins, 8 years old, a birthday party at her home. Fourteen children came to the party and played from 2 until 5 o'clock. Jewel's birthday comes November 24. Her home is in Grant county, Wash.

THURSDAY, March 2—Paul A. Fox, 9 years old; Thurman Lawrence, 11; Harvey Lueck, 11; Edgar Van Ausdle, 10.

FRIDAY, March 3—Gracie Browne, 11 years old.

SATURDAY, March 4—Julia Lillquist, 10 years old; Elmer Prien, 6; Leona Reinhart, 10; Irene Waranka, 10.

SUNDAY, March 5—Arvo Larson, 11 years old.

MONDAY, March 6—Arlynn Mayfield, 11 years old; Clara Peterson, 11; Ida Stiner, 9; Pauline Manson, 9.

TUESDAY, March 7—Florence Torpey, 10 years old.

WEDNESDAY, March 8—Zelma Graham, 10 years old; Mabel Hamilton, 8; Franklin M. Smith, 11; Elizabeth Thomas, 10; Dorothy Timm, 10.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Daisy, Leone and Billy Case, Merna Van Leuven, Jerome Burbank, Clohe Hancock, Arlene Nehr, Theodore Kores, Dorothy Peterson, Lillian May Dunning, Preston Palston, Lillian Peterson, Cecilla and Ruth Stuhr, Wilber Van Leuven, Roy Norton, Bessie Pullin, Clairice Haxton, Bernice Almlee, Gladys Cook, Juanita Anderson, Marjorie Nettie Sutton, Clarence Newton, Augusta Lutz, Virginia Frances Littell, Emma Rennick, Hilda Thompson, Eo McCormick, Clarence Brado, Viola Waggoner.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

BILLY FEELS UNCOMFORTABLE.

Billy Mink was feeling uncomfortable. Yes, sir, way down deep inside Billy Mink was feeling uncomfortable. He was beginning to wish that he had not boasted so much the night before. He had said that he could do anything that any of the other little people who wore fur and lived in the Green Meadows or in the Green forest could do. Grandfather Frog had called him a boaster and had said that he knew some one who could do something that Billy Mink could not do, and that if Billy Mink would be at the Smiling Pool at sundown that night he would prove it. Billy Mink had had to say that he would be there, for, you see, Little Joe Otter and Jerry Muskrat were listening.

Now Billy Mink sat on the Big Rock in the Smiling Pool kicking his heels.

"I can run fast, swim fast, climb fast

Billy Mink Was Feeling Uncomfortable.

I can dive deep. I can jump. I can dig. I can follow a track with my nose, and can see in the dark," thought Billy Mink. The more he thought of all he could do the better he felt. One by one he thought of the little meadow and forest people whom he knew and what each one could do. Think as hard as he would, he could think of no one who could do anything which he couldn't do.

"There isn't any one," said Billy Mink right out loud. Just like that. "There isn't any one!"

"Chugarum!" said Grandfather Frog.

Billy Mink looked over to the big green lily pad where Grandfather Frog was sitting. Grandfather Frog was gazing solemnly up at jolly round Mr. Sun. There wasn't the teeniest, weeniest bit of a smile about Grandfather Frog's big mouth, and yet Billy Mink somehow felt that way down inside Grandfather Frog was laughing at him.

All at once Billy Mink felt more uncomfortable than ever, and he didn't feel a bit better when Grandfather Frog turned his back to him and began to sing in a deep voice that seemed to come from the very bottom of his stomach.

"Bragging tongues, so I've heard say,
For sure discomfort pave the way."

"Now, what do you mean by that?" snapped Billy Mink.

Grandfather Frog turned around and seemed very much surprised to see Billy Mink.

"Oh, nothing, nothing, nothing at all! I was just talking to myself," said he.

Billy Mink looked at him very hard, but Grandfather Frog looked as solemn as ever.

"Huh!" said Billy Mink, and slid down into the Smiling Pool. He swam across and started up the Laughing Brook, and as he went he heard Grandfather Frog singing once more. He stopped to listen, and this is what he heard:

"Pride runs on before a fall,
And doesn't mind its feet;
The one who wins a race keeps still
Till after he has beat."

"Huh!" said Billy Mink. But just the same he felt more uncomfortable than ever.

News of Improved Implements Given in Advertisements

The inventive genius of America is always at work improving the farm machinery without which economical production would be out of the question.

When a radical improvement is made in some implement how are the farmers of the country informed regarding it by the manufacturer? The answer is through the advertising columns of the agricultural publications.

Compare this issue of your state farm paper with some copy of a farm journal of twenty or thirty years ago and you will have a birdseye view of farm implement progress.

Perhaps some innovations have been adopted with which you are as yet unfamiliar. For news of these important matters read and re-read our advertising columns. And remember that we safeguard you in your dealings with our advertisers.

When you write them for additional particulars please say: "I saw your advertisement in The Washington Farmer."

Dairy Products

(Continued from page six.)

higher prices here for raw milk than elsewhere, holding the price at a higher level than ever before under similar conditions. We successfully survived these unfair tactics and we have no fears for our future existence.

I firmly believe we are now established beyond the ability of any outside force to disrupt us, and I am confident that the manner of our organization, which permits the equitable administration of the affairs of the association for the benefit of all the members, is a safeguard against internal dissention, which has proven the chief factor in the downfall of cooperative movements that have registered failure.

This story of our cooperative effort would not be complete if it failed to record the fact that we are members of the National Milk Producers' federation, with headquarters in Washington, D. C. I have the honor to be a member of the board of directors of that organization. It has in its membership practically every cooperative dairymen's association in the United States and its influence for the good of the industry is far-reaching. Every piece of legislation presented before congress that in any way affects the dairy industry is carefully scrutinized and the member associations at once advised of its character. The national federation has been assiduously working for the passage of the Capper-Volstead act, which has not become a law and which provides the proper protection for nonprofit cooperative farmer organizations. The national federation has been aggressively active on tariff legislation affecting dairy products and is hopeful of securing a 10 per cent import duty on butter, with tariffs on other dairy products in proper ratio.

The national organization is also bending every effort to have passed the Voight bill, which prohibits the interstate shipment of so-called "filled milk." The passage of this bill would practically result in the abolition of the manufacture of "Hebe" and similar bogus dairy products.

The president of the National Milk Producers' federation is Mile D. Campbell, a Michigan dairyman. Mr. Campbell is a retired lawyer, whose every heartbeat is for the dairyman and who is at once a capable and energetic leader and a genial gentleman.

The formation of the "farm bloc" in congress was the result of the combined efforts of the farm bureau, the national board of farm organization, the National Milk Producers' federation and other national farm bodies working in harmony and unison.

The United Dairy Association of Washington, for its members, has many plans for the betterment of conditions, to put into execution during the year 1922. It knows it will extend its membership and the field it now covers. At least two districts of importance will be organized during the present year. Other important plans in our program I am not at liberty, at this time, to divulge, but you can count upon finding this association in the forefront in any fight to protect and maintain the rights of farmers and farmers' organizations in a local or a national way. There is nothing romantic about such a venture as we have undertaken, and the record of what we have accomplished makes dry reading at best, but hidden in this dull record are a thousand worrisome details, seemingly small, but important, that faithful men wrestled with until they in some way untangled and solved them. the debt that is owed these men will never be fully realized and certainly will never be paid unless it be in the satisfaction that comes with conscientious effort and work well done.

Summer Fallow Culture

The Washington Farmer was pleased to receive a call from A. Allen of Mondovi, Lincoln county. Mr. Allen says that the farmers are greatly pleased over the results of winter wheat and that every bit of summer fallow around him has been put into winter wheat this fall. The farmers are finding that by proper cultivation the summer fallow can be kept in condition for seeding, even if there is not much of any rain.

"I did not believe this could be done," Mr. Allen said, "but I found it can be done, as I have done it myself this year. By plowing the summer fallow early, right after seeding, and immediately harrowing twice, then later in the season running over the land with the home-made rod weeder twice, my land was in condition for seeding for winter wheat even before the rain."

Some years ago the editor of THE FARMER made a trip to Mondovi with President Showalter of the Cheney Normal school. President Showalter was greatly interested in the Mondovi school, as the people were taking pains to make it one of the noticeable schools in that part of the country.

Being asked about this school, Mr. Allen, who is one of the directors, says they are about putting up a $7000 school house. They had $6000 raised, but need another thousand and are waiting for election before awarding the contract.

Many Farms Have No Chickens

Figures recently compiled show that on 14 out of every 100 farms in the state of Washington no poultry is kept. In other words, there are nearly 10,000 farms in this state that have no poultry even as a side line. Those who want to emphasize the popularity of the poultry industry may look at it from a more pleasant point of view by comparing the number of farms in the state that have no poultry with those that have no horses, dairy cattle, beef cattle or sheep. More farms in the state have poultry than do any other class of live stock, if poultry can be classed as live stock. On 21 per cent of the 66,288 farms in Washington there are no horses. Dairy cattle are absent on 24 per cent, hogs on 46, beef cattle on 85 and sheep on 93.

WHATCOM COUNTY UNIT AN EXAMPLE.

"Out of 1650 members, only 15 notified us of a desire to withdraw at the end of the year," said David McLeod of Bellingham, Wash., vice president of the Whatcom county unit of the United Dairy associations of Washington. "Where 22 months ago we had no rating," he added, "now our rating is as good as anybody's and if we want to borrow money it is easy." This is the largest of the county associations. Last year it received 22,682,974 pounds of milk. The prices received for all the products have been satisfactory and, best of all, as Mr. McLeod expresses it, no obligation has ever had to wait, but has been met promptly when due.

Localized Service Wins Friends

The "Old Timer" of Washington knows at first hand the peculiar conditions which surround farming and fruit growing in his state. With his own eyes he has seen great areas of sagebrush converted into flourishing gardens and orchards by the magic touch of irrigation. With his own hands, perhaps, he has helped convert the primeval forest into producing acres. You can't tell him that the farmer in an irrigated or cut-over section is coping with the same problems which confront a Michigan farmer who depends upon the rainfall for his moisture or a farmer in Iowa, where 95 per cent of the land is under cultivation.

Practically everything is different out here, he will tell you; so he appreciates the more the work of his state farm weekly, which is devoted to Washington alone. Very likely he has watched the development of this paper, for its beginnings date back to the time when farming in the Pacific Northwest was in its infancy. The Washington Farmer is the successor to the Ranch, established in 1894, the Pacific Dairyman, Horn and Hoof, and the Washington circulation of the Agricultural Age.

This state farm weekly shares with "Old-Timer" the distinction of having grown up with its field, and he is therefore justified in regarding THE WASHINGTON FARMER as an old friend—a fellow pioneer.

We have every confidence that you will continue to cooperate and repeat our request that you take thought as to your subscription renewal. Instead of waiting for a notification, mail in your order at least 60 days in advance of the address label on your paper. Tell your friends and neighbors about our cooperative plan and include their orders with your own. By all pulling together we can and will make 1922 a big year for cooperation. Let's do it!

Subscription Rates of The Washington Farmer:

$1.00 for Five Years 25 Cents for 1 Year. 50 Cents for 3 Years.

In Canada add 1 cent a copy for extra postage.

Mar. 2, 1922. .....1922.

QUALITY ON THE RANGE.

One of the big range cattle operators of Montana, J. H. Bray of Lakeview, believes that quality is just as essential on the range as it is in the breeding herd, and accordingly, through a recent purchase of 13 Aberdeen-Angus bulls from Congdon & Battles of Yakima, has increased to 36 head the number of purbred "doddie" bulls which he will run on the range next season. Mr. Bray operates in southwestern Montana, runs his cattle on the range during the summer and carries them through the winter on a ration of native hay only.

He now handles all three of the beef breeds, but is working into Angus exclusively as rapidly as possible. One reason for doing so is that they are hornless by nature and save their owner the disagreeable and expensive job of dehorning. He says he finds them the easiest keepers also and unbeatable as grazers and rustlers, particularly in severe weather.

NEW HOLSTEIN CALF CLUB MAN.

Earl J. Cooper, assistant state club leader of Wisconsin, has been employed by the Holstein-Friesian Association of America to take charge of its calf club work under the direction of President Frank O. Lowden. Mr. Cooper will begin his duties March 15, making his headquarters in the extension offices of the Holstein-Friesian Association of America at 910 South Michigan avenue, Chicago, Ill.

"Cut The Price" SAYS MELOTTE

MELOTTE, the Edison of Europe, manufacturer of the greatest Cream Separator the world has ever known, announces a sweeping reduction in prices. Labor conditions in general together with tremendous re-building and re-organizing efforts put forth by this big man of Belgium has resulted in cutting production costs to the bone.

And right now *at this particular time* exchange rates are extremely favorable. Take advantage of this condition while it lasts. Get the most for your American dollar. Buy now and save money.

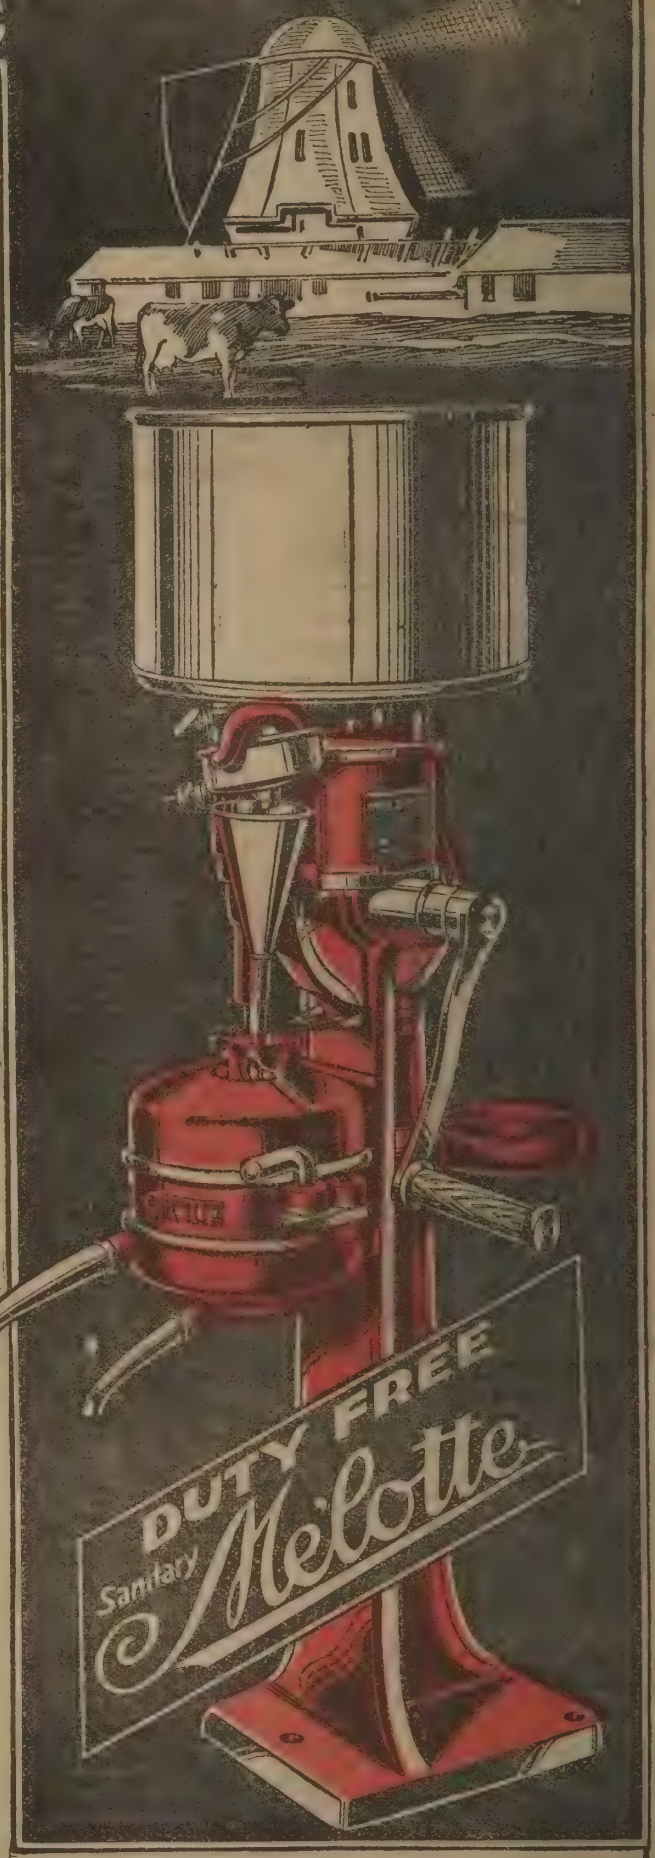
Before buying any separator find out how the Melotte has won 264 Grand and International Prizes and how, for efficiency of skimming, ease of turning, convenience of operation and durability—the Great Belgium Melotte has won every important European contest. Find out why 500,000 Melotte Separators are in continuous use today.

Belgium Imported MELOTTE

From Belgium to The Pacific Coast by Water

The increasing demand for Melotte Separators on the Pacific Coast has prompted us to open a Pacific Coast Office to receive direct shipments by water from Belgium. Because of this, farmers and dairymen all over the West now have a wonderful opportunity to save money in the purchase of a Melotte Separator. A Melotte can now be ordered direct from our Pacific Coast Office, which means a saving in time to you of one to two weeks. You are losing money every day you are without it, so send the coupon today to the Pacific Coast Office.

Self-Balancing Bowl



The Belgium Melotte is the only single-bearing-bowl separator made. This patented bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing*. It skims as perfectly after 15 years' use as when new. Positively can not ever get out of balance—can not vibrate and thus cause cross currents which waste cream by re-mixing with the milk. The 600 lb. Melotte turns as easily as the 300 lb. machine of other makes. Spins for 25 minutes unless brake is applied. No other separator has or needs a brake. The Melotte bowl has solved the problem of perfect skimming.

Our 15 Year Guarantee

Every Belgium imported Melotte Cream Separator is sold under an absolute, ironbound, 15-year guarantee. No Melotte is ever sold except under this guarantee. A guarantee written in plain English so that you can understand it. A guarantee that is 100% stronger than any other separator guarantee ever made. A guarantee that really guarantees something—upon which you can absolutely rely—an absolute protection to the purchaser, and which binds us to our bargain.

What U. S. Government Says:

Vibration of a cream separator's bowl will soon cost you more money in cream waste than the price of your separator. U. S. Government Bulletin No. 201 says that a perfectly true motion of the bowl is *absolutely necessary*. the bowl is the vital part of any separator—the part where the cream separation takes place.

$7.50 after 30 Days Free Trial

—NO MONEY DOWN—FREE TRIAL
—SMALL MONTHLY PAYMENTS—DUTY FREE

We will send an Imported Melotte Cream Separator direct to your farm on a 30 days' absolutely Free Trial—no deposits—no papers to sign—use it as if it were your own separator. Satisfy yourself that the porcelain bowl is as easy to clean as a china plate. Compare it—test it in every way.

When you are convinced the Melotte skims cleaner, turns easier, washes quicker, has one-half less tinware to clean, lasts longer than all others, then pay $7.50 as first payment and the balance in small monthly payments until the separator is paid for.

Send No Money!—Easy Payments!

After 30 days free trial, then send only the small sum of $7.50 and the balance in small monthly payments. The Melotte pays for itself from your increased cream checks.

You're not to send one cent until you've used this great Belgium Melotte and have made up your mind it is the machine you want. Keep it for 30 days and use it just as if it were your own machine.

Compare the Melotte separator with any other—test them side by side. Then send your milk to the creamery. Let *them* prove which separator skims the cleanest.

The Melotte Separator, *H. B. Babson, U. S. Mgr.*
Dept. 3233 2445 Prince Street, Berkeley, California
2843 West 19th Street, Chicago, Illinois

Without cost to me or obligation in any way, please send me the Melotte catalog which tells the full story of this wonderful separator and M. Jules Melotte, its inventor. Also send me your revised price list showing big reductions.

Pig Contest in The Farmer

Has Done Much to Stimulate the Hog Industry

To the Editor: Through the courtesy of Mr. Horace Addis I received a copy of The Washington Farmer, dated February 9, and hence this letter to you. I wish to congratulate you in offering a prize for the best letter on the hog as a farm byproduct. You have done much to stimulate the hog industry. It caused the young people on the farm as well as the older ones to think on this most important subject. Through its discussion it will be a big factor in causing a greater production of swine, so much needed at this time. It is teaching what we of the Portland Union Stock Yards are advocatingthe utilization of waste on the farm. If only enough hogs were kept on the farms of the three northwest states, i. e., Oregon, Washington and Idaho, to utilize the feeds which would otherwise go to waste, the supply of hogs would be very nearly adequate to demand, making money for the producer, and keeping in our home territory the millions of dollars that are being sent to the midwest states for hogs.

We believe there will be good profit in hog raising for a period of two or three years. The shortage in beef animals in the northwest will of necessity cause a greater consumption of swine products. Hog prices are very high now, and will continue so through the packing season. After this season is over there will in all probability be a slight decline in prices. The supply being short means strong competition later when receipts fall to proportions scarcely heavy enough for fresh pork demand. The demand for brood sows is greater and greater. Supply of stocker and feeder pigs is far short of demand. So, if we do not get overzealous and cause overproduction, we can not help but believe there will be good money in hog raising for as long as cost of production remains as it is now.

I have read with increasing interest the letters written in the contest. In awarding Mr. Hall the first prize you have made no mistake (as I see it). It would be almost an impossibility to improve on his letter. He has covered the case in a masterly manner, convincing the reader he has had experience and given the subject much consideration.

Just as I was closing this letter a copy of The Idaho Farmer, under date of February 9, was handed me. It shows that Mr. E. B. Snow of Indian Valley, Adams county, Idaho, won first prize in his state. I wish to say that my comments on Mr. Hall's letter apply equally to Mr. Snow's.

I am glad to see that you have secured gilts with which to make awards from the best herds in the northwest. I admire Mr. Wilson as a man, and as an advanced, constructive breeder. His herd is of the best of the Poland China breed.

Your Mr. Addis is to be congratulated on the very appropriate cover page of The Washington Farmer magazine of February 16. Mr. Addis is a much-appreciated booster for all classes of live stock.

Again congratulating you on the success of your endeavors, I remain, yours sincerely.

C. M. M'ALISTER,
Field Man, Portland Union Stock Yards.

A BIG LITTLE MISTAKE.

There is not much difference between a period and a comma, but the use of one where the other should have been used often results in a huge error in a printed statement. For instance, in a recent issue of The Washington Farmer it was stated that a Holstein cow belonging to Butchart Brothers of Sunnyside had produced 24,896 pounds of butterfat in seven days. That was some production, beating all past records and all future records all to smash. The truth about it is that there was a comma used where a period should have been. This cow produced just a little less than twenty-four and nine-tenths pounds of butterfat, or the equivalent of 31.12 pounds of 80 per cent butter.

Can Be Registered

By H. HACKEDORN.
(Department of Animal Husbandry, Washington State College.)

I would like to know if you cross a roan Shorthorn cow with a red Shorthorn bull, if the offspring could be registered as a thoroughbred? Also, what is the difference between whiteface cattle and a Hereford? J. W. T.
Miles, Wash.

The color of Shorthorn cattle is described as red, white and roan. The roan is a mixture of the red and white and is the preferred one. Spotted cattle are not popular, although they can be recorded. The roan color is the most popular and most breeders prefer to mate white cows with a red bull in order to get as many roans as possible, although it does not follow that this mating will produce roans. The offspring of a registered bull and a registered cow can be recorded. The official registry association for Shorthorn is the American Shorthorn Breeders' association, 13 Dexter Park avenue, Chicago, Ill.

The difference between white-faced cattle and Hereford cattle is that the Hereford is a distinct breed of cattle which have breed character. They have white faces, white along the under line and the lower side of the neck, red bodies and a stripe of white at the top of the neck and over the top of the shoulders. The white face is very predominant and where Herefords are crossed with other breeds and grades the offspring are usually whitefaced, although they are not Herefords. The official registry association for Herefords is the American Hereford Cattle Breeders' association, Kansas City, Mo.

Value of Cow Testing

The value of a year's cow testing for one animal is vividly portrayed by Fred J. Vetter of Machias, Snohomish county, Wash., who claims that it is worth three times what it cost for the entire year. The figures are taken from the books of the Snohomish County Cow Testing association, according to F. W. Kehrli, extension dairy specialist of the state college.

A short time before the association began the year's work Mr. Vetter tried to sell one of his cows for $100, since he thought she was below the standard of his high grade Guernseys. His neighbors, however, refused to buy because they had the same opinion as the cow's owner. When the test began she surprised every one because her test ran high and she produced 463 pounds of fat in the year, which brought a net return of $142. Although she was second cow in the herd in butterfat production, she was first when it came to returns above the cost of feed.

Since she made this test Mr. Vetter placed a valuation of $175 on her, yet she is not for sale. Her record in the association cost only $25, but it raised her valuation three times that amount, or a net return of 300 per cent on the investment.

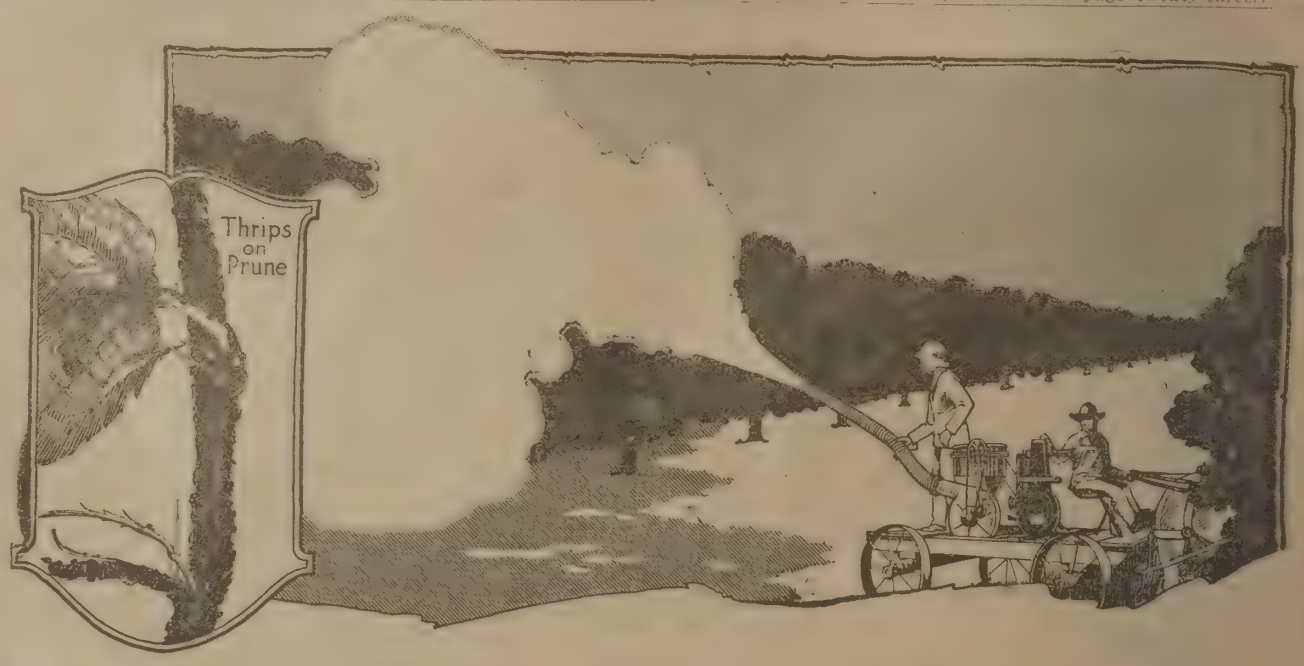
News for Breeders

TESTS BOOSTED PRICES.

Official testing at Butchart Brothers' farm, near Sunnyside, just before they disposed of their herd early in February, resulted in some excellent records and aided mightily in boosting the average prices obtained for their consignments.

Princess Pietertje Artis.

The work was done by Percy Butchart, who, though comparatively inexperienced, produced a new Yakima valley champion, a 30-pound junior 4-year-old, a 22-pound junior 2-year-old and another that made 18 pounds. Princess Pietertje Artis, the new champion, made 31.5 pounds and brought $815. Chimacum Wayne Pontiac Burke 2d made 30.14 pounds and topped the sale at $850. Newaukum Netherland is now one of five 20-pound junior 2-year-old daughters of Chimacum King Korndyke Sadie Vale, whose dam, S. V. H. Mollie, made 36 pounds in the state herd at Steilacoom.



ELIMINATES THE SCRUBS.

A few years ago Trumkey & Wolf of Wenatchee, Wash., traded a scrub cow to S. O. Pool & Sons of the same city for a high grade Jersey cow. They now have three females by purebred sires. These are so satisfactory that a short time since they went to Mr. Pool and said they must have a purebred Jersey bull calf. They were soon supplied with a grandson of Poppy's Golden St. Mawes, sire of the new world record senior 2-year-old Jersey, and are headed in the direction of a herd of purebred Jerseys. Mr. Pool reports the sale of several registered Jersey bulls to parties with grade herds. A bull he sold now heads the purebred herd of Lloyd Corle, a contractor of Wenatchee, who now has indulged his fancy for Jerseys to the extent that he has a herd of several purebred cows.

SHORTHORN MEN ORGANIZE.

The Washington Shorthorn Breeders' association was organized at Spokane February 22, following the consignment sale at that place and just preceding the Day & Rothrock sale at Sprague. Carl A. Greif of Uniontown was chosen president; J. E. Trimble, Farmington, vice president; A. E. Lawson, secretary; F. M. Rothrock, treasurer; and A. D. Dunn, Wapato, George Bertrand, Castlerock, and J. [illegible]

Get more profits from apples, prunes and pears

Dusting with Dosch Dusts is profit insurance

Professor H. H. Whetzel, plant pathologist of Cornell University, in an article on dusting, said: "I found every dust user I met not only satisfied but enthusiastic over dusting."

Dusting with Dosch Dusts has become recognized by growers and scientific men as being the easiest, most inexpensive and most effective method of protecting crops from fungous diseases and insect pests.

Dusting is Easier

—because Dosch Dusting Machinery is light and simple in construction. A light rig can go where a heavy rig would be mired. There is no intricate machinery. There is no water to haul.

Dusting is Most Inexpensive

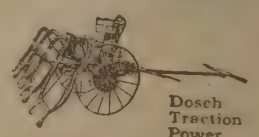
—because, aside from the actual saving in cost of equipment, more acreage can be covered in a shorter time—with *one-fifth* the usual labor.

Dusting is More Effective

—because the minute particles of Dosch Dust can penetrate out-of-the-way places on the crop and foliage—that would remain untouched by other means. This extra fineness of Dosch Dusts and the special "sticker" which they contain mean that Dosch Dusts will go everywhere—and stick.

Dosch Dusts will conquer Thrips on Prunes, Cherries and Pears, Scab and Codling Moth on Apples, as well as other Diseases and Insects.

The Dosch Research Department, composed of prominent plant-experts will send you Bulletins (results of actual experience) explaining the protection of any crop. Write this Department about your particular trouble and get personal advice without cost to you.



See the nearest dealer who sells Dosch Dusts and Dusting Machinery, or write us for his name and address.

For Good Farming, Attractive Country Homes and Happy Country People

Two New Outstanding Wheats

Hybrid 128 and Triplett Important Plant-Breeding Results of State Experiment Station Work

By S. B. NELSON

Dean and Director Extension Service, State College of Washington

Some 20 years ago Professor W. J. Spillman, then head of the department of agriculture of the State College of Washington and agriculturist to the experiment station, rediscovered the mendelian law in heredity. Being intensely interested in the improvement in cereals, Professor Spillman gave his attention to the cross-breeding of wheats.

This work has been continued until the present time at the experiment station of the State College of Washington. Much work along the same line has also been done at other experiment stations.

It takes approximately nine years to fix definitely any characteristic which might be developed in the crossing of two breeds, so out of these 20 or more years of breeding work two or three outstanding varieties of wheat have resulted from the work at the State College of Washington. One is known as Hybrid 128 and the other as Triplet.

Hybrid 128, at the present time one of the most important winter wheats grown in Washington, is the outcome of crossing Winter Fife on Little Club, while the Triplet wheat is the result of crossing Winter Fife on Little Club at the same time crossing Winter Fife on Turkey, then again crossing the result of these two crossings on each other, using the cross of Winter Fife and Little Club as the male parent. At the end of 10 years of experimentation it is ready for distribution. There, of course, is where the extension service becomes interested.

The results obtained in extending Hybrid 128 can not be entirely credited to the extension service because that work was started at about the same time that the extension service was started, as such. The plan that was used in changing from the growing of other wheat to either of these two has been, first, to send out to a small number of the best farmers a small quantity of the seed, maybe enough to sow one or five acres, under the arrangement that the crop was to be carefully measured and the results reported to the college.

After these field trials, covering two or three years, a strong campaign was put on through various agencies, such as the county agent, milling companies, the Washington Wheat Growers' association, etc., to further the general use of these varieties of wheat for seed.

One of the most important factors in doing this is the milling interests, because the milling interests have rapidly developed the differentiation of wheat in price according to gluten content.

As a result of the publicity given and the suggestions made, beginning about 10 years ago, the average crop of Hybrid 128 in 1918 and 1919 was practically 3,800,000 bushels, or 11 1-2 per cent of the wheat grown in the state of Washington, and this report covers only about five counties of the state.

In the case of Triplet wheat, 100 bushels of seed was distributed for the first time in 1918, enough to seed 80 acres. In 1921, three years after the first 80 acres were planted, there were put into crops and harvested in nine counties of the state approximately 40,000 acres, which yielded 1,250,000 bushels of wheat, an average of about 30 bushels per acre. This was again accomplished through general newspaper publicity, the personal demonstrations of the county agent and the soils and crops specialist of the extension service, the cereal specialist of the agricultural college, the grain companies and the milling interests.

Just lately Triplet wheat is getting a stimulus through the latter because the gluten value is greater than that of the other wheats, and there has been one instance where a sufficiently large lot was obtained, at a price 3 cents above the market. Once only has this occured, because it is not yet grown in sufficient quantities to supply flouring mills so that they can afford to change their rollers in order to put into practice the special process necessary to mill this wheat. This will, however, come within the next year or two, when much larger quantities will be available.

As a specific instance of the extension of growing Triplet wheat in one county it is found that in 1919 12 farmers grew 120 acres of the wheat, in 1920 56 farmers grew 611 acres of the wheat, in 1921 100 farmers grew 7000 acres and in the fall of 1921 130 farmers seeded 11,000 acres. So far in this county the average increase over other wheat is about nine bushels to the acre. This does not, however, hold good in certain other sections of the state. It is quite possible that Triplet wheat will replace a number of the better varieties of winter wheat grown in eastern Washington within the next two or three years.

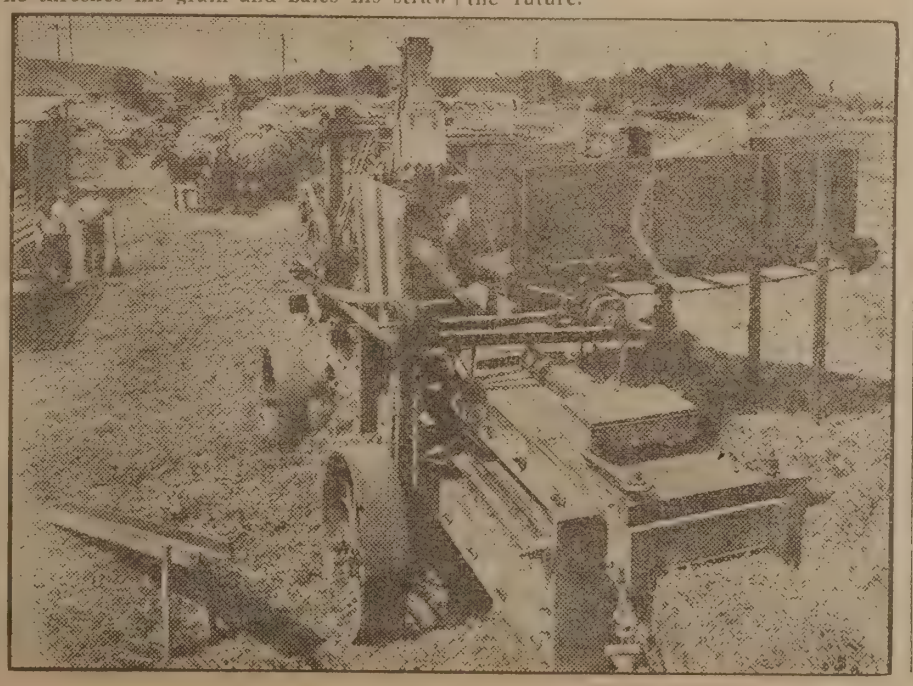
Another instance of a rapid turn in the growing of certain wheats occurred in Douglas county, where the county agent in the fall of 1918 contributed toward the importation of 8000 bushels of Kharkov wheat, this wheat being shipped in from Oregon. In 1921, three years later, 140,000 acres were seeded to this wheat. Although this wheat is apparently no better than the type of Turkey which was grown in that section, yet because of the care which had been used in growing the seed and keeping it clean and true to type; the farmers have taken up this wheat above all others. The indications are, however, that greater consideration will be given to the relative value of this wheat with others that have been grown in that section which may tend toward a lessened acreage of Kharkov in the future. This wheat was not spread as much on its real merits as it was on impulsive receptive judgment. One important factor which may determine increased or decreased planting is the not yet determined problem of fall and spring seeding in that section.

Another cereal, Rosen rye, has been extended very rapidly in its use in some of the dry sections of the state of Washington. Because of two or three years of drought in these dry sections, which drought did not allow sufficient moisture for growing of wheat, and because of the lessened acreage production of the then common rye used, which crop was from four to six bushels per acre, the soils and crops specialist and county agents in three counties decided to advise the introduction of certified Rosen rye from Michigan.

In the fall of 1919 there was imported into Franklin county one carload of Rosen rye for seed and 1800 acres were seeded that fall and certified the following year. The following year 730 bushels were introduced into Grant county from Franklin and two carloads shipped to Douglas county. I have no report on the number of acres seeded in Grant county, but 1000 acres were seeded in Douglas county in 1920 and 2500 in Franklin county. In the fall of 1921 15,000 acres were seeded in Douglas county. Because of the change of county agents in Franklin county recently it has not been possible to obtain the acreage seeded in that county this year.

This rye will yield in the neighborhood of 20 bushels on summer fallow and 10 bushels when stubbled in, while on stubble common rye only yields from four to six bushels. Whether or not this Rosen rye will hold its place or yield to Minnesota winter rye No. 12 is not yet known. The county agent in Adams county, Washington, has two fields of each, which may be used for comparison this year. However, there may occur in this demonstration a variation of error because of different types of farming.

Considering the development of the use of these cereals from all angles, the intrinsic value of the wheat as to gluten, the adaptability to climate and soil conditions, the resistance to disease and pests, possible increased yield, clearly defined by strong publicity through the several available agencies, are the reasons responsible for the results which have caused the rapid change from one type of cereal grown to that of another.



Reading from left to right, the varieties of wheat in the above illustration are: First two heads, Jones Fife; second two, Little Club; third two, Turkey Red; fourth two, Hybrid 128, and last two, Triplet.

Bales Straw at Threshing Time

Comparatively few farmers and live stock men realize the actual value of straw for feeding and bedding purposes. Many who do, however, realize also the great difficulty in caring for it conveniently and efficiently. Nels Anderson, a rancher of Bow, in Skagit county, knows the value of it in his section and has been busy for several years perfecting a device to make it convenient to save and feed the straw from his fields. The picture herewith shows the device by which he threshes his grain and bales his straw at one operation. The same power that drives his thresher drives the baler also, the latter being placed at the rear of the threshing machine. On October 7, last fall, this machine baled 68 tons of oat straw in nine hours and seven minutes, according to Mr. Anderson, who says that the cost was $1.05 per ton, including the wire.

Only one of these machines has been built so far, and the inventor has not announced what further plans he has for the future.

Seed Potato Growers

Seed potato growers of Stevens county will meet at Colville March 17 to organize a cooperative association to further the growing of seed potatoes and to assist in marketing.

"The record which the Stevens county seed potato has made in the irrigation belt justifies everything possible being done to stimulate its production," said County Agricultural Agent Glen Plumb. "Several cars of potatoes have been sold by the Stevens county farm bureau and offers have been received for a small supply on hand. It is estimated that next year Stevens county will market 150 cars of Netted Gem seed."

HERCULES BEEF CLUB.

Eleven Mabton, Wash., boys are members of the Hercules Beef club, with two steer calves each, furnished by Frank Rothrock, proprietor of Hercules stock farm. Mr. Rothrock made his offer of the calves on the boys' notes, the steers to be sold at the Western Royal next winter, at the Yakima farm bureau meeting, and George Varnum of Mabton, who is chairman of the county live stock committee, volunteered to take a carload of the steers for Mabton. He had no trouble in placing the 22 head, and could have placed more. The boys who are members of the club are Harold Holmes, Fred Schlein Jr., Chester Schlein, James Gordon, Floyd Hager, John Turner, David and Simon Bos and Gerald and Harvey Varnum, all of Mabton, and Ray Olson of Sunnyside. Mr. Varnum is leader of the club and says he has a set of "herdsmen" to be proud of.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Farm Bureau Contends for Absolute Long-and-Short-Haul Clause

According to a statement just published by the Association of Railway Executives, there was a falling off in railroad traffic during 1921 of 23.3 per cent under that of 1920. The association says that this is the greatest slump ever recorded in American transportation history. The statement says that in 1921 the number of tons of freight carried one mile in the United States was 344,167,000,000, or 104,390,000,000 less than the ton-miles of 1920. The decrease in the eastern district was 24 1-4 per cent; in the western, 22 1-2; and in the southern, 20.6.

We suppose these estimates are approximately correct, for they are compiled from reports to the interstate commerce commission. Yet in the face of that sharp slump in the volume of business done the transcontinental railroads were pretty prosperous in 1921. For example, the Northern Pacific Railroad company's preliminary statement for 1921 shows that after deduction of operating expenses, taxes and fixed charges the company had net earnings of $22,065,399. This is equivalent to $8.89 a share for the $248,000,000 of capital stock outstanding, and compares with $7.69 a share earned in 1920, when the railroad had the assistance of federal compensation and guaranteed payment.

In other words, the Northern Pacific earned nearly 9 per cent net on its total capital stock in 1921. The official figures are not yet available for the other roads of the Pacific northwest, but it will probably be found that the Great Northern and the Union Pacific did as well as or better than the Northern Pacific. The Milwaukee will not make so good a showing.

The point to be kept in mind is this, and it is a just and reasonable point: The transcontinental lines of this zone are prosperous even in time of industrial depression and distress. They show good net earnings in a year when the farmer had to endure the heaviest losses suffered by agriculture in a generation, and when the mortality in industrial and commercial institutions was extraordinarily high.

When industry and business come back to normal, as it bids fair to come in 1922, the transcontinental railroads, if they are allowed to go on charging existing excessive freight rates, will earn excessive dividends. As soon as business comes back approximately to normal, there should be an all-round reduction of freight rates, and that reduction should be applied to the interior communities as well as to the Coast cities.

The interstate commerce commission should not permit the railroads to enter into a rate war with the ships at the Pacific coast terminals. The purpose of the roads' application to the commission at this time is to enable them to drive the ships out of the harbors, and that should not be permitted. With the return of normal industry and business the country will need all of its transportation facilities, the ships as well as the railroads. The government should not allow the railroads to oppress the interior for the benefit of the industrial centers of the Coast. It should require fair freight rates all around.

With that thought in mind, both the national and Washington state farm bureau federations have gone emphatically on record in favor of an absolute long-and-short-haul clause to prohibit the railroads from charging more for a shorter haul to interior communities than they charge for the longer haul to the Coast cities.

Realism and Romance of Cooperation

If there should be within the range of our circulation any cooperative associations that are discouraged, any individual members who are faint-hearted, or any farmers who are skeptical of the benefits of cooperation, we commend to their careful reading the article in the last number of The Washington Farmer by J. A. Scollard, president of the United Dairy Association of Washington.

Mr. Scollard's article is at once a narrative of realism and romance. The state association is composed of six big county associations, with an aggregate membership of nearly 6000 dairy producers. The association has built up a great property that covers $1,500,000 in modern dairy plants. The total output of these plants in 1921 reached approximately $5,500,000, and Mr. Scollard anticipates an output with a money value of about $8,500,000 in 1922.

Notwithstanding that 1921 was one of the worst years for agriculture in the history of this country, the association operated every plant full time without a skip, including Sundays and holidays; met every pay roll for labor or milk with full payment on the regular designated pay day; not only met fully every interest obligation on the association bonds when due, but retired a considerable portion of the bond issue.

The fact that fewer than 1 per cent of the association's members withdrew from the organization in 1921 is pretty conclusive proof that the association is satisfying its membership.

The organization is purely cooperative up to the point of the marketing of its products, and there it is practically cooperative because it holds the whip hand over the marketing association with which it does business. It fixes the selling prices of all its commodities and pays an agreed commission to the marketing association. Moreover, it can terminate the selling contract on 60 days' notice and has the option of buying at cost, less depreciation, the distributing machinery of the marketing company. In other words, as Mr. Scollard explains it, the marketing company is the creature and the servant of the United Dairy Association of Washington.

President Scollard has told in a big way of the big work of a big organization.

One Big Accomplishment

"One big thing the farm bureau is doing in this county," said E. B. Stookey, county agriculturist of Thurston county, Wash., "is the bringing together, in a better understanding, of the farmers and local business men." A meeting at Olympia, on January 23, at which lunch was served, lasted till 4 p. m.

This meeting was productive of such good results that it was there decided to hold another meeting in another community at an early date.

At these community meetings both farmers and merchants speak. It has already been decided to standardize several farm products, as a means of assuring a better market.

Avoid It Next Year

There is not a farmer in this state who has not experienced some inconvenience about his regular farm tasks this winter. Now is the time to plan to avoid the like inconvenience next winter by making the required changes of equipment or arrangements.

State Farm News

A meeting of seed potato growers of Stevens county will be held at Colville March 17. A cooperative association will be organized to further the growing of seed potatoes and to assist in marketing.

"The record which the Stevens county seed potato has made in the irrigation belt justifies everything possible being doing to stimulate its production," said County Agricultural Agent Glen Plumb. "Several cars of potatoes have been sold by the Stevens county farm bureau and offers have been received for a small supply on hand. It is estimated that next year Stevens county will market 150 cars of Netted Gem seed."

* * *

J. B. Rennie of Naches recently sold to J. R. Reynolds, banker of Naches, for $25,000 the Rennie 40-acre tract, one mile west of Naches. The land, which is practically all in fruit trees, has been the home of Mr. Rennie for 18 years. He took better than $10,000 in fruit returns from this place last year.

* * *

The output of the Jones Brothers' vinegar plant in Yakima in 1921 exceeded that of the previous season. The present year the plant will have an output of 125 to 150 carlots of vinegar, according to Sam F. Jones of San Francisco, president of the company, who spent a few days in Yakima recently. Mr. Jones is well pleased with the support which Yakima has given the industry. The company recently shipped an entire trainload of vinegar from the Pacific coast east, while 20 years ago the company shipped a whole trainload of vinegar from its Kentucky plant to the Pacific coast, and that attracted a great deal of attention at that time.

* * *

The first of the "hot house" lambs in the Yakima valley arrived the second week in February at the lambing sheds of Ellis Ragan, who has 9000 ewes. The Yakima Sheep company has about 3500 ewes and in the lower valley it is reported that Frank Rothrock has 4000 ewes near Outlook.

* * *

S. K. Bowes, newly elected president of the Aberdeen Pioneers' association, at the close of a talk following the annual banquet of the association January 26, assured the banqueters that they might count on seeing the proposed pioneer association home listed among the building operations of 1922.

Mr. Bowes followed his statement by the appointment of a committee composed of Mrs. Jean B. Stewart, donor of the park where the home will stand; Mrs. A. D. Wood, Mrs. William Irvine, J. A. Taft and J. J. Carney, to supervise the plans for the building.

* * *

E. A. Tyrell, fruit grower of Selah Heights, used an ax in pruning his trees a short time ago, but he explains that they were pear fillers and he thought it were time for them to come out. Mr. Tyrell has an orchard in which the alfalfa has not been cut for several years and which has produced exceptionally well. He does not propose to let the fillers remain to interfere with apple production, hence they came out this winter. He took them out on eight acres and the removal of the fillers leaves his apple trees 26 feet apart.

* * *

Citizens of Pasco and vicinity will be asked to subscribe $50,000 to constitute a revolving fund designed to take up delinquent assessments of the Franklin county irrigation district, according to plans laid before the chamber of commerce by B. B. Horrigan, attorney for the district.

At a recent meeting Mr. Horrigan stated that these bonds are to be redeemed in one, two and three years, paying 8 per cent.

Dr. Fred Barber of the government biological survey and A. J. Rousch, architect, also addressed the meeting. Dr. Barber stated that 644 dairy cows had been tested in the county for tuberculosis, with only 12 reactors.

* * *

Machinery for making motor license plates will be installed in the state penitentiary at Walla Walla by April 1 and a carload of steel material for the plates will be on hand to start the work, according to I. L. Lockney, engineer in the department of business control, who returned to Olympia from an inspection trip in the middle west. The plant will cost about $15,000 and will turn out all 1923 license plates in connection with the new industrial plan for state institutions.

* * *

A meeting of dairymen of Ridgefield and the surrounding country was held for the purpose of considering the reopening of the cheese factory of the Ridgefield Milk Products company at Ridgefield, and if satisfactory arrangements can be made it is felt certain the plant will resume operations some time in March. It has been idle for several months. More than a year ago the factory was taken over and operated by the Oregon Dairymen's league, now a defunct organization, with which a number of farmers here were associated.

* * *

Lower records for the 1922 egg laying contest now being conducted at the western Washington experiment station are predicted in the monthly bulletin just issued on the contest. The bulletin points out that the steady nine weeks of freezing weather ended February 1 destroyed the kale supply and in general retarded the production of the contest birds.

The contest closed its third month January 31, with the birds in a satisfactory condition, according to the bulletin. None of the birds suffered frozen combs during the cold weather.

The monthly bulletin announces that a silver cup will be given by William M. Coates, well-known poultry judge, for the pen in the third annual contest which has the highest production record at the close of the 12 months of the contest.

Coming Events of Interest

Mar. 15.—Shorthorn sale by Post schools, Camp Lewis.
Mar. 15.—Kittitas live stock banquet, Ellensburg.
Mar. 18.—Boys', girls', garden club rally, Puyallup.
Mar. 22—Shorthorn consignment sale, Portland.
April 5—Pierce county poultry meet.
April 5-6.—Okanogan live stock meet-sale, Okanogan.
July 27-28—Whatcom co. Guernsey gallop, Bellingham.
April 16—Easter.
June 7-9—Union live stock show, Union, Ore.

FARM BUSINESS AND MARKETS OUTLOOK

AGRICULTURE PROSPEROUS IN 1922

The remarkable advance in prices of farm products in the last few weeks is capable of but one interpretation: The return of prosperity for agriculture.

In some instances prospective scarcity has provided a foundation for the advance in commodity prices, but most of the upturns have been much more rapid and profound than the shortages, actual or impending, would indicate.

The swinging of the economic pendulum toward revival of industry, business expansion and prosperity has been the most powerful factor.

It is only natural that agriculture should be first to feel the effect of what some folks like to call the "secondary inflation," as farm products were over-deflated, but other lines are going to prosper also. Freight loadings are on the increase, thus adding to railroad income; a building boom is in the incubation stages, and the number of men employed in automobile factories, cotton manufacturing, cotton finishing, hosiery and underwear, woolen and silk mills and leather, boot and shoe factories during January was considerably larger than in January, 1921.

These things point to more ready outlets for the products of the farm.

Foreign problems affecting the American farmer are troublesome, but the best barometer of financial progress in Europe is found in the exchange rate. Sterling has risen above $4.40, compared with a par of $4.86 and a low figure of $3.16 in 1920. Central European exchanges have not done so well, as their budgets are too far out of balance and paper money inflation has been many times more severe. But Europe seems to find funds for food and raw materials and she has been a willing buyer in this country.

Labor troubles are on the horizon in this country, with a soft coal miner's strike scheduled for April 1, but if prosperous conditions return a conflict over wages may be deferred. On the other hand, labor leaders should be too wise to press immoderate demands if industrial revival has not appeared.

FAT CATTLE PAYING OUT

In spite of the mean behavior of the market, most of the cattle sold during the last six weeks have made a little money for their owners. Nothing like the profits shown by lamb and hog feeders have been garnered, but moderate margins of $1 to $2 per hundred pounds have been obtained between cost and fat cattle prices.

Total supply at the leading markets has changed but little in the last two weeks, but the reduction from late January has permitted distinct improvement in the tone of the dressed beef market. The lenten season is at hand and may prevent further progress while it lasts. The result of taking out light feeders last fall is showing up in the present arrivals, most of which are below average in weight, thus reducing beef tonnage. Eastern markets have not been liberally supplied, so that shipping orders have been numerous at Chicago, Omaha and Kansas City and exporters are taking several hundred head every week.

The percentage of steers which show the effects of corn feeding is on the increase, but common and medium grades are still excessive in number and there are practically no long fed steers arriving. Competition from feeder buyers has caused gradual appreciation on the lower grades of steers in the last month, so that few suitable for carcass beef are available at under $7 at Chicago.

With an abundance of light steers, yearlings showing only medium finish are selling at a big discount. Choice yearlings, when available, are selling at the top of the market and feeders are hot after thin, light steers with quality.

Higher prices for lower grades of steers have helped the market for cows and heifers. Veal calves advanced last week. The spring deluge is just ahead, but high prices for lambs will help to support the market for well finished veals.

HIGH PRICES CHECK STOCK CATTLE BUYERS.

Shipments of stocker and feeder cattle from the 12 leading markets have averaged over 50,000 head a week for the last six weeks. High prices, compared with fat steer values, are checking the enthusiasm of buyers, while the advance of 50 cents to $1 in the last month has given owners of thin steers with quality courage to hold, so that the percentage of suitable stockers and feeders in the run has declined.

HOG MARKET STILL BOOMING.

Hog prices continue to ascend and crossed the $11 line at Chicago at the close of the week, with numerous predictions of $12 hogs before long. Receipts have not expanded and eastern buying competition is still lively in the middle west. The total decrease in hog slaughter in the west since November 1 amounts to 1,571,000 head, a reduction of 14 per cent. Domestic consumption of hog meats is as large as ever and exports of meats and lard in the first seven weeks of 1922 totaled 224,000,000 pounds, compared with 164,000,000 pounds in the same period of 1921.

Stocks of hog meat and lard in cold storage in the United States increased only half as much in January as in the same month a year ago and total stocks on February 1 were 542,604,000 pounds, compared with 752,380,000 pounds on the same date last year. Evidently small packers are not loaded with product, as they are still buying freely. Big packers are still bearish on the market and are buying only for fresh meat needs. They claim that hogs packed at prevailing prices show a loss, are indifferent to small reserves for the summer season and predict that the hog run will increase enough in the late spring to enable them to buy on a substantially lower basis. Present prices may not be fully held, but there is nothing to indicate a pronounced break before June.

Stock hogs are being snapped up greedily and there is every indication that production is being expanded as rapidly as possible. The market, however, will not feel the effect of this expansion for a number of months.

LAMB MARKET IN SETBACK.

The lamb market has had its first setback in a long while. Receipts show little change, but many feeders are cashing in early with partly finished lambs. This is subtracting from the supply to be marketed later on, so that the break should not be severe. Many shorn lambs are arriving, but the discount is too great to make the shearing operation look attractive. On February 1, 1921, there were 73,082,000 pounds, equal to about 2,000,000 carcasses, of frozen lamb in storage in the United States. Most of this meat was reexported, so that stocks on February 1 this year were only 3,930,000 pounds, a decrease of 2,514,000 pounds during January. British markets have advanced along with the upturn in this country, so that frozen lamb from the southern hemisphere is not coming into the United States.

HORSE RECEIPTS EXCEED DEMAND.

The spring demand for farm chunks has expanded to some extent, but not as much as the supply has increased since December. But for the fact that many farmers wish to buy on credit, the prospects for a large distribution are brighter than for two years. Prices declined $5@10 at Chicago last week, bulk of the desirable chunks selling at $100@165. Demand for big horses broadened at St. Louis.

WOOL MARKET QUIETS DOWN.

The wool market has quieted down considerably in the last few weeks. Quotations on some of the very inferior wools may be slightly lower, otherwise they remain practically unchanged in this country, although declines of 5 to 10 per cent have been noted in both British and Australian auctions. The woolen goods market is reported unsatisfactory, although the American Woolen company has withdrawn many of its lines of fall goods. Woolen mills are less active than they were six weeks ago. Speculative efforts to advance the price of wool have practically ceased.

The Boston market is quoted as follows:

Wisconsin, Missouri and average New England, 1-2 blood, 38@39c; 3-8 blood, 38@39c; 1-4 blood, 36@37c.

Scoured basis:

Texas—Fine, 12 months, $1.05@1.10; fine, 8 months, 90@95c.

Oregon—Eastern No. 1 staple, $1.10@1.12; fine and fine medium combing, $1@1.05; eastern clothing, 85@90c; valley No. 1, 90@95c.

Territory—Fine staple, choice, $1.10@1.15; 1-2 blood combing, $1; 3-8 blood combing, 75@80c; 1-4 blood combing, 65@70c.

WHEAT RESERVES LIGHT

Unofficial reports upon farm holdings of wheat indicate a total of around 125,000,000 bushels. About 30,000,000 bushels will be required for spring seeding and a carry-over of 20,000,000 bushels on farms would be unusually light. On this basis there would remain 75,000,000 bushels for sale from farms during the next four months. It is estimated also that total holdings of wheat at primary markets, mills and elevators and on farms are only 247,000,000 bushels, compared with 327,000,000 bushels at this time last year.

Receipts of wheat at primary markets have not declined as much as reported light farm reserves would indicate and the visible supply at terminals is considerably larger than at this time last year. These factors are likely to change, however, within the next few weeks.

SOUTHWESTERN DROUGHT BROKEN.

Generous rains have relieved the drought in the southwest and crop reports from that section are much more favorable. The effect of the severe drought extending back to seeding time last fall, however, can not be entirely overcome, no matter how favorable the weather during the rest of the crop year.

The change in the weather in the southwest, together with less urgent demand for wheat on the part of European buyers, has caused a moderate reaction in the market after reaching a new high level on the crop. Statistical analyses still point to import requirements for the rest of the year as large as the known surpluses, if not slightly larger. There is a possibility also that the estimated surplus for Canada may be reduced 28,000,000 bushels, which would create an extremely tight situation. It is estimated that around 50 per cent of the Argentine surplus has been sold for export already and that Great Britain alone must buy 50,000,000 bushels more to supply her needs for the rest of the crop year. Large quantities of wheat are clearing from the Argentine and Australia every week, so that the total quantity on passage is quite large, but stocks of wheat immediately available in Europe are low and European consumers have been buying from North America as well as from the southern hemisphere because wheat from the former would arrive more quickly.

CORN SCORES BIG ADVANCE.

Corn prices advanced fully 20 cents per bushel at the outside over the low point of last November, although there has been a reaction from the top. Prices to producers have advanced even more because of the decline in freight rates since that time. All of the future deliveries for corn at Chicago sold above 70 cents per bushel when the market was at its height, exceeding slightly the prices paid at the corresponding time in 1921.

EXPORTERS AFTER OATS.

The oats market has finally begun to receive a little benefit from export demand, as sales estimated at around 3,000,000 bushels have been made in the last few days. If it continues this grain should advance into higher ground. Domestic distribution also appears to be improving slightly. Primary receipts are expected to decline within the next month, which will necessitate drawing upon the enormous visible supply at terminal markets. Farm reserves of oats as of March 1 are estimated about 380,000,000 bushels, compared with the official estimate of 684,000,000 bushels on the same date in 1921.

SEEDS TO COST LESS.

Prices for vegetable seeds as quoted by mail order retailers and wholesale dealers for the coming spring will be lower in most cases than at any time since 1917, according to a recent report of the bureau of markets and crop estimates. As a rule, wholesale prices for 1922, when compared with 1921, show a greater reduction than do the prices given in retail catalogues. Upon beans, peas, sweet corn, beets, cabbage, carrots, celery, onions and squashes wholesale prices have declined from 15 to 30 per cent in the last year, while the retail prices of the same seeds, with the exception of cabbage, are only 5 to 15 per cent lower than a year ago. Tomato seed prices at wholesale are 10 per cent lower and average retail prices are about 8 per cent lower.

Average prices per pound of standard varieties of vegetable seeds as quoted by reputable dealers and representative mail order retail seedsmen are as follows:

Kind of Seed.	Wholesale Price.	Retail Price.
Beans, dwarf snap	$0.13	$0.37
Beans, garden pole	.15	.39
Beets, garden	.38	1.00
Beets, mangel	.27	.70
Cabbage	2.00	3.15
Carrot	.40	1.00
Celery, domestic	1.60	2.75
Celery, imported	3.00	9.05
Cucumber	.81	1.35
Lettuce	.76	1.55
Muskmelon	.76	1.50
Watermelon	.46	1.05
Onion seed	1.20	2.55
Parsley	.50	1.10
Parsnip	.35	1.00
Peas, garden	.14	.37
Radish	.50	1.10
Spinach	.20	.60
Squash, summer	.75	1.50
Squash, winter	.80	1.40
Sweet corn	.10	.32
Tomato	2.80	3.90
Turnip, English	.35	.95
Turnip, Swede	.27	.90

CASH GRAIN MARKETS.

The range of cash grain prices for the week ending March 1 was as follows:

Chicago—Wheat: No. 1 hard, $1.38@1.43 1-4; No. 2, $1.37 1-2@1.43 3-4. Corn—No. 2 mixed, 58 3-4@64 1-2c; No. 3, 57@63c; No. 4, 55 3-4@62c; No. 2 yellow, 59@65 1-2c; No. 3, 57 1-2@58c; No. 4, 55 3-4@62c; No. 2 white, 58 3-4@64 1-2c; No. 3, 57 1-2@63c; No. 4, 55 3-4@62c. Oats—No. 2 white, 39@45c; No. 3, 34 3-4@40 1-2c; No. 4, 32 3-4@39 1-2c. Rye—$1.00 1-2@1.04. Barley, 60@70c.

SEED MARKETS BRISK.

Spring buying of clover and grass seed will be at its height during March. The advance in prices of these seed has not reduced the farmer's willingness to buy, as other farm products are also higher. Inquiries for clover seed have increased, as buyers fear that the market is getting away from them.

Toledo, per bushel—Prime red clover, $5.75; prime alsike, $12.50; prime timothy, $3.15.

LIMITED DEMAND FOR FEEDSTUFFS.

High prices and favorable weather have curtailed demand for feedstuffs, but values on most classes are firm. Flour mill operations have increased and offerings of wheat feeds are more liberal. With the coming of spring middlings will be wanted on account of the pig crop, while as soon as pasture is available demand for bran usually declines. Middlings may sell at a substantial premium in a month or two.

CHICAGO—Bran, $28.50; standard middlings, $29; flour middlings, $31.50; cottonseed meal, 43 per cent, $47; 36 per cent, $42.50; gluten feed, $32.65; hominy feed, $23; linseed oil meal, $54; tankage, $60.

EGGS NEARLY ON SPRING BASIS

Egg prices lost ground last week. The market has discounted in advance most of the spring increase in production, so that declines from the present level should not be severe, although the season's low point probably has not yet been reached. Cold weather has delayed the increase in the lay, so that combined receipts of eggs at Chicago, New York, Philadelphia and Boston are about 30 per cent lighter than at this season last year, when weather conditions were unusually favorable.

HAY MARKETS SLUGGISH.

Demand for hay remains limited, but loadings are moderate, so that prices are practically steady in most markets. Cold weather is helping to sustain the market. The supply of low grades is extremely high.

CHICAGO—No. 1 timothy, $20@22; No. 2, $19@20; No. 1 clover mixed, $19@20; sample and threshed hay, $8@16; No. 1 clover, $16@18; alfalfa, $11@15; Nebraska and South Dakota prairie, $11@15. Straw: Rye, $13@14; oats, $11@12; wheat, $9@10.

BUTTER MARKET UNSETTLED.

Lighter receipts and reports from country districts of a lighter make failed to restore a firm tone to the market. Eastern markets and Chicago were quoted on about the same basis, so that the amount of intermarket trading was small. Demand is broad and foreign markets have turned firm, so that there is little danger of further imports in the near future.

Plan Federation of Grain Growers

Denver Meeting, Called by Northwestern Producers, Works Out Plan for National Consolidation

By RAY McCLUNG

(Special by Wire to THE FARMER.)

DENVER, Col., March 3.—A national organization for marketing of wheat is projected as a result of the conference held in Denver this week under call by the Northwest Wheat Growers, Associated. The conference included representatives of all of the state wheat marketing associations of the country that are organized on the 100 per cent pool basis. Among the states represented in the meetings in addition to Washington, Oregon, Idaho and Montana, which are combined in the Northwest Wheat Growers, Associated, were Kansas, Oklahoma, Nebraska and Colorado. There also were representatives of the United States Grain Growers, Inc., in attendance. With the states of North Dakota and Texas, which have voiced their intention of joining with the other organizations in the national federation, the new organization, if effected, will start operation with a membership producing between 75,000,000 and 85,000,000 bushels of wheat annually.

While the United States Grain Growers, the national organization with a contract based on an optional plan of pooling or direct selling, is not included in the proposed federation, arrangements for cooperation between the two large societies were one of the results of the conference.

Have Single Purpose.

"The United States Grain Growers, Inc., and the American Wheat Growers, Associated, the organization now in process of formation by combining the existing 100 per cent pooling wheat growers' associations, are each engaged in organizing American farmers for the cooperative and orderly marketing of grain for the benefit of growers only," recites a resolution signed by representatives of United States Growers and all of the other marketing associations attending the conference. "Mutual accusations and charges as to the methods and purposes of each group have been made by representatives and agents of the others to the detriment of each. Resolved, that we recognize the good faith and high purpose of all the various groups engaged in organizing the grain growers of America and that we pledge ourselves to conduct our respective campaigns for membership and the favor of the public in conformity with fair play."

Will Operate This Season.

The proposed national organization, which has been named the American Wheat Growers, Associated, is to be put on its feet as soon as organization work in any two of the middle western states is at such a place that they can competently care for the marketing of wheat.

This stipulation was made by the Northwest Wheat Growers, Associated, inasmuch as none of the central states have yet completed organization work. It is expected that Kansas, Oklahoma and Nebraska all will be in shape to operate prior to the next selling season.

Jewett Heads Committee.

George C. Jewett, general manager of the Northwest Wheat Growers, Associated, was named by the convention as chairman of the committee which will provide plans for the national federation. W. C. Lansdon, lecturer for the National Farmers' union and public representative on the Kansas Wheat Growers, Associated, board of directors, is the second member of the committee and D. G. Murley, president of the Oklahoma Wheat Growers' association, the third member. The committee will hold its first meeting in Kansas City March 9.

All of the middle western organizations were insistent on the employment of Mr. Jewett to head the American Wheat Growers, Associated, which, according to tentative plans, will include a department to care for the export sales of all of the organizations. It also will act to coordinate domestic sales, provide funds to the state organizations from which they may make advances to growers, exercise considerable control over publicity and organization work. The federation will include, when established, a legal bureau and department of statistics and accounting.

"We certainly are going to establish the national federation just as quickly as the states in the middle west are in condition to use it," said Mr. Jewett. "The results of the Denver conference promise an end to the enmities and friction between the organizations of the central states, and if they get down to real work there is no reason why they can not succeed just as have associations in Washington, Oregon, Idaho and Montana. I shall make a survey of the different state offices while in the middle west to determine about when they will be able to operate."

Several plans are being discussed for grouping states in zones. Under the plan most favored now Montana would be taken from the present Northwest Wheat Growers, Associated, and placed with North and South Dakota. Another zone is expected to include Kansas, Nebraska and Colorado and still another Texas, Oklahoma and New Mexico.

Throughout the conference the successful results of the marketing associations of the Pacific states were the subject of comment. Delegates from the far west were besieged with questions regarding their methods of operation and the middle west associations are planning to adopt the systems of accounting developed by the Northwest Wheat Growers, Associated.

U. S. Growers Form Sales Agency.

A Chicago dispatch states that the United States Grain Growers, Inc., March 5, announced incorporation of the United States Grain Growers' Sales company, a subsidiary organization, which plans to operate at once in the Chicago, Kansas City, Omaha, Indianapolis and Minneapolis markets. The subsidiary organization, according to officers of the United States Grain Growers, will be the largest grain selling firm in the world.

More than 110,000,000 bushels of grain will be marketed each year by the selling company on present membership basis, officials said.

"The United States Grain Growers' Sales company will be able to engage in a general grain business and perform all the functions of grain firms in the terminal markets at the present time," President C. H. Gustafson said.

Membership in the United States Grain Growers, Inc., has passed the 50,000 mark, officials said today, and announced that more than 85 per cent of the 50,705 grain growers are concentrated in the states of Illinois, Nebraska, Indiana, North Dakota, Iowa and Missouri.

Fruit Marketing Mixup

To What Extent Are the Crutchfield, Rule and Other Eastern Agencies Concerned?

The North American Fruit exchange of the Pacific coast has just filed articles of incorporation at Olympia, Wash.

In this new fruit marketing agency, Reginald H. Parsons is chairman of the board; W. F. Gwin, president; A. R. Rule, vice president; G. H. White, vice president and treasurer; A. A. Prince, secretary and sales manager; J. Curtis Robinson, general traffic manager, and Warrall Wilson, counsel.

With the exception of A. R. Rule, these men were formerly actively identified with the management of the Northwestern Fruit exchange, controlled by J. S. Crutchfield of Pittsburgh, Mr. Parsons having been chairman of the board and Mr. Gwin former president. A. R. Rule is the new man in the organization and he is identified with the North American Fruit exchange of New York city.

One report has it that Messrs. Parsons, Gwin, White et al. resigned from the Northwestern Fruit exchange because of the growing dominance of the J. S. Crutchfield interests in its management, and that by withdrawing from the older organization and forming a new marketing agency these men can furnish the growers of the northwest with a more direct and less expensive medium of marketing their fruit.

On the other hand, W. F. Gwin, former manager of the Northwestern Fruit exchange, says, according to a newspaper interview in Wenatchee:

"The complete severance of my connection with the Northwest Fruit exchange was a voluntary act. Eastern minority stockholders showed no disposition to interfere with the management and policy of the company, which had chosen to align itself with the growers' cooperative movement. There was no conflict of interest or policy anywhere among the stockholders of the exchange. When two of its largest eastern stockholders became associated together in a large eastern merger, embracing a chain of jobbing and commission houses, they acted in concert to bring pressure to bear on the management of the exchange to force an alliance with the eastern combination. After a fair trial of the new conditions we were compelled to make a squaretoed choice between the service of the one or the other. We chose the side of the growers rather than that of the stockholders of the corporation."

The Crutchfield interests came into the Pacific northwest some 10 or 12 years ago and organized the Northwestern Fruit exchange as a marketing agency for local cooperative associations of fruit growers, and as such have marketed a considerable

(Continued on page eight.)

Tractors Are Put to Many Farm Uses

The Longer You Own One Adapted to Your Farm the More Jobs You Find It Capable of Doing

The farmer's main object in buying a tractor is to be able to do the heavy field work more quickly and easily than it can be done with horses, so that he can farm a greater acreage or handle his present acreage in a more efficient manner. This is the conclusion reached after investigating 191 farms in the corn belt where tractors are used. The investigation was made by the United States department of agriculture.

The report goes on to show that it is noticeable that the men who have owned a machine for one year or less use it as a rule only for plowing and a little belt work. However, there are exceptions to this rule for some who have owned machines less than a year use them on every operation possible, even outdoing the older operators on the total number of different uses. As a rule, the longer a machine is owned and the more experienced the operator becomes the more operations he finds the tractor can be used for.

While there is objection on the part of some to using the tractor on prepared ground, especially after disking, it was seen that nearly 50 per cent of the owners used the tractor for harrowing.

It will be of interest to note that of the operators who use only tractors for disking and harrowing the majority use two-plow machines, the remaining few using three-plows.

In any section it will be found that plowing is the principal operation for which the tractor is used, and that, on the average, the days it is used in draw-bar work will outnumber those devoted to belt work.

The list of operations obtained brought to light some uses that were of a rather unusual nature. To both the experienced and the inexperienced operator a list of these operations, both common and uncommon, should be of interest as suggestive of the possibilities of the tractor.

The largest number of different operations carried on by any one individual was 11, while several others use their tractors for 10 distinct operations. For all farms the operations averaged about five, which seems low considering what individual farmers have done. Among the operations named in draw-bar work are the following:

Plowing.	Listing.
Disking and spading.	
Harrowing and planking.	
Rolling and culti-packing.	
Seeding grain.	Pulling hay fork.
Cultivating corn.	Grain harvesting.
Loading hay.	Manure spreader.
Road grading and dragging.	
Moving buildings.	Building dike.
Clearing land.	Stretching fence.

Among the operations carried on by the tractor in belt work are the following:

Threshing grain.	Baling hay.
Hulling clover.	Sawing wood.
Elevating grain.	Sawmill.
Shelling corn.	Cider mill.
Ensilage cutter.	Feed grinding.
Concrete mixer.	Pumping water.
Pumping for irrigation.	

While many of the above operations are exceptional they nevertheless show the large possibilities of the tractor as a source of power for farm work as well as its adaptability to a large variety of uses.

As is natural to suppose, plowing leads all operations from the standpoint of number of users, with 96 per cent. Over 50 per cent used their tractors as a source of power for sawing wood, in many cases saving the expense of the purchase of a stationery engine to do this work.

Twelve per cent of the operators use their machines for pulling the hay wagon and loader. Labor shortage was principally responsible for the size of this group, for the work was done with one man fewer than when horses were used. Each of the farmers seemed to be pleased with the results obtained and stated that it was his intention to continue the operation another year. All of these operators used the tractor with one wagon and loader. If two wagons and two loaders were arranged so that they could be pulled at the same time, as is frequently done, it would result in still greater saving of time and labor.

Taking into account different soil con-

One man with tractor and double-disk harrow (upper) doing the work of two men and two four-mule teams with two single-disk harrows (lower).

ditions in different seasons of the year, the use of the tractor as well as horses, is not only the most common practice, but in most cases the most practical.

Referring to the belief that enough horses will have to be kept on the farm to carry on the operations for which it is not practicable to use the tractor, an exception might be noted—where it would be cheaper to hire an extra horse or two for a short period to carry the work on rather than keep them at a big expense throughout the year for a short period when needed. It was found that 22 men did just this thing, finding it a great deal cheaper to hire than own. This practice was highly recommended by some, as it saved the team and the necessary cost connected therewith, including investment, harness, feed and care. Help being scarce, many said it was their only way of obtaining an extra man when needed. Most of the men with teams for hire will not hire out their teams alone. It was the general opinion that a man and team could be hired relatively cheaper than a man alone, and this opinion is borne out by the prices paid by the majority of the men who hired.

All the reports emphasized the fact that the great advantage of the tractor lies in its ability to save time at critical seasons when time is precious and the success or failure of an entire crop hangs on the speed with which it is handled.

Summing up the whole problem, the first questions that the prospective tractor owner will naturally ask are:

For what operations can I use the tractor?

In what operation will it displace horses in whole or in part?

How many horses will it displace on my farm?

The above investigation was carried on in Ohio, Indiana, Illinois, Iowa, Missouri, Kansas and Nebraska. In each of these states localities were visited in which a large number of tractors were in operation. Briefly summarized these are the principal points brought out by this investigation:

1. The number of horses disposed of on 141 farms averaging 346 acres on which tractors had been used for a year or over was 2 1-2 per farm.

2. The average number of tillable acres per horse increased from 26 1-2 to 38 1-2 after the purchase of the tractor.

3. Nine operators out of 191 displaced horses entirely on plowing, disking and harrowing.

4. Only 16 operators allowed their horses to stand idle while the tractor was in use.

5. The number of horses displaced by the tractors on these farms was governed by the number it was necessary to retain for corn cultivation and other work current at the same time, which the tractor could not do.

6. The horses remaining on these farms are doing about 75 per cent of the tractive work and the tractors the remainder.

7. The tractor was used for an average of 29 10-hour days per year on the home farm.

8. A three-plow tractor on these farms does the work of 8 1-2 horses, plowing, disking, harrowing and harvesting.

9. After purchasing the tractor the average size of the farm was increased by 22 acres, or 6 1-3 per cent.

10. The principal advantage of a tractor is its ability to do heavy work in a shorter time than it can be done with horses.

Quarantine Against
Peach, Nectarine, Apricot Trees

The peach yellows and peach rosette have both been found to be dangerous diseases in the southeastern part of the United States, and the state department of agriculture has issued a quarantine prohibiting the entrance of peach, nectarine or apricot trees, cuttings, grafts, scions or buds from entering the state of Washington. The quarantine applies to the following states: Massachusetts, Connecticut, Rhode Island, Pennsylvania, West Virginia, Virginia, North Carolina, Tennessee, Kentucky, Mississippi, Ohio, Michigan, Indiana, Illinois, Arkansas, Nevada, Florida and the Province of Ontario, in Canada.

The quarantine is necessary, states E. L. French, director of agriculture, upon issuing the order, because the diseases can not be determined by the most rigid inspection of the nursery stock in question. It is, therefore, considered best to quarantine all shipments coming from states infested with the disease.

SEEK PERMIT TO GRAZE BUFFALO.

Application for a permit to graze 66 head of bubffalo on the national forests near Yakima, Wash., brought out the fact that N. F. Crawford, in charge of grazing there, could find no regulations governing the grazing of buffalo and had to wire to Washington for information. The application was made by Gipson Brothers of the Yakima Meat company, who bought the Conrad herd and brought them to Yakima from Kalispell, Mont., recently. This is said to be the best small herd of buffalo in the United States and was received in fine condition.

Bee Time Again
Think Now About Spring Work

By GEORGE W. YORK.

Spring will soon be here again with all its profusion of flowers that invite the bees with their wonderful nectar-gathering and pollenizing abilities.

No doubt there will be the usual number of people who will want to embark in the business of beekeeping, so perhaps a few suggestions at this time will not be out of place.

If you are unable to secure full colonies of bees near where you live, say, about April 15 or May 1 here in the northwest, the next best thing to do is to send to any responsible dealer in bees. I say "responsible," for you don't want to take any chance on buying disease with your start of bees. And you want to get Italian bees, as they are the best kind. You didn't know that there are other kinds? Oh, yes; there are Carniolan bees from Carniola, Austria; Caucasian bees from the Caucasus mountain country, Cyprians from the Island of Cyprus, Holy Lands from Palestine. Punics from North Africa, etc. But you had better get some of the "old standbys," the Italians.

If you can not get a full colony of bees, either in an eight-frame or in a 10-frame modern hive, then I would get a three-frame nucleus. This latter would consist of three frames of comb with the adhering bees, queen, and any honey or brood already in the combs. Such nucleus is usually sent by express in a light shipping box. When received, each frame is lifted (with bees and all) into an empty hive previously prepared.

If the three-frame nucleus is put into an eight-frame hive, then you would need five extra frames filled with comb foundation; or, if put into a 10-frame hive, then you will need seven more frames with foundation to fill the hive.

I would not advise starting with more than one or two colonies at first. It is better to let your number of colonies increase with your knowledge of the business. You will be more likely to be permanently successful in that way.

Usually, of course, you would hardly expect to get much, if any, surplus honey the first season from a three-frame nucleus, although it has been done, all depending upon the season as to weather conditions, amount of blossoms and the nectar-secretion. One spring I got five three-frame nuclei, and by fall I had increased them to six full colonies, and took off 300 pounds of fine comb honey in the little square frames, thus making 60 pounds from each of the original five three-frame nuclei. Each of the six full colonies had stored enough honey to carry them through the following winter also.

Small Cow Has Large Calf

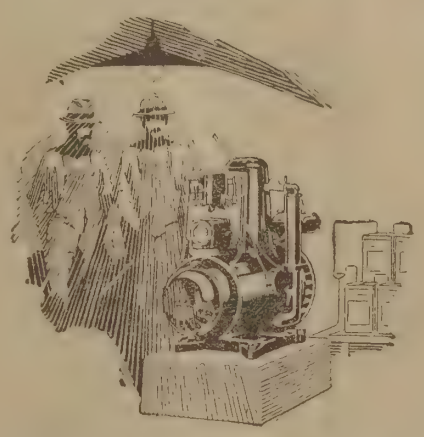
The picture herewith was sent in by Fred Thoni of Addy, in Stevens county. It shows a grade cow, weighing about 900 pounds, with a calf at her side that weighed 102 pounds at birth. The calf is sired by the registered Holstein bull of the Thoni herd.

What a difference Delco-Light has made"

WHAT a difference it would make in *your* home tonight if at supper you could flood the whole room with bright, clean, safe electric light!

You *can* do this if you have Delco-Light—the very day you install Delco-Light you can have all the things you need to make your home more modern, better, brighter and happier.

You will be able to have electric light at the touch of a button whenever and wherever you want it. No more lamps and lanterns. No more danger of fire. The same kerosene you now burn in lamps and lanterns will even give *cheaper* light when used as fuel for Delco-Light.



And electric power! Think of the convenience and labor saving! You will have power to pump all the water used in the house and barns—power for the milking, separating, churning, washing, ironing, sweeping and many other tasks that are now done by hand.

Your supply of electric light and power will be thoroughly reliable because it will come from the dependable Delco-Light plant. The air-cooled, valve-in-head, kerosene engine, and the thick-plate, long-lived batteries are giving continuous satisfaction to over 150,000 Delco-Light users.

If you haven't had a recent estimate on Delco-Light for your home, you will be surprised how little Delco-Light will cost at the new low prices and how easily it can be bought on our new time payment plan.

Just ask the nearest Delco-Light dealer to explain these things to you. Or mail us the coupon at the bottom of this page and we will send you our catalog, new prices and details of our easy-payment plan.

There are 25 styles and sizes of Delco-Light, $360 up

Seed Potatoes

Corrosive Sublimate Treatment

It is far better to use clean seed potatoes which have never been treated than to use seed that are slightly diseased and give them treatment, provided the soil is free from disease. This is the opinion of George L. Zundel, extension plant disease specialist of the Washington State college.

"There are few of our soils that are free from potato disease and it is for this reason that we find it more profitable to treat the seed before planting. Potato growers are losing money every year from diseases, the most common of them being rhizoctonia. Such losses can largely be eliminated by the use of cleaner seed and the proper treatment of tubers before they are planted.

"Corrosive sublimate is the best solution to use for treating seed potatoes. Formaldehyde is used in treating potato seed, but does not control rhizoctonia. Neither will bluestone, which is sometimes used.

To treat with corrosive sublimate use this solution before the potato tubers sprout. Wash the potato as free from dirt as possible, then cover with burlap or some other thick covering, so the potatoes will be kept wet from 24 to 48 hours. This is done in order to start the fungus, or "dirt that will not wash off," growing.

Next soak the potatoes in the solution from one to one and one-half hours, drying as soon as taken out. This solution is made by using four ounces of corrosive sublimate to 30 gallons of water. Use an open vat where possible.

Corrosive sublimate is very poisonous. Mix it in wood, cockery or glass containers. Keep it away from children and don't feed the treated potatoes to stock.

Fruit Marketing Mixup

(Continued from page six.)

portion of the fruit output of this section.

It is generally understood that the Crutchfield interests organized the North American Fruit exchange of New York city as a medium for marketing the fruit received by the Northwestern Fruit exchange and other similar organizations throughout the country, the North American Fruit exchange taking its toll and passing on the marketing to brokers in different parts of the country.

The Skookum Packers' association of Wenatchee, about a year ago, entered into contract with the Northwestern Fruit exchange to market the fruit of its members through this agency for a period of five years, the Northwestern Fruit exchange being possessor of the Skookum brand, which brand was nationally advertised.

Following the organization of the North American Fruit exchange of the Pacific coast the Skookum Packers' association, at a meeting in Wenatchee, adopted a resolution giving the local organizations in the Skookum association the right to contract their fruit to other selling agencies outside of the Northwestern Fruit exchange, reserving only one-car shipments through the Skookum association, thereby aiming to keep within the contract of the Northwestern Fruit exchange. This action is interpreted by some as scuttling the old organization, if that becomes necessary, in order to release the members from the marketing contract with the Northwestern Fruit exchange. At the same time, it is claimed that the Skookum association has not openly broken its contract with the Northwestern Fruit exchange.

Meanwhile, former members of the Skookum Packers' association have reorganized under the name of the United Apple Growers.

Certain pertinent questions arise out of this apple marketing mixup.

It is reasonable to believe that the Crutchfield interests are now withdrawing from the Pacific northwest, after having invested largely in fruit growing lands of this section and already marketing a large portion of the apples grown in the Pacific northwest?

Are the United Apple Growers assured of the complete severance of the Crutchfield interests in the North American Fruit exchange of the Pacific coast?

While Parsons, Gwin et al. have left the Northwestern Fruit exchange and organized the North American Fruit exchange of the Pacific coast, the reasons thus far given are not definite and satisfactory for the fruit growers.

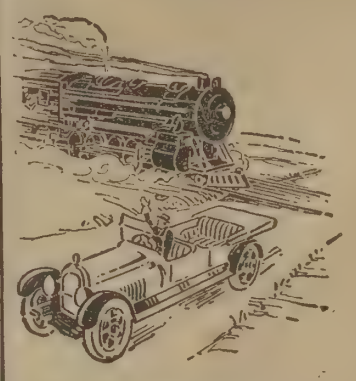
A truthful, simple and understandable statement of the fruit marketing situation would be greatly appreciated by northwest growers.

WHATCOM SHIPS AYRSHIRES.

Two carloads of Ayrshires were sent out of Whatcom county, Washington, late in last November for the vicinity of Santa Barbara, Cal. They were purchased by Henry and Beatrice Gants, proprietors of the H. G. ranch. William Lauckhart of Lynden and several other breeders of that place and Bellingham supplied the cattle. Mr. and Mrs. Gants had been using Ayrshire grades for some years. They liked them and decided to start in purebreds, with the result that they came to Whatcom county for them.

He beat the train to the crossing a good many times

"It's never touched me yet," he explained when they pointed out the risks.



That's the answer a good many people make when they hear that the drug element in tea and coffee often harms nerves and health. They say it's never touched them yet.

Sometimes they only *think* it hasn't.

Wakeful nights, drowsy days, headaches that keep coming more frequently—often are blamed on bad luck when the blame belongs on bad judgment in taking needless chances with harm.

Over on the safe side is Postum, a pure cereal beverage, delicious and satisfying—containing nothing that can harm nerves or digestion. Thousands who used to try their luck with tea or coffee are enthusiastic over having found safety and satisfaction in Postum.

It's worth your while to make the test with Postum for ten days. Postum is a delightful drink for any member of the family, at any meal.

Your grocer has both forms of Postum: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes.

Postum *for* Health

"There's a Reason"

Made by Postum Cereal Company, Inc., Battle Creek, Mich.

Would Inspect at Loading Points

Movement Is Launched to Prevent Heavy Losses in Fruit Shipments

Since the following discussion of the problem of inspection of fruit at loading stations was written word has been received from Washington, D. C., that Congressman Summers of this state, who had introduced the bill referred to in this article, has revised the bill in some important particulars. The details of these revisions have not yet been received by The Washington Farmer, but will be published and discussed as soon as possible after receipt.

Northwest fruit growers have sustained heavy losses owing to the alleged defective conditions in which their fruit arrives at eastern cities.

These losses have been especially heavy during the last few years by reason of large consignments of apples and pears being held up or condemned in several large cities on the charge that the fruit contained an excessive amount of poison spray residue.

In some cases the fruit was a complete loss, while in others the authorities were induced to release it after promises to have the growers reduce the use of the spray or to wipe the fruit before shipment. The growers contend that these heavy losses would be obviated by having the inspection made at loading stations in the northwest.

The demand for inspection at loading stations was made a prominent feature of the program of a recent meeting in Spokane of the fruit growers of Oregon, Washington, Idaho and Montana. A committee was appointed to put this matter before the United States department of agriculture as well as before the members of congress from the northwestern states in the matter of additional legislation to put the movement into effect. It is understood that the department of agriculture has agreed to consider the suggestion of the northwest fruit growers and Congressman John W. Summers of Washington state has introduced house bill No. 9952 with a view of affording the necessary legislation. This bill authorizes the secretary of agriculture to establish:

Uniform standards of classification.
An inspection service.
A market news service.
A system of adjustment of disputes.
A system of approved dealers and handlers for farm products.
And for other purposes.

Explaining his bill, Congressman Summers says that the demand that provision be made by which shippers of fruit and vegetables can obtain a United States certificate at shipping point is practically nationwide and that such a system would be of immense value to shippers is beyond question.

The trouble with the state work at shipping points is that no certificate issued by the state has any legal standing outside of the state's boundaries, whereas the controversies over grade and quality of the products shipped usually arise in distant markets and very often in small cities and towns where it is impossible under present authorities and appropriations to maintain inspectors.

This bill introduced by Mr. Summers is wholly permissive in its character, but it is inteneded to be educational and to accomplish the purpose of a regulatory act in bringing about certain reforms in this industry.

Section 3 would enact into permanent law the authority for grading and standardization work now carried on by the United States department of agriculture from year to year in the regular appropriation bill.

Section 4 would give the department of agriculture authority to license as United States inspectors competent persons not regularly in its employ for the purpose of grading in accordance with the standards established by the department. Through this section the department could exercise the authoritative and vital contact with state inspection services, which many of the states are now asking the department to maintain.

Section 5 would put into the permanent law the authority for the present inspection service with a widening of its scope, which would enable the department to make it almost, if not entirely, self-supporting.

Section 6 provides for the punishment of certain offenses, but in case of any complaint or action under this section the recourse would be directly to a court.

Section 7 would enact into permanent legislation the authority carried from year to year in the appropriation bill to maintain a market news service and provide specifically for obtaining information from common carriers, which they are now giving voluntarily, and might at any time refrain from giving. While this news service is of great value to the country as a whole, those who derive an immediate personal financial benefit from it should make some direct contribution to its maintenance. Therefore, it is believed that any permanent legislation providing for this service should have incorporated such a revenue-producing feature as is indicated in the bill.

Under section 8 there could be set up what would amount to a voluntary licensing system for shippers, representatives and agents of every kind. It is believed that the army of the best shipping agencies and growers' organizations would be quick to enroll and that public sentiment would quickly force almost every important fruit and vegetable handler to operate in accordance with these suggestions.

Section 9 proposes to do the same thing for wholesale buyers and shippers who may actually own or contract for the products they handle and do not operate as growers, agents or representatives.

Section 10 aims to revive upon a purely voluntary basis the system of arbitration in vogue during the war under the food administration.

Section 11 provides that those who enroll with the bureau of markets as agreeing to abide by approved rules for the conduct of their business and who subsequently violate the confidence may be punished by publication.

A part of the work to be done under this act is provided for under current appropriations, but it would be necessary to have additional funds to cover the salaries of the force employed in connection with the voluntary licensing of handlers and dealers, the occasional inspection of their books and records, etc.

It is believed that the passage of an act embodying the ideas and principles set forth in this bill would enable the department of agriculture to render a service of the highest importance. The department could cooperate effectively with the best elements in the trade in the accomplishment of the purposes for which their own organizations have been ostensibly formed.

Finally, Congressman Summers believes that this measure will help to stabilize the market and, while preventing controversies between producers and shippers in the west and buyers of fruits and vegetables in the east, it will be the best possible guarantee that the consuming public is getting what it pays for.

Inspection of fruits at loading stations by inspectors working under the authority of the United States department of agriculture will mean dollars and cents to the producer.

Congressman Summers' bill, the main points of which are given above, aims to do just this. The provisions of the bill, however, should be thoroughly considered by the growers of fruits, especially by the cooperative organizations handling fruits for the producer.

THE FARMER is arranging for several articles on this subject of inspection of fruits and other perishable products on the farm at the point of loading to be prepared by producers and by those who are closely connected with the organizations of producers.

To Sell Sows in "Units"

The arrest recently at Sacramento, Cal., of Charles Calloway, president and manager of the C. & H. Hog syndicate, opens another chapter in the story of an enterprise through which it is said gullible investors were defrauded out of $120,000. The syndicate was organized at Yakima to sell brood sows in "units," the profits to accrue from the increase. A year or so ago suit was brought for payment on some of the hogs and the court appointed a receiver, who immediately closed up the syndicate's affairs. Warrants were issued for three officers, but Calloway is the only one who has been apprehended.

A. L. MARSHALL, Bethel, Wash.—"We couldn't get along without The Washington Farmer. We look for it as we do for the newspaper. The farm crops reports are exceedingly valuable, and we wish we could have more of them."

FISK TIRES

RED-TOPS proved their merit—sales grew five-fold

IN a mountainous region in a Southern state, where there is not a single good road in four counties—

—Fisk Red-Tops have increased in sales five-fold in three years.

—Because they gave remarkable service, where other tires were ground up and torn to pieces on the flinty shale and racked highways.

This is only one of the many instances where Red-Tops won out against all competition on merit alone.

Comparison tells the story

LIVESTOCK AND DAIRY

Dairy Questions Answered

How to Make Cheese at Home--Bitterness in Cream --Feeding Sugar Beets to Milch Cows.

By A. B. NYSTROM.

I would like to know how to make cheese at home. Can a lard press be used? How do you keep it from spoiling? How long can you keep cheese before it gets too old or can you keep it from getting old? Can it be made in a wash-boiler? Do you cut it with a butcher knife if you don't have cheese knives? What do you color it with?

Waitsburg, Wash. MRS. F. M'K.

Farmers' Bulletin No. 1191 of the United States department of agriculture gives specific directions for making cheese at home. A lard press can be used in cheesemaking, but it is sometimes difficult to get a continuous pressure with such a press. An ordinary lever press is as good as any. Cheese does not spoil readily when it is properly made and paraffined. A wash-boiler may be used for a vat. It should be placed in hot water and the heat applied to the water rather than directly to the milk. A butcher knife may be used for the vertical cutting and a piece of fine wire properly bent may be used for the horizontal cutting. Cheese is colored with a special cheese color that can be obtained at dairy supply stores and at some drug stores.

The following summary is taken from the bulletin referred to:

1. Use clean, sweet milk for cheesemaking.
2. Heat milk to 86 degrees F. Use a thermometer to determine the temperature.
3. Add cheese color if desired, using one-half teaspoon to 100 pounds of milk. Do not use butter color.
4. Add rennet, first diluting it with a pint of cold water. Use one-third ounce (two teaspoons) to 100 pounds of milk. Stir rennet in thoroughly, then leave milk and container undisturbed for 30 minutes.
5. Cut the curd when sufficiently firm. Do not crush or break it.
6. Stir the curd gently for 15 or 20 minutes.
7. Heat at the rate of 2 degrees in five minutes, until the temperature reaches 100 degrees F. Stir while heating.
8. Allow curd to remain in whey at 100 degrees F. until firm and until acid enough has developed. Do not let curd mat together.
9. Sufficient acid has developed when the curd will form strings one-fourth to one-half inch long on a hot iron.
10. The curd is firm enough if a handful of it pressed together between the hands falls apart readily when the pressure is released.
11. When the curd is firm and sufficient acid has developed draw off the whey and put the curd on a draining rack. Do not let the curd form into pieces larger than a hickory nut. Keep the curd warm while on the rack.
12. When the curd forms strings from three-fourths to one inch long on a hot iron add salt at the rate of three ounces for 10 pounds of curd.
13. Have the curd at a temperature of about 85 degrees F.; put it into a hoop and apply pressure gently.
14. Dress cheese, return it to the press and apply full pressure for 24 hours.
15. Place the cheese in a curing room at at temperature of between 50 degrees and 60 degrees.
16. While curing turn the cheese daily for two weeks, then twice a week. Paraffin cheese when two weeks old by dipping it in paraffin heated to a temperature of 240 degrees F.

* * *

Am using milk from a cow that has one teat that gives bloody milk. Also cream is so bitter that no butter can be made from it. Cow isn't bred and has been milking most of a year. Is this milk fit to drink? INQUISITIVE.

Cows that do not freshen within a year from previous calving very often give abnormal milk with a salty taste. It is also hard to churn. Bitterness, however, does not usually appear unless there is some contamination. This may come from a diseased gland, which may also produce bloody milk. If the udder is sensitive to manipulation there are probably internal sores and the milk should not be used until the animal is examined by a veterinarian.

Bitterness may also be caused by organisms that get into the milk after it leaves the cow. Thorough sterilization of all utensils will control this. The difficult churning is caused by the advanced stage of lactation, causing small fat globules, and also dry feed, which makes the fat hard. Giving succulent feed, such as silage or roots, will tend to correct this. After the cow freshens there will be no further difficulty.

* * *

I would like to know if sugar beets will take the place of grain for milch cows. If so, how many pounds to the cow per day? J. D. D.

Everett, Wash.

Root crops as a rule are considered watery concentrates. That is, the dry matter in them is highly digestible and there is very little fiber present. Under some conditions it is safe to replace about half of the grain ration by the use of sugar beets. However, since sugar beets are high in carbohydrates and since grain rations are often just the reverse, high in protein, it may not be wise to make this substitution. You can feed from 30 to 50 pounds of sugar beets as a daily ration to the average cow. More to the large cows that produce heavily. Cut the grain to half on the lowest producers as you increase on the beets. Your best producers should continue to get the full grain ration in addition to the beets. It pays to feed good cows well.

Must Standardize

Inefficient Dairying Unprofitable

There are too many haphazard methods being practiced in the dairy industry, in the belief of E. G. Woodward, until recently head of the dairy department of the State College of Washington. Professor Woodward urges a standardization in dairy farming, and emphasizes as the first essential in this movement the elimination of the low-producing cow. He doubts whether any cow producing less than 250 pounds of butterfat in a year should be kept in a dairy herd. Notwithstanding the fact that many herds throughout the Pacific northwest have production averages far above this amount, he declares it to be his belief that comparatively few herds except specialized herds, are made up of cows all of which produce 250 pounds or more. On the common farm the producer of a less amount is common, if not actually in the majority.

Another point recommended is that the

Homeward Bound— Eager to be Milked

Cows with healthy udders and teats "give down" the milk easily, freely. The slightest injury or discomfort means a sure milk-loss.

Bag-Balm pays for its slight cost many times over in providing a sure, quick relief from udder troubles. Sores, chaps, cuts, scratches, inflamed tissues, hardened or swollen teats, caked Bag—an abnormal udder condition is quickly cleared up by this great penetrating, healing ointment.

Big 10-ounce package at the reduced price of 60c, at general stores, feed dealers, druggists.

Spring Is Here

Now come the Pigs—the Calves—the Colts—and the Lambs.

TIME for your work horses and mules to shed their winter's coat.

—TIME to tone them up—give their systems a spring house-cleaning—and drive out the worms.

Dr. Hess Stock Tonic

A Spring Conditioner and Worm Expeller

Your COWS that have long been on winter feed need the system-toning, bowel-cleansing, appetizing effects of Dr. Hess Stock Tonic. Puts them in fine condition for calving. It means more milk.

Your BROOD SOWS will be relieved of constipation and put in fine fettle for farrowing by a course of Dr. Hess Stock Tonic,—which means healthy pigs, and a mother with an ample milk supply to nourish them.

Your SHOATS will be greatly benefited by a course of Dr. Hess Stock Tonic. It drives out the worms—stimulates the appetite and makes them thrive.

Feed it to EWES before lambing time. It prevents fevered udders and scouring lambs. Feed it after lambing time to stimulate the flow of milk, insuring lambs for the early market.

Dr. Hess Stock Tonic contains Tonics for the digestion, Laxatives for the bowels, Diuretics for the kidneys, and Vermifuges for the worms.

Always buy it according to the size of your herd. Tell your dealer how many animals you have. He has a package to suit. Good results guaranteed.

Why Pay the Peddler Twice My Price?

owner of cows, whether a specialized dairyman or a general farmer with a small herd, make it a practice to produce the greater part of his feed at home, with the exception of the concentrates. Grains and meals in the greater number of cases must be purchased, but the roughages should in all but exceptional cases be produced at home.

The feeding of the dairy cow is a science. In too many cases all the cows of the herd are given the same quantity of feed, when the amounts given should be definitely calculated for each individual on the basis of her ability to convert it into milk and butterfat. She should be given the maximum of feed that she will convert into these products, but no more. The low producer is often a heavy feeder if given an opportunity, though unable to convert more than a small proportion of the feed that she consumes into milk.

The profitable cow is the one that consumes much feed, possessing the ability to convert it into milk and butterfat instead of allowing it to pass on unutilized or be converted into bodily fat. Each individual should be studied and fed accordingly.

VETERINARY

By DR. S. B. NELSON.

Retention of Afterbirth.—I have had lots of trouble when my cows freshen. They do not clean. Does this always have to be taken off or is there something you could give the cow, after or before freshening, to avoid this trouble? H. S.
Plaza, Wash.

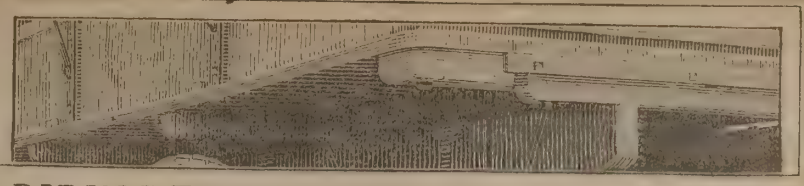
The retention of the afterbirth is generally caused either by excessive weakness in the cow or too great strength. In the first place there is not sufficient tone in the muscles of the womb to cause it to contract and release the attachments of the placenta. If the animal is too strong, we find that there is too much blood sent into the placenta which prevents the blood vessels from twisting and cutting off the supply. Depending upon which of the two causes is responsible for the trouble treatment will be as follows:

In the first case, begin building up the cows prior to the time that you expect them to freshen. This may be a grain feed for a week or two before this is to occur. If, however, they are in splendid good strength, then it is a case of weakening them, for instance, with a purge of one-half pound of epsom salts in two quarts of water, or it may be giving a sloppy food for two or three days before they freshen.

Use Teat Knife.—I have a heifer which freshened January 12. One teat has always been wrong. When I first start to milk her the teat will be full of milk. After milking it out it seems to fill with wind, then you have to wait for the milk to come slowly down from the udder into the teat. She gives as much from that quarter of the udder as any of the others, but it takes fully 15 minutes to get it out.
Seattle, Wash. MRS. R. A. D.

Apparently the trouble with your heifer is that the opening of the valve in the base of the teat is nearly obliterated. This may be remedied by the use of what is known as the teat knife, a small instrument which has a hidden blade. The instrument is inserted, after a thorough disinfecting of it, into the tip of the teat, with the knife hidden. It is pushed up through the valve and the blade is opened and the knife is drawn down, making a slit in the valve. The kife is again hidden, pushed up, turned one-fourth the way around and drawn again. This is repeated until four cuts are made.

Lumpy Jaw—I have a yearling that is in good health and eats heartily. About three weeks ago it got a lump on its jaw and the lump broke and ran some. Is this lumpy jaw and is it contagious? Is such an animal fit for beef? S. M. J.
Deer Park, Wash.



Whenever a lump appears on the jaw and breaks and heals it would make a person rather suspicious that it is lumpy jaw. If you have a number of good cattle it is dangerous to keep this animal on your place. I have always considered, personally, that meat from a lumpy jaw animal is not fit for human consumption.

Try Liniment.—I have a cow that gives lumpy milk. One quarter of the udder seems inclined to cake. She will freshen in April. A. C. R.
Kirkland, Wash.

I would suggest the use of the following liniment, applied to the affected part: Soap liniment, five ounces; tincture of iodine, three ounces; use night and morning after each milking. It might also be of value to give the cow one tablespoonful of fluid extract of phytolacca in a little water, once daily.

Bowel Trouble.—My dog has had bowel trouble for three months and the purging has made the rectum sore and swollen and blood passes from the bowels. What can I do for him? L. S.
Redmond, Wash.

Give your dog five grains of the triple sulpho-carbolates of calcium, zinc and soda and apply carbonated petrolatum to the opening of the bowel.

RIDING THE MUDDY ROAD TO MARKET

Copyright 1922, by The Goodyear Tire & Rubber Co., Inc.

"Of all my farm machinery, no one thing is more profitable to me than my truck on Goodyear Cord Tires. It does the work of three teams and speeds up every farm task, especially the hauling of cattle to market. Our local Goodyear Dealer, Rossville Motors Company, renders helpful service on them regularly."—HAROLD MANN, Speedwell Farm, Rossville, Illinois

SPRING turns the country roads to mud, and then the farmer's Goodyear Cord Truck Tires reveal their all-year-'round utility.

On the hub-deep roads and in the soft going of fields and lanes, their All-Weather Tread wins swift and powerful traction. The active pneumatics make more trips per day, cover more ground, and deliver perishable product to market in better condition.

As the roads dry and the ruts harden, the greater strength of Goodyear Cords is demonstrated in their sure dependability and their remarkable mileage at low cost.

Their lasting resilience is a cushion to the load and the driver, and a protection to the valuable truck and the improved road.

Write to Goodyear, Akron, Ohio, or Los Angeles, California, for actual reports of farm hauling on Goodyear Cord Truck Tires.

GOODYEAR

Yield and quality decide profit

Yield decides how many bushels or pounds you have to sell.

Whether the yield be large or small, it costs you about the same to grow an acre of a certain crop. The more that acre produces, the larger your profit.

Quality decides the market price of your crop—the better the quality, the better the price.

A few extra cents per bushel or pound amounts to several dollars on the entire crop.

Swift's Red Steer Fertilizers are made to produce bigger yields of better quality crops.

Buy from our local dealer or write us direct.

POULTRY

Fowl Cholera

By J. W. Kalkus, Washington State College Veterinary Department

Discussing fowl cholera in the United States, a bulletin of the Nevada Experiment station says that the occurrence and distribution of the disease in the United States is a subject upon which opinions have differed widely for many years. The disease has been reported from many localities by poultrymen who are usually of the opinion that it is widely distributed and frequently encountered. On the other hand, the fact that in but a few instances have reported outbreaks been diagnosed by precise method has led many pathologists to doubt its frequent occurrence in this country. A careful investigation of fowl cholera will probably show that it has had a fairly wide distribution throughout the United States during the last 50 years, but that it occurred less frequently than poultry raisers believed. It is widely distributed throughout continental Europe, where the loss is heavy.—Editor.

Fowl cholera has recently made its appearence in Spokane county. A number of chickens from one flock were sent to the college of veterinary science at the State College of Washington and from these a pure culture of the organism which causes this infection has been isolated. This is a very highly contagious disease, which may attack chickens, turkeys, ducks, geese, pigeons and caged birds.

Whenever it makes its appearance it spreads rapidly through a flock and produces a high mortality, the losses frequently running as high as 90 per cent to 100 per cent before the outbreak can be checked. Since the disease is so highly contagious, it is quite likely that it may spread to other flocks and poultrymen generally should know something about the nature of the disease in order that they may guard against its being introduced into their flocks.

As a rule when the disease first attacks a flock it is so virulent in form that a number of birds may die suddenly without noticeable symptoms. In those birds which show symptoms the first thing noticed is a yellowish discoloration of the droppings. This may be followed by diarrhea, the droppings consisting of whitish or yellowish secretations mixed with considerable qualities of thin nucus, or there may be a brownish or greenish color and the droppings may become very fluid in consistency. There is considerable fever and sick birds separate from the rest of the flock, appear dull, dejected and droopy. The wings may droop, the feathers become ruffled and the comb and wattles may assume a dark bluish-red color. In some cases the bluish-red color may also appear on the skin of the abdomen. As a rule the appetite remains fairly good until the bird dies. But occasionally there may be a complete loss of appetite. Death, as a rule, occurs anywhere from a few hours to three or four days, but after the disease has been present in the flock for some time it may assume a more or less chronic form: in such case the birds may live for a week or two. All of the body discharges as well as the blood and tissues of the affected birds are literally filled with the germs which cause the disease. Hence the feed, the litter and water are being constantly contaminated by sick birds and in this way the disease is transmitted to healthy ones. Such infections may be carried from one poultry establishment to another on the clothing, feet and hands of attendants or by dogs, cats and flying birds. Treatment of individual birds is without avail and, therefore, our attention must be directed chiefly toward the prevention of the disease.

Biological products, such as vaccines, have not proven of sufficient value to be generally recommended as a means of prevention. Many such are on the market at the present time and can be used without fear of doing harm, but their value is questionable. Thorough cleanliness, disinfection and preventing the introduction of the infection on premises are the means to be relied upon to prevent the disease. After it has once made its appearance in a flock all sick birds should immediately be removed, killed and burned. The houses should be thoroughly cleaned daily, removing all litter and burning this also. Daily disinfection should also be done by the use of a 5 per cent solution of carbolic acid, compound cresol solution, or some reliable coal tar disinfectant. Feeding and drinking should be so arranged that birds are unable to get into them with their feet. It is also well to add some antiseptic to the drinking water, such as one dram of permanganate of potash to each gallon of water.

Of course a positive diagnosis can not always be made by clinical examination. In the event that the disease is suspected, live sick birds or those that have recently died can be sent for examination to the college of veterinary science, State College of Washington.

The Baby Chick

Requires Care the First Few Days

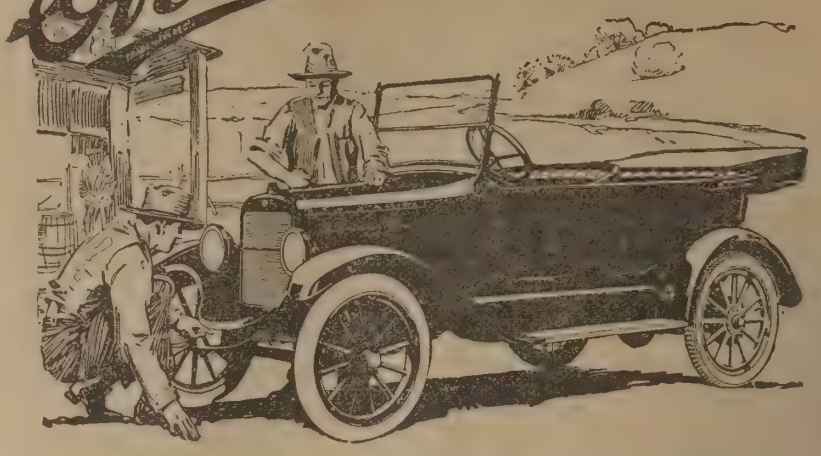
The first few days in the life of a baby chick are more important from the standpoint of his general well-being than are any other days during his early life. Mistakes in feeding or care at this time very often make the difference between a vigorous, profitable fowl in later days and a weak, useless one.

For the first 48 hours of the chick's life the two most fundamental points to be considered are heat and air. If the hatching has been done in the incubator, the door should be left slightly ajar the first day after the hatching is completed, so that the chicks will begin to harden for the colder temperature to which they will soon be subjected. This first day after hatching the temperature should be kept close about 98 degrees. The brooder, if chicks are not cared for by a mother hen, should make it possible for the chicks to have a temperature of about 95 degrees the first day they are in it. This does not mean that the entire space allotted to the little fellows should be kept at 95 degrees, but that there should always be a retreat where this temperature may be had when the chicks seek it. No opportunity should be given for the chicks to become chilled. In a day or two they will be sufficiently accustomed to their new form of life to get along well with a brooder temperature of about 80 degrees. Before long they will be able to run about where the temperature is much lower, though great care should always be exercised to insure against chilling.

Where the chicks are hatched and cared for by the hen, both they and the mother bird should be confined to quarters to insure against the little ones becoming too cold. There are few things more fatal to the vigor of a chick than chilling temperatures during these earlier days. In fact, a chick should never be permitted to get cold, even though several weeks old.

Fresh Air Needed.

Notwithstanding the fact that air is the most plentiful and the cheapest possession we have, it is a common failing even of professional poultrymen to allow the chicks too little of it. There is probably no other animal that requires as much fresh air, pound for pound or ounce for ounce, as does the baby chicks. Heat must not be sacrificed, but one must not think that he is providing everything the chick needs by merely furnishing plenty of warmth. Air does not have to be cold to be fresh, and sufficient heat must be supplied one way or another to keep the fresh air warm. As soon as possible after hatching, the chicks should be given an open space in which to exercise, but this should be limited and so arranged as to insure their speedy return to the warmth of their enclosure.



The little chicks should not be fed, at the earliest, prior to 24 hours of age, and preferably not for 48 hours.

Stop Hatching Weak Chicks

with cheap incubators. Remember, it is not how many you hatch that counts but how many you raise.
Chicks that hatch a few days mean out weak and wobbly, and live but nothing to you but trouble and loss.
Queen Incubators
produce large hatches of strong, vigorous chicks that live and grow. The Queen is accurately regulated—taking care automatically without attention of a variation in temperature of 70 degrees without danger to the eggs. It is built of genuine Redwood—very scarce in these days of imitation. Redwood does not absorb the odor from hatching chicks. Cheaper woods and strawboard or composition lining in iron or tin machines, retain the odors, to weaken and kill the chicks of later hatches.
Queen Incubators and Brooders are sold by dealers everywhere. Send for Free Book. (42)

Buckeye Brooders Are Profit Insurance

IT isn't the eggs you hatch, it's the chicks you raise that bring profits. The Buckeye "Colony" Brooders are insurance toward success because they raise every raisable chick at a fourth the labor and half the expense. They prevent crowding, overheating and chilling, which cause that awful mortality that takes the heart out of the raiser. With them chicken raising becomes profitable and is no longer a gamble.
WRITE YOUR GUARANTEE
Buckeye "Colony" Brooders are made in three sizes and burn coal, gas or oil.
For years we have urged the purchaser to write his own guarantee on these brooders and we will sign it and refund the money if at the end of thirty days the purchaser is not satisfied.
Our new booklet, "The Revolution in Chick Raising" gives the reasons for this wonderful assurance of success, tells how poultry raising may be made profitable—and proves our statements. Get it for your guidance. Sent free on request

The Orchard

Strawberries

Two Systems of Planting Shown

One of the most interesting booths at the Pacific Northwest Fruit exposition was the one arranged by the Kitsap county berry growers, who had a small bed of strawberries illustrating two systems of planting. L. Finholm and F. D. Lillie were in charge of the booth and explained the methods to inquirers and also told of the success of the North Pacific Cooperative Growers, of which association both men are members.

"We use the matted row system for the Diemen variety," said Mr. Finholm. "This is a one-crop variety and seems to give better results through this type of planting. In the beginning a single row is planted in the spring with plants 24 to 36 inches in the row, and the rows 36 inches apart. The following fall the runners are weighted down with stones so they will take root and start new plants a few inches from the mother row.

"In this way we can get more plants to the acre and it is easier to pick the berries. They are an early bearing variety and a long-distance shipper. The fruit, however, is slightly smaller than some of the more common varieties.

"The Marshalls are always planted in single rows 2 1-2 to 3 feet apart and 12 to 18 inches in the row. Runners are not allowed to grow permanently, but the new plants are either taken up for new planting or destroyed. Everbearing varieties are also set out with the single row system."

Both Mr. Finholm and Mr. Lillie attended their booth during the entire 10 days of the exposition and felt that, although they were more tired at night than if they had been doing the hardest kind of work at home, their efforts were well worth while. They met many strawberry growers and orchardists, from whom they picked up ideas that were invaluable to them.

"It is not alone from the association standpoint that the show was beneficial," remarked Mr. Lillie, "but we have gone around to the men who are attending their booths and gotten acquainted with them whenever we had an opportunity. To me it has been one of the most profitable weeks I have ever spent."

Bee Notes

By GEORGE W. YORK.

It is reported that a beekeeper in New York state was so unfortunate as to have a bee crawl into his ear and sting him there. It continued to crawl deeper into the ear, so that it was finally necessary to have a physician get it out.

Better take sound advice and always wear a bee veil when working with the bees. It doesn't pay to go unprotected. A bee veil enables one to go right along with his bee work, as he knows the bees then just can't stab him in the face or on the head.

Paste for Labeling Tin and Glass.

Take one part honey, three parts flour, with water enough to cook thoroughly into a smooth paste, says H. H. Brown in Gleanings in Bee Culture. To use, leave the paste a trifle stiff, and dip the tip of the brush in water, then lightly over the top of the paste.

This paste will keep sweet a long time and will stick labels on tin and glass.

"Honey Week" in California.

The governor of California issued a special proclamation making the week of February 6 to 11 "California honey week." It was very appropriately the week of the annual meeting of the California Beekeepers' association, held at Visalia. Why not a "Honey week" in Washington? But it would be better for every family in this state just to declare a continuous "honey week" throughout the entire year, and every year.

Increasing Clover Acreage.

The American Farm Bureau federation suggests that the acreage of clover grown be increased everywhere. It has also been advised that beekeepers get busy and try to have grown more of the sweet clovers (Hubam and biennial varieties), as well as alsike clover. These are not only valuable forage crops for farm animals, but their blossoms are superior honey-producers. Alfalfa may also be added, especially in irrigated locations. Beekeepers can do much not only to help themselves in this matter, but also to get their neighboring farmers started right.

PLANT A POLLENIZING CHERRY.

Be sure your plum or cherry plantings include two varieties, unless you are positive that the variety of either which you plant is a self-fertilizing variety. One should know, too, whether the two varieties he chooses, either of plum or cherry, are interfertile, or whether an occasional tree of some other variety must be interspersed to secure a developing bloom. Among varieties successful as pollenizers are the Waterhouse, the Black Tartarian and the Black Republican. The Republican is the best shipping cherry. The Waterhouse commands a good price at the cannery. It is in color like the Royal Ann, but somewhat smaller and softer and is sweet. The Waterhouse is among the very heaviest in yield of the commercial cherries. The long-stemmed Waterhouse is desirable over the short-stemmed.

Gassing Insect Pests

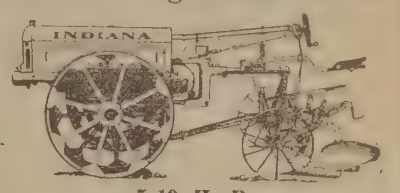
The airplane and poison gas played a large part in the recent World war. There is another world war going on, namely, a war on insect pests of orchard and field. It is not altogether to be wondered at that these two agencies of destruction are being brought into play in this present conflict.

The most successful experiment, and that upon which most of the high hopes seem to be based, was the spraying of a grove of ornamental trees in Ohio from an airplane, which completely destroyed the caterpillars infesting the trees at a single flight. The material used was calcium arsenate carried in a hopper below the plane. As the machine passed over the trees it heavily dusted with the poisonous material a belt of land 600 feet wide. It is reported that 99 per cent of the caterpillars were killed and that the ground, after the attack, was literally covered with the dead.

Now the department of agriculture is at work on a plan for the use of the airplane in fighting the south's ancient enemy, the cotton boll weevil. Millions have already been spent by the government in its fight on the weevil, and billions have been lost by reason of the fact that the boll weevil has not been destroyed. The boll weevil has for generations literally been eating the shirts off our backs and tires off our cars—for cotton, as much as rubber, is the basis of tire construction.

A report, also from Ohio, tells of an experiment in which powdered arsenate of lead was scattered by an airplane over an insect-infested orchard, with good results in eradication.

Unquestionably there are many problems to be solved in this new method of combating insect pests. But powdered poisons have long been used in the control of some insects operating under various conditions. Sodium fluoride, a powder, destroys chicken lice by suffocating them. Ants are destroyed in their ground retreats by the use of carbon bisulphide, a gas that is heavier than air and sinking to their tunnels suffocates them. Likewise, a dust or a gas that would deposit a stomach poison where it would be eaten by the insects should do the work as well as though deposited by the liquid spray method. The problems are to develop the gas or the poison dust that will reach the pest in the manner necessary.



SCALE ON THE CHERRY.

San Jose scale rarely attacks the sour varieties of cherry, but there is a cherry scale that does. The San Jose scale also chooses the variety when working among the plums, the Japanese plums being the varieties most susceptible to its attacks.

COMBAT THE CROWN GALL.

All orchard nursery stock that is found to be afflicted with crown gall should be burned instead of planted.

Farm for Profit in 1922

THE year 1921 did not entangle itself in the heartstrings of the American farmer. It went out under a cloud and he shed no tears. Yet this cloud, like so many of the clouds in life, had its silver lining.

The agricultural ills and ailments of 1921 brought with them their own remedies. At Washington today the governmental forces, wide awake to the vital co-relation of farm and industrial welfare, are fortifying the weak places in the business of farming. The farm public has created a hundred active, vigorous movements, many of them now bearing fruit. Freight reductions, better financing and better marketing conditions, lower labor and equipment costs, legislation tending to higher farm product prices—items like these build up the optimistic outlook for the summer ahead.

For you, the individual farmer, all the factors in the situation center of course on your own acres. In so far as you are a believer in the inevitable return swing of a pendulum, you will apply your best knowledge and the most efficient and modern equipment to make your fields produce bumper crops.

As you come to the spring season you will probably discover the need of one or more new machines and we want to call your attention to the standard popular equipment that makes up the **McCormick-Deering Line,** sold by a good dealer in your community. For reliable machines and equipment, repairs, and ever-ready service, consider the **McCormick-Deering Dealer** fully qualified to serve you.

These
McCormick-Deering
Products are in Demand at this Time of Year:

Tractors
- Titan 10-20
- International 8-16

New Market Law

Explained by Secretary Wallace

Asked to explain the significance of the Capper-Volstead cooperative marketing law, Secretary of Agriculture Wallace made the following comment:

The Capper-Volstead cooperative marketing law, signed by the president, is the result of several years of effort on the part of the farmers to clear up their legal and, therefore, their economic status from a national standpoint.

The new law expressly authorizes farmers and others engaged in the production of agricultural products, including nut and fruit growers, to act together in associations for the purpose of marketing their products collectively in interstate and foreign commerce.

On the other hand, the interests of consumers and the public generally are safeguarded, since the secretary of agriculture is authorized to proceed against an association of this sort if he finds that it is operating in restraint of trade to the extent that prices of farm products are unduly enhanced. For such cases a special proceeding is authorized. The secretary of agriculture will hold hearings and determine all the facts before action is taken in the courts.

These associations may incorporate, or not, according to the wishes of their members, and have capital stock if they so desire. They may also have marketing agencies in common. They must be operated for the mutual benefit of their members, but may also deal in the products of nonmembers, with the express limitation that the value of such products must not exceed the value of the products of their members. It is required that they comply with either of the provisions that no member shall have more than one vote and that dividends shall not exceed 8 per cent.

Farmers have always felt that conditions governing the marketing of their products are essentially different from those governing the marketing of the products of other industries, and that if they are to be on a comparable basis without being deprived of individuality in production, they must have the right to bargain collectively.

The new law expressly recognizes these contentions and greatly reduces the possibility of litigation, which farmers' marketing associations have frequently faced in the past when they have associated themselves together for their mutual benefit.

Wallis Tractor Price Cut

President H. M. Wallis of the J. I. Case Plow Works company has announced a reduction of the price of the Wallis tractor to $995. This includes a three-bottom plow. This same combination sold a year ago for $2023. The present price is the lowest at which this equipment has ever been quoted. Mr. Wallis says that the reduction is made as his company's contribution toward "relieving the frozen channels of agricultural and related business and helping the farmer restore agricultural conditions to normalcy."

ARE YOU READY?

Is your harness ready and your plows, harrows and drill in good shape? It will soon be time to go to the field for the spring work.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

WHITE LEGHORN AND ILL-A-HEE BARRED Rock chicks—Buy chicks this year that live and grow and are bred to lay. Butler White Leghorns and Ill-a-hee Barred Rocks are known for high average flock production. Before ordering elsewhere, write for circular telling how our breeding methods produce 200 flocks for our customers. All stock trap nested and pedigreed. Also get our prices on breeding cockerels and hatching eggs for each breed. Address Butler Poultry Farms, or Ill-a-hee Poultry Farm, Jennigs Lodge, Ore.

"FRESHLAID" WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for the heaviest egg production; every "Freshlaid" male is from a high record hen. Freshlaid Farms is one of largest and oldest chick plants in the Inland Empire. There is a real demand for "Freshlaid" chicks, especially from our old customers. We are sold out until May 1. Write at once if you wish May chicks. May chicks make ideal winter layers. Catalog. Freshlaid Farm, Colfax, Wash.

CHICKS FROM LEGHORN HENS. 228-EGG average; reduced price. Acme Poultry Farm, Cottage Grove, Ore.

POULTRY—Baby Chicks (Continued) 174

YESTERLAID EGG RANCH, KENT, WASH.—Dear Sir: Am more satisfied every day with the chicks received the 17th. They are certainly husky and while Feb. chicks may be supposed to lack vigor, it is certain yours lack nothing. May I increase my order 150 chicks to be delivered with my March 22d order. Irving Kunz, Hoquiam, Wash. Dear Sir: The chicks I got from you the 20th of May are fine. Please let me know your prices for 1922, as I am in the market again for a good order. A. E. Rackow, Hollister, Idaho. Dear Sir: Please let me know the date my 1000 chicks will be delivered. The chicks you sent me in 1921 are just wonderful. Got 70 per cent lay all winter. H. H. Coffey, Chehalis, Wash. We hatch 12,000 of these kind of White Leghorn chicks every 5 days from our own eggs. All sold out until May 1st. Orders for hatching eggs can be filled any time. Largest, most modern and up-to-date trap nest poultry ranch in the world. Yesterlaid Egg Ranch, Kent, Wash.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

TO TRADE—80 ACRES IRRIGATED LAND for stock ranch. E. Coulter, Burley, Idaho.

This Story of the Northland Will Begin in the Washington Farmer March 16

CHAPTER I.

Shad Trowbridge.

ON a foggy morning of early July in the year 1890, the Labrador mail boat, northward bound from St. Johns, felt her way cautiously into the mist-enveloped harbor of Port Pelican and to her anchorage.

For six days the little steamer had been buffeted by wind and ice and fog, and when at last her engines ceased to throb and she lay at rest in harbor, Allen Shadrach Trowbridge of Boston, her only passenger, felt hugely relieved, for the voyage had been a most unpleasant one, and here he was to disembark.

"Shad" Trowbridge, as the fellows called him, and as we shall call him—had completed his freshman year in college. When college closed he set sail at once for Labrador, where he was to spend his summer holiday canoeing and fishing in the wilderness.

The rugged surroundings thrilled him with promise of adventure. The historic post of the old fur traders, the boundless, mysterious forest, and the romantic life of the trappers and dusky tribes which it sheltered, were pregnant with interest.

"A rough-looking country," remarked the steward, joining Shad at the rail.

"It's glorious!" exclaimed Shad enthusiastically. "A real frontier! And back there is a real wilderness!—just the sort of wilderness I've dreamed about getting into all my life."

A half dozen natives on the boat wharf watched Shad curiously as he paddled to a low stretch of beach adjoining the wharf, and two of them strolled down to inspect his canoe when he lifted it out of the water and turned it upon its side at a safe distance above the lapping waves.

"Now she's what I calls a rare fine canoe," observed one, a tall, big-boned, loose-jointed fellow with a straggly red beard, and picturesquely attired in moleskin trousers tucked into the tops of sealskin boots, a flannel shirt, a short jacket, and the peakless cap of the trapper.

"That she be, Ed, an' a wonderful sight better'n th' bark canoes th' Injuns uses," agreed the other, a powerful, broad-shouldered, deep-chested man, who wore a light-cloth ackicy, but whose dress was otherwise similar to that of his companion.

"She have better lines than th' Injun craft," said the one addressed as Ed, eyeing the canoe critically.

"An' she's stancher—a wonderful lot stancher," continued the other.

CHAPTER XXI.

After the explosion: some cheerful talk with the thieves, and a strange but welcome message out of the storm.

As I struggled to my feet out of the wreck I was so dazed that I had to lean against the wall to keep from falling. I felt something running down my face and at first wondered what it was; then I saw it was blood. One of my arms felt numb and I was afraid it was broken, and my hands were all torn and bruised. I could not see into the other building for the smoke and falling snow, but I could hear the groans and curses of the men. I thought that if any of them were able they might come to take revenge on me, and that I best go away, especially as I was helpless with the handcuffs still on my wrists. I managed to pull open the front door and ran to Taggart's, thinking that I might get the handcuffs off in some way.

I found the box from which Pike had got them. There were two other pairs, with keys. I took the keys in my teeth and tried, but neither would fit mine. Then I went to the tin shop upstairs. There was a file on the bench and I managed to get this into the vise and began rubbing the chain up and down on the edge of it. It was the hardest work I ever did, but I soon saw that I could get my hands free in time if I kept on. Once or twice I heard Pike shouting something and I could still hear Kaiser barking in the hotel.

I don't know how long it took, but at last I got my hands separated, though, of course, the clasps were still tightly around my wrists. I looked out of the window and saw that the sleigh was in front of the bank with a pair of the outlaws' horses hitched to it. I was afraid that the safe had been blown open with the first explosion and that they were getting the money after all. I ran out the back door and along behind the buildings to the hotel. Kaiser bounded around me and Pawsey was again in her old place over the door.

I peeped through the cracks in the boards over one of the front windows. The whole front of the bank was blown away, but I could just make out through the snow that the inner door of the safe was still closed. Two of the men were lying in the bottom of the sleigh, motionless, whether dead or alive I knew not. Pike was on the floor of the bank, propped up on one elbow, giving orders to the one they called Joe, who was helping the fifth man into the sleigh, who seemed badly wounded and sat in the bottom of the box.

Then Joe went back to help Pike. He took him by the arms and was dragging him toward the sleigh, when I suddenly made up my mind that I would keep Pike. I went to the closet and got Sours' double-barreled shotgun. I knew there was no weapon that they would fear so much at close range. I opened the door and walked out into the street with it.

"Just leave Pike right here," I said. "I'll take care of him. The rest of you go on."

I guess they thought I was buried under the rubbish in the drug store, because I have seldom seen men more astonished. I walked up closer. Even Joe looked half wrecked and his face was all blackened with powder.

"Hello, Jud," called Pike. "You ain't a-going to strike a man when he's down, be you, Jud? I might 'a' been harder on you many a time than I was, Jud."

"No, I won't hurt you, but you've got ot stay, that's all," I said. "Help him over to the hotel and then go on with the others and don't come back," I added, looking at Joe.

There was nothing for him but to do as he was told, because I held the gun on them both, and they had heard the click as I drew back the hammers. Pike's left leg seemed to be broken and he was all burned and blackened with the powder. I sent Joe for a mattress, which he put on the floor of the office and rolled Pike on it. Then he drove off with the others.

So that is the whole account of the second visit of the outlaws to Track's End, just as it all happened, Saturday, March 19.

"Now, Pike," I said, ater Joe had gone, "the first thing—out with that handcuff key!"

He took it from his pocket and gave it to me. I unlocked each of my bracelets. They left deep red marks around my wrists. Pike asked for a drink of water and I got it for him. I could see that he was in pain.

"You've played it on us again, Jud, I'll be hanged if you ain't," he said to me. "What'd you have under that counter, Jud?"

"A can of blasting powder," I answered. "Dangerous place to store it when there's explosions, and kerosene lamps and hot stoves, and fires, and such truck around. It done us fellers up, and that's a fact."

"Well, I wasn't trying to make you feel at home," I replied. "How did you happen to be blowing open other folks' safes?"

"Oh, it's all right, Jud, it's all right," he said. "I ain't finding no fault. Only I think you'd 'a' done better to join us and get your share."

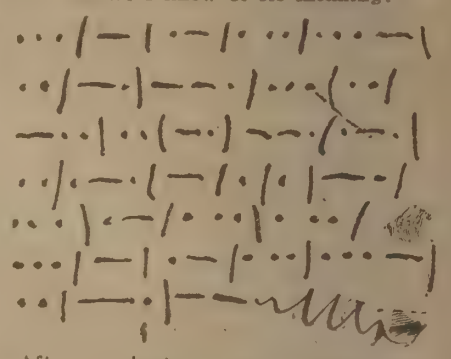
Though I still felt pretty dizzy and weak I started out to look about town. I found that the inside door of the bank safe was still tight shut, though the outer one was blown off. The building was wrecked and the drug store was not in much better shape. I could see that the bank had been afire, but that Joe had put it out with water from the well.

Outside the barn I found Dick and Ned the pony the Indian had taken, with three of the gang's horses which had been left behind, huddled together trying to keep out of the snow, which was still coming down at a great rate and was being swirled about by the wind. I let them in, and they were all very glad to get some feed, as were likewise the cow and chickens. I found that the Indian had pried open the back door with a crowbar from among the blacksmith's tools.

Night was already coming on and I was so tired and sleepy that I could scarce keep up. So I made Pike as comfortable as I could, and went to bed and slept like a log.

The first thing I knew in the morning was that the storm had turned into a raging blizzard. It was not yet very cold, but the snow was drifting as fast as it had any time during the winter. I found Pike more comfortable. I had hoped for the train, but the storm discouraged me. I began to wonder what I was going to do with him. That his leg was broken was certain, and I almost wished that I had let him go with the others.

It was Sunday, and the first thing I did after breakfast was to write my regular letter to my mother, telling her all that had happened the last week, and it was a good deal. Then I started out to take another look around town. My sleep had done me a world of good, though I still felt stiff and lame.



It was impossible to do much in the storm, but I covered up the bank safe with some blankets, and nailed boards over some windows in other buildings which had been broken by the explosion. I finally turned up at the depot and went in to see about the fire.

As I opened the door I was astonished to hear the telegraph instrument clicking. I knew the line was down and could not make out what it meant. I understood no more about telegraphing than Kaiser, but in visiting Tom Carr during the fall I had learned to know the call for Track's End, which always sounded to me like clicket-ty-click-click, click-et-ty, over and over again till Tom opened the switch and answered. Well, as I stood listening I heard this call for Track's End, clicket-ty-click-click, clicket-ty. Then I saw that the line must have been repaired, but if this were so a train must have come nearly through; otherwise the repairmen could not have reached the break, which, I remembered, Tom said was just beyond Siding No. 15, 14 miles east of Track's End.

I went to the table and sat down and listened to the steady clicking, the same thing, nothing but the call. It gave me a good feeling even if I didn't know where it came from. I could not understand why any other office should be calling Track's End, as they must all know the station was closed for the winter. Then it came to me that a train must be on the way, and somebody thought it had got here.

Just to see if I could, I reached over, opened the switch and tried giving the Track's End call myself. Of course I did it very slowly, with a long pause between each click, but I thought I would show the fellow at the other end that Track's End wasn't quite dead after all. Then I closed the switch, and instantly was surprised to hear the call repeated, but just as slowly and in the same way that I had given it. It came this way two or three times, then I gave it as best I could, then it came the same way once more.

After this there was a long pause, and then it began to click something else, very slowly, dot, dash, dash, dot, and so forth, with a long stop between each. I picked up a pencil and marked it down, slowly, just as it came. Every two or three clicks there was a very long pause, and I would put down a monstrous big mark, thinking it might be the end of a letter, and when it stopped this is what I had, just as I wrote it down (I have the paper to this day), though it might as well have been Greek for all I knew of its meaning:

After a minute or two it began again, but soon saw that I was getting the same thing. I leaned back in the chair and wished that I could read it. Then I sat up with sudden new interest, wondering if I could not find a copy of the Morse code somewhere and translate the message. It didn't seem likely that Tom would have one, as he was an old operator, but I began rummaging among his books and papers just the same. I had not gone far when I turned up an envelope directed to him on which was some printing saying that it contained a pamphlet about books for telegraphers. I opened it, and on the first page, as a sort of trademark, was what I wanted. In 10 minutes I had my message translated. It read: "Starving. Siding 15. Carr."

CHAPTER XXII.

The last chapter, but a good deal in it: a free lodging for the night, with a little speech by Mr. Clerkinwell: then, how Kaiser and I take a long journey, and how we never go that way again.

When I knew what the message said I saw that a train must have got to No. 15, and I jumped up and started for the door, then I ran back again and slowly spelled out O. K. on the instrument, and without waiting to see what came in reply hurried over to the hotel as fast as I could go.

It was now 11 o'clock, and though the storm was as furious as ever I was determined to set out and try to reach the siding. If it had been before the thaw, with all of the winter snow on the ground, I never should have thought of doing it, but most of the old drifts were either gone or frozen so hard that they could be walked over without the least fear of breaking down, and as for the new drifts they were soft and not yet deep. I first thought of taking the horses and large sleigh and of keeping on the railroad track, but I remembered that there were a good many culverts and little bridges which I could not cross that way, and I knew to leave the track would mean to be lost instantly. So I saw that the best I could do was to take Kaiser and the small sled.

I soon had this loaded with all the provisions that I thought we could get through with, though the selection was poor enough. But I got a lot of coffee from the store, with bacon and canned Boston baked beans and other such things. There was a little of the buffalo meat left, and as I had kept it buried in the snow during the thaw it was still as good as ever. This, with what eggs and other things in the hotel which I had, I put on, covered it all snugly with a blanket, tied the load firmly and was ready. I told Pike where I was going, though the next moment I saw from the look on his face that I should not have done so. Still, I

could not see what harm he could do, with his bruises and broken leg. I left food and water where he could reach them, and started off, walking beside Kaiser and helping him drag the load.

It was just noon when I got off. We went to the station and started down the track. It was impossible to see more than a few rods, but the wind, which all along had been in the northeast, had now shifted to the northwest, so it was partly in my back. It was both snowing and blowing, and we waded through the damp, heavy, new snow and slipped and stumbled over the old drifts. I soon saw that there was a big job before us, and I had not expected any pleasure excursion.

The first accident was when I fell through between the ties over a culvert up to my chin. It was too high to get back that way, so I went on down and floundered out at the end and so fought my way back up. We soon got used to these, and generally I told where they were by the lay of the land, and either we went round them or walked carefully over

Mr. Clerkinwell took off his watch and chain.

on the ties. But before I had gone three miles I saw that my only hope of reaching the siding that night was in the wind going down, but it was all the time coming up.

But we plodded on, in some places making pretty good time, but, on the other hand, we often had to stop to rest. Kaiser seemed not the least discouraged, and when we stopped even tried to wag his tail, but it was too bushy a tail to wag well in such a wind. After a while the blizzard became so blinding and the track so deep with snow that we had to leave it and follow the telegraph poles on the edge of the right of way, stopping and clinging to one pole till a little swirl in the snow gave me a glimpse of the next one; then we would plunge ahead for it, and by not once stopping or thinking I would usually bump up against it all right, though when I had gone 50 steps if I did not find it I would stop and stand still till a little lull made it so I could see the pole, and then sometimes I would find that I had passed it a few feet to one side.

At last (but too soon) I thought I noticed that the light was beginning to fail, and it was certainly all the time growing colder. A little farther on we came to a deep cut through a coteau. The cut was so filled with new snow that we could not wade through, and the side of the hill as covered with the old snow and so slippery that we could not scramble over. The only thing to do was to go around it. This I thought we could do and not get lost by keeping close to its foot all the way around.

We started and plowed on till I thought it time to see the telegraph poles again. We went on, but I saw the hill was not leading us right, and turned a little the other way. Another coteau was in our path and I turned to avoid it. For another five minutes we went on. I turned where I was sure the railroad must be, when suddenly it seemed as if the wind had changed and was coming out of the south. I knew it undoubtedly had not, but by this sign I understood that I was lost. I felt dazed and bewildered and was not sure if I were north or south of the track. But for another 15 minutes we strugged on. I had lost all sense of direction. I stopped and tried to think. Every minute it was growing colder; how long I stood there I don't know, but I remember that I heard Kaiser whine, and started at it, and realized that I was growing sleepy. I knew what the sleepiness which comes on at such times means, and I turned around square to the wind and started on.

A dozen steps away we came face to face with a big new snowdrift, its top blown over like a great white hood. I guessed that there was an old bunk under this one. I took a stake from the sled, dropped on my hands and knees and began to poke about for it. I soon found it, broke through the frozen crust with the stake and began pawing out a burrow with my hands. I dug like a scared badger and in a few minutes had a place big enough. I wriggled out, pushed Kaiser in, took the blanket from the sled, backed into my snow cave again and rolled up as best I could in the blanket. In five minutes the mouth of the burrow was drifted over and we were in total darkness.

I was not afraid to sleep now, as I knew, what with the snow, my big coat, and the blanket, not to mention Kaiser, I would be safe enough from freezing, so that is what I did till morning, scarce waking once. When I did wake, though I knew no more than anything if it were morning, I could no longer hear the wind roaring, so I burrowed out, which was no small job, either, since I had to dig through a wall of snow, packed solid as a cheese.

But when Kaiser and I burst out, like whales, I guess, coming up to breathe, we found it clear and calm, with the sun just peeping up above a coteau and the frost dancing in the air. And we were not five rods from the railroad, though in that blizzard we could no more see it than we could Jericho. It took half an hour to dig out the sled and get started, with Kaiser barking, and his breath like a puff of a locomotive at every bark, it was so cold. I put on the skis now (which I had had tied on the sled) and off we went over the drifts, now packed hard, at a good rate.

It was no more than 10 o'clock when I saw a white cloud of smoke far ahead and knew we were coming to the siding, and Kaiser saw it, too, I think, and we both started to run and couldn't help it. And half a mile farther we saw a man coming slowly, and who was it but dear old Tom Carr!

I think I never was so glad to see anybody in my life. The poor fellow was so weak that he could hardly stand, but he was making a start for Track's End.

"Jud," he said, "we started out Wednesday, with a dozen passengers, as many shovelers and three days' food. We got to No. 15 Saturday. Then the storm came and the food was about all gone. Yesterday the storm kept up and the men could have done nothing even if they had had food. This morning they are at it, but they are so weak that they can't do much, but with what you've got on your sled we'll get through."

He went back with me, and there were Burrdock and Sours and Allenham and some others, all shoveling at the cut with the men, and in the car was Mr. Clerkinwell, now recovered from his sickness, but weak from the lack of food. I won't try to tell how glad they were to see me, but I was gladder to see them. I felt that I was out of the prison of Track's End at last, and so many times I had thought I never should get out alive!

"And why didn't you die a thousand times from loneliness," cried Mr. Clerkinwell, after he had talked a few minutes, "if from no other cause?"

"Oh," I answered, "I had some company, you know; then there were callers, too, once in a while." Then I said to him that "I wrote every Sunday to my mother," at the which he patted me on the head, just as if I weren't taller than he!

The men all came in and we got up a sort of a meal; at least there was plenty of coffee, bacon and beans. Then they went at the shoveling again, the engineer got up steam and soon we left the short platform and little cube of a house at the siding behind. There was a snowplow on the engine, and the men now worked with so much energy that we bucked along through the cuts, and before sundown were at Track's End.

I had told part of my story, and we all went over to the Headquarters house, Allenham to arrest Pike. He was gone. The barn had been broken open that morning and one of his ponies taken out. How he ever did it with his broken leg was more than any of us could tell, but he had done it, and it seemed no use to try to follow him. I saw my mistake in telling him so much, but it was too late to remedy it.

The next day another train came, bringing a whole crowd of Track's Enders, and that night they held a little meeting at the hotel and were for giving me a reward for what I had done (which was no more than I had been left to do), but I told them no, that Mr. Sours had paid me my wages according to agreement and that I couldn't take any reward, but when Mr. Clerkinwell got up and took off his watch and chain (gold they were, you may be sure) and said I must take that whether or no, so that when I "looked for the time o'day I would always remember that a townful of people, and especially a certain old gentleman, thanked me and did not forget what I had done"—when Mr. Clerkinwell did this, I say, and I guess there were tears in his eyes, what could I do but take it? and take it I did, and wear it to this day.

Mr. Clerkinwell told me afterward that there was a full $20,000 in the safe.

So that is all there is to tell of my strange winter at Track's End, so many years ago. Three days later the regular trains began to run, and the first one took all of my letters to my mother, and no more than two days after she got them I was there myself, bringing only one important thing more than I had taken away (beside experience), and that was Kaiser. I had asked for him and got him; first I had thought to take away Pawsy, too, but concluded to leave her with Mr. Sours, where she could get on the door in case of trouble. And since, though I have done my share of wandering about the world I have never again visited Track's End; nor do I think I want to go back where the wolves howled so many dismal nights, and where the other things were worse than the wolves. (The end.)

A War on Film

On the film that ruins teeth

Dental science has declared a war on film. Millions of people, half the world over, have joined it. And leading dentists everywhere are securing new recruits.

This ten-day test will show you the results. Make it and note the change that comes in cleaner, prettier teeth.

Makes teeth dingy

Film is that viscous coat you feel. It clings to teeth, gets between the teeth and stays. It makes white teeth look dingy. And most tooth troubles are now traced to that film.

Film is what discolors, not the teeth. Film is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea. Many serious troubles are now traced to them.

Failed to end it

Old teeth cleaning methods have failed to end film. Much was left to night and day threaten serious damage. That's why well-brushed teeth discolored and decayed.

Dental science has for years sought ways to fight that film. Two effective methods have been found, and able authorities have well proved their efficiency.

Now those methods are combined in a dentifrice called Pepsodent—a tooth paste based on modern dental knowledge. And to millions of people it has brought a new era in teeth cleaning.

These five effects twice daily

Pepsodent combats the film in two effective ways. It leaves teeth highly polished, so film less easily adheres.

It also multiplies the salivary flow. That is Nature's great tooth-protecting agent. It multiplies the starch digestant in the saliva. That is there to digest starch deposits that cling. It multiplies the alkalinity of the saliva. That is Nature's neutralizer of acids which cause decay.

Every application brings these five desired effects. All of them are deemed essential. But old methods never brought them.

Send the coupon for a 10-day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

In a week the results will surprise and delight you. And your home, we believe, will adopt this new method. Don't wait longer. Cut out the coupon now.

Pepsodent PAT. OFF. REG. U.S.

The New-Day Dentifrice

A scientific film combatant, whose every application brings five desired effects. Approved by highest authorities, and now advised by leading dentists everywhere. All druggists supply the large tubes.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Aermotor Towers are Towers of Strength

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Several have sent in recipes for various things such as grape juice and other things which are just now out of season; all have been filed away awaiting the time when you women will be wanting to know how to make them. When the time comes they will be printed. Some of you have not given me names and addresses so I take this way of thanking you. Please, all send addresses.—A. W. B.

This is the season for soups and here is one called Scotch soup: 1 qt. boiling water, 1 1-2 cups of oatmeal, 1 tablespoon of finely chopped pork, 1 tablespoon of grated or ground onion, 1-2 cup of tomato juice. Season to taste with salt and pepper and let cook for about an hour stirring often to prevent scorching.—Mrs. M. M. C.

Dear Mrs. M. M. C., did you leave out something from your recipe for fruit pudding which you sent? It seems to me to be just a simple cake recipe as there is no fruit mentioned in it.—A. W. B.

Dear Mrs. Barland: Here is a good way to can apples: Select good, sound, tart apples, core them and fill the cavities with sugar and bake until tender in a pan with a little water, but not too soft to lift out. Place in sterilized jars and fill the jars with boiling sirup made of half sugar and half water boiled together for about two minutes. Seal the cans same as any canned fruit. These are good with whipped cream.

I would like to know how to make raised buckwheat cakes.—Mrs. G. H.

Dear Mrs. G. H.: I like best half white flour and half buckwheat.

Buckwheat cakes: For a family of four or five take a full quart of warm water, add half teaspoon of salt and half cup of liquid yeast or one-third of a compressed cake. Set a sponge with the flour half white and half buckwheat a little thicker than it should be for frying and in the morning add half cup of water in which half teaspoon of soda is dissolved. This will make them thin enough to fry nicely. If too thin add a little white flour. You should leave about a cupful of the batter for raising the cakes the next morning. As you continue the use of the batter it will grow more sour and you will need to increase the amount of soda, but too much will injure the flavor of the cakes. I think graham flour good to mix with buckwheat instead of white flour for a change.

Mrs. H. G. gives a remedy for easing whooping cough which must be good as several others have given the same. I will send it to any one who writes for it. —A. W. Barland.

A good suggestion for saving the hems of sheets and table cloths. Always hang them from the corners doubled back and the wind will not whip them out. Rub grease or butter on fruit stains before washing to remove the stain.—Mrs. H. H., Wendell, Idaho.

Dear Mrs. Barland: Will some one tell me how to clean a grass rug and how to make corn fritters.

Here is a good catsup recipe: Use good cooking apples, season with red pepper, salt, sugar and vinegar and color with cake coloring;. bottle and it will keep till used and is as good as that made of tomatoes.—"A Young Housewife."

Corn fritters: .To 1 qt. can of corn add 2 or 3 well beaten eggs and a tablespoon of flour and a little salt. Have a frying pan ready with plenty of butter or half butter and half meat frying and when good and hot drop the corn from a spoon into little patties and fry as you would pancakes. These are very good.—A. W. Barland.

Dear Sister Barland: I am 55 years old, have raised five children and never had a doctor. I have seven grandchildren.

I was born in Iowa, came to California when I was 4 1-2 years old and we came across in an emigrant train.

A 100-pound sugar sack makes four good napkins. You can ravel them out all around and have fringe. Four sacks joined together with coarse rickrack braid makes a good table cloth.

I would like the address of that lady who wrote last summer who lived 30 miles from a railroad. I would like to write to her.—A Reader.

My Dear Sister: You have not given either name or address, so how can I give you the information you wish? You ask for the last of the story of Big Smoke Mountain, but I can not send that either without your address. I infer that you live in Oregon, but am not sure of that. I am very much interested in your journey across the plains in the emigrant train and I want you to tell me all you can about it. I have never met but two people who came across that way. I am ready for the surprise whenever you send it on. I hope to hear from you soon with name and address, which will not be printed unless you wish. Please, everybody, send name and address. I can do so much more for you if I have them.—Alice W. Barland.

Dear Mrs. Barland:, I enjoy the Family Circle very much. Last year I did the housework, washing and ironing and all, for my father, brother and sister, and attended school all the time and passed my grade with honors. I am not a very old girl, but came out well at the last. I am writing for information concerning the addresses of private Protestant schools for girls in or about Spokane. Please let me know soon as possible.—F. C.

My Dear F. C.: If you had given me your name and address I would send you a personal reply giving you the information you wish. Another case like the two preceding letters where information must be delayed because I don't know how to reach you. Soon as other letters are received from you good sisters with name and address you shall have the information asked for.—Alice W. Barland.

A Christmas greeting came in too late for publication, but I thank the one who sent it. She wishes all the Circle a "bright and happy new year" and signs herself "A Young Reader."

Where to Plant Flowers

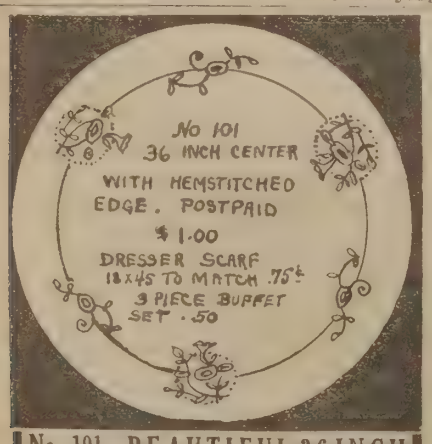
It is a principle well known to the landscape gardener that planting the lawn and garden according to various schemes will greatly increase their apparent size and their beauty, or will correspondingly diminish both. Little, choppy beds of geometrical design, set in the midst of the lawn space, will cut even a fair-sized expanse to most unimpressive dimensions. They will also break up an otherwise graceful effect, in nearly all cases. On the other hand, the disposal of the flowers in borders or shrubby clumps at the outer edges of open spaces and around the buildings will soften abrupt, square corners and afford taller and lovelier background for the low, flowering annuals, bulbs, etc. By judicious selection of the right exposure for each, one may give it the right shelter, sun or shade, turf or open soil, and the possibilities of color massing are a never-exhausted world of delight.

In almost any one species of annual or other small flowering plant, masses of one color are, of course, far surer to be effective than the results obtained by purchasing the seed in "mixed colors," though now and then a really charming bit of helter-skelter old-fashioned medley does happen.

Hints for Homemakers

By MRS. C. B. SMITH.

The leaves from old mail order catalogues, being soft and thin, are almost as good as tissue paper for polishing class or metal.



Soften paint on a window pane with turpentine and scrape off with a dull knife.

To impart a nice polish to the top of the range, rub with a cloth dipped in melted paraffin, to which has been added a few drops of kerosene. Polish with a soft, dry cloth.

The odor of onions may be removed from the vessel in which they have been cooked by partly filling with water and adding a handful of clean wood ashes or washing soda. Put on the stove and allow the water to come to the boiling point.

When the portion of the contents of a fruit jar remaining after emptying adheres to the inside of the jar and becomes dry and hard to remove, put in a teaspoonful of concentrated lye and fill with water. After soaking several hours the jar will clean easily.

A wastebasket in the kitchen is a litter saver. If no other kind is available, a banana crate, cut off at the second hoop, will answer the purpose very well. A clothes hamper that takes up little room in a corner of the closet may also be fashioned from a banana crate.

No. 101---BEAUTIFUL 36-INCH CENTERPIECE, stamped on finest quality Indian Head and hemstitched for crochet edge. Sent postpaid for $1.00.

THREE-PIECE BUFFET SET TO MATCH, hemstitched, complete for 50c. 18x45 Dresser Scarf to match, all hemstitched, and ready to be embroidered. Postpaid for 75c. All three sets for $2.25, postpaid.

Harvey F., 5949 Chicago Ave., Chicago, Ill.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Sometimes we must speak very plainly, even though some one is disturbed by what we say. About this particular thing I have in mind today I want you to worry a bit.

Dr. Copeland.

Colds and coughs in children should not be neglected. You can hardly hope to have your child escape having an occasional cold, although much can be done to lessen the danger. But when your child is thus afflicted there must be watchful care to make certain that he fully recovers.

Did you know that almost every case of tuberculosis is due to an infection taking place in childhood?

I wonder, too, if you know that tubercular infection is very, very common. An eminent Italian pathologist found evidence of active or healed tuberculosis in 597 out of 600 bodies he examined. Of course, most of these were adults.

Among persons who live wholesome and hygienic lives tuberculosis is not so common as this, but its frequency is all too common no matter how optimistic may be the observer.

Many children are predisposed to tuberculosis. They have enlarged glands, bone trouble or give positive response to the tubercular test, even though they may appear perfectly well.

Fortunately, many children have an immunity to this disease and seem able to resist it, even if they are constantly in contact with it. But other children are not so blessed. The latter are in danger of tubercular infection.

The germ of tuberculosis is not very active. It is easily killed. A few hours of sunlight will end its career.

It is when one is run-down that he is in danger. Under such circumstances the powers of resistance are lowered and any disease-producing germ may take advantage of the opportunity to gain access to the tissues of the body. The germs are liable to be lurking in the nose and throat and when the body is weak from illness or overwork they have their chance.

Exposure, dust, wrong eating habits, loss of sleep and fatigue may lower the resistance and permit the "taking" of a cold. The inflammation of the nose, throat and bronchial tubes may extend into the lungs. Then the soil is all ready for a germ like that of tuberculosis.

A cold and a cough should not be neglected. Make it your business to get rid of it, and in this way to protect your child or yourself against the danger of tuberculosis infection.

Just Folks

A man, now in middle life, who has won an enviable position as a farm scientist, was telling me the other day of an early incident in his education. His early days were spent on a state of Washington farm, some 40 miles from a high school. That high school in the town looked good to him. It also looked good to another farmer boy, his neighbor. These two farm boys planned, only as farm boys can plan. After the harvesting season they took their team and farm wagon, loaded it with a little cook stove, a sack of potatoes and some blankets. They journeyed to the town with the high school. They found a merchant in the town who appreciated their situation. He had a wooden block containing rooms which he rented. The boys were able to get one of these rooms for $1 a month. They put up their little cook stove, unloaded their sack of potatoes and found their dream of a high school realized. Soon another of their farm boy neighbors joined them. That third farm boy today is at the head of a permanent department of the state educational institution.

As they are recalled now, those were days of real sport to these men in middle life.

A Deep Study

"What is this spiritualism all about?"
"Remains to be seen."

Views of His Own.

News agent: "Here are some fine post-card views taken along our railroad. Would you like some of them?"

Passenger: "I should say not! I have my own views about this railroad. Ex.

Was On the Job.

A man who was wanted by the police had been photographed in six different positions, and the pictures sent to the chief of police of a provincial town, where it was thought likely the fugitive was in hiding. After the lapse of a few days the following reply reached headquarters:

"Sir: I duly received the portaits of the six miscreants whose capture is desired. I have arrested five of them, and the sixth is under observation and will be secured shortly."—Tit-Bits.

He Inherited It.

"Late for reveille, again, I see, O'Malley," snorted the irate captain. "How do you account for this persistent tardiness?"

"'Tis inherited, sir," answered Private O'Malley. "Me father was the late Michael O'Malley."—American Legion Weekly.

Which Is Seldom.

Deceit is the quality that makes a man put on socks that have no holes on the day he intends to buy a pair of shoes.—Detroit Free Press.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3504. Frock for the young miss. Cut in three sizes: 12, 14 and 16 years. A 14-year size will require 4 3-8 yards of 36-inch material. Price 10 cents.

3886. Girl's guimpe dress. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size requires 1 3-4 yards of 32-inch material for the guimpe and 3 1-2 yards for the dress. Price 10 cents.

3889. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. The guimpe will require 1 1-2 yards of 27-inch material, and the dress 2 3-8 yards for a 6-year size. Price 10 cents.

3892-3571. Ladies' costume. Slip 3571, cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. It requires three yards of 36-inch material for a medium size. Blouse 3892, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure, and requires 3 3-4 yards of 40-inch material. Two separate patterns. 10 cents for each pattern.

3370. Girl's blouse suit. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size will require 3 7-8 yards of 38-inch material. Price 10 cents.

3885. Child's romper suit. Cut in four sizes: 2, 4, 6 and 8 years. A 4-year size requires 2 7-8 yards of 32-inch material. Price 10 cents.

3873. Girl's cape. Cut in five sizes: 6, 8, 10, 12 and 14 years. A 12-year size requires 2 5-8 yards of 54-inch material. Price 10 cents.

3697. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size will require 5 3-8 yards of material 44 inches wide. The width of the skirt at the foot is 2 1-8 yards. Price 10 cents.

3254. A dainty apron. Cut in three sizes: Small, medium and large. A medium size will require 2 1-2 yards of 36-inch material. Price 10 cents.

3716. Ladies' dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 6 6-8 yards of 32-inch material. Without panels 4 1-4 yards. The width of the skirt at the foot is two yards. Price 10 cents.

3897. Ladies' house gown. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 5 5-8 yards of 36-inch material. Price 10 cents.

3718. Ladies' house or day dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires six yards of 36-inch material. If made as illustrated it will require 4 3-8 yards of plaid and 1 5-8 yards of plain material 36 inches wide. The width of the skirt at the foot is about 2 1-4 yards. Price 10 cents.

CATALOGUE NOTICE.

Send 12 cents in silver or stamps for our up-to-date spring and summer 1922 catalogue, showing color plates and containing 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various, simple stitches), all valuable hints to the home dressmaker.

High Points in News of the Week

United States Attorney General Daugherty has announced that very soon he will make public schedules showing the retail prices of food, fuel and clothing at representative points throughout the United States as compared with the cost of manufacturing these articles in corresponding localities. The schedule will be the result of a survey conducted by the department of justice with a view to finding out whether or not retailers were charging exorbitant prices for essential commodities.

In a court case in Chicago last week testimony was given indicating that the cost of living in that city had gone down between 35 and 40 per cent below the high point of two years ago.

* * *

The United States senate this week takes up the open debate of the four-power treaty between this country, Great Britain, France and Japan for the control of affairs in which these four nations are interested on the Pacific ocean. One of the seven treaties submitted to the senate by President Harding following the recent conference in Washington on the limitation of armament has been ratified by the senate. It is that referring to the control of the Island of Yap.

* * *

A press dispatch from Washington, D. C., says that Senator Stanfield of Oregon is coming west soon to work out plans with wheat growers and their organization under which the war finance corporation can make loans on the growing crops of northwestern wheat this year. If the plan materializes it is hoped that as much as $5 per acre can be secured.

* * *

The United States supreme court has rendered a decision that the interstate commerce commission has power to govern railroad rates on traffic wholly within a state as well as traffic that crosses interstate lines. The decision is not understood to indicate any likelihood of widespread application of the principle involved, but declares that since the interstate commerce commission is responsible for the development of a great interstate commerce system, no state should be empowered to interfere with such development by the establishment of either inadequate or excessive rates within such state on an interstate railroad.

* * *

The United States supreme court last week in a formal case decided that the women's suffrage amendment to the Constitution is valid.

* * *

A dispatch from Washington, D. C., indicates that President Harding will probably make his trip to Alaska in the early summer. Senator Poindexter of Washington is endeavoring to have the president make a personal tour over the proposed Columbia basin irrigation project while in the northwest en route to or from Alaska.

* * *

A report from London says that the British government is planning a reduction of about $250,000,000 in the appropriations for its army and navy for the coming year.

* * *

The British government has decided to give Egypt independence as soon as the people of that country are able to work out a form of government that will safeguard their own interests and those of Great Britain. Egypt has heretofore been under a British protectorate.

* * *

President Harding recently went before congress and recommended the adoption of legislation to give financial aid to American merchant ships. He estimated that the aid necessary for the first year should approximate $15,000,000, with a later subsidy, either direct or indirect, of not to exceed $30,000,000 per year.

* * *

A conference of governors and their representatives from the four Pacific coast states last week at Portland laid plans for starting a nationwide campaign against the use of narcotics. A special effort will be made to secure national legislation prohibiting the sale of these drugs.

* * *

Announcement was made last week that Secretary of the Interior Fall had made a formal ruling that hereafter no leases will be given to Japanese on farm land lying within Indian reservations. This ruling is of special interest in the Yakima valley, where approximately 2000 Japanese now have leases running from one to three years on Yakima reservation land.

* * *

The early resignation of Premier Lloyd George of England was predicted last week, but later reports indicate that he has withdrawn a threat previously made to resign. Wide differences of opinion within the British cabinet, of which Mr Lloyd George is head, are responsible for the threatened resignation.

* * *

The executive council of the American Federation of Labor recently went on record as in favor of the repeal of the Volstead prohibition enforcement act and of enactment in its place of a measure permitting the manufacture and sale of wine and beer. The Volstead act is the measure passed following the ratification of the national prohibition amendment by the legislatures of 45 of the 48 states of the union.

* * *

The American legion has announced its intention of beginning a campaign to obtain employment for about 700,000 veterans of the World war who are now idle.

* * *

General Pershing last week expressed vigorous opposition to the proposal of congress that the standing army of this country be reduced from 150,000 to 115,000 men. General Pershing advocates at least 130,000. The present actual strength is said to be about 137,000.

* * *

A new plan for paying the proposed national soldiers' bonus was discussed last week in congress. It would provide for the issuance of government treasury certificates upon which local banks throughout the United States could advance money to the ex-service men, thereby virtually making these local banks lenders to the national treasury.

* * *

Hubert Work, first assistant postmaster general, has been appointed by President Harding to become postmaster general, taking the place made vacant by the resignation of Will H. Hays. Mr. Hays resigned to become head of the National Moving Picture association.

GUERNSEYS FROM WISCONSIN.

Twenty-seven head of purebred Guernseys purchased in Wisconsin by A. L. Wallace of Outlook, executive committee member of the Yakima Valley Guernsey Breeders' association, were shipped by freight February 3 and arrived in the lower valley 10 days later. Ebert Herron, a new man in the Guernsey business and a resident of the Liberty district, northwest of Outlook, accompanied Wallace and purchased some for himself. Some of them will be added to the Wallace & Fordyce herd and the rest will be consigned, together with some offerings by members of the association, to an early spring sale, the date for which has not yet been set.

Farm Business and Markets Outlook

(Continued from page five.)

CHEESE BUYERS CAUTIOUS.

The advance in the cheese markets two weeks ago has checked the demand, as buyers are purchasing only for their immediate needs.

FRUITS AND VEGETABLES.

Idaho, Maine, Montana, Nebraska, North Dakota, South Dakota and Washington have shipped more potatoes than for the entire season last year, but shipments from Michigan, Pennsylvania and Wisconsin have decreased this season.

The potato market has been inclined to drag. Northern sacked whites are bringing $1.55@1.60 per 100 lbs. f. o. b. shipping points and $1.70 to $2 in the Chicago carlot market.

The apple market shows little change. Baldwins are bringing $7.50 to $8.50 in consuming markets. Northwestern extra fancy boxed Jonathans are bringing $3 to $3.50 per box. The supply of apples for the rest of the season is slightly above the five-year average.

LATEST QUOTATIONS.

BURNS CUBOID SUPPORT

"Carries the *MOST* weight on these muscles"

strengthens muscles of feet and ankles. Relieves pressure off bunions, corns, calluses. Get a pair, $2.39. Any J. C. Penny Co. Department Store. Write for booklet.

Because he was so busy at school Wayne Reeder did not have time to write to the Corner any sooner. He says: "We have hauled water on this place ever since I can remember, but we have just finished a nice well." Wayne's papa bought a drill and drilled his own well. Now he is drilling a well for a neighbor. This year the Reeders are planning a nice garden. They live in Washington.

Millie Le Bret lives east of the Columbia river, in northeastern Washington. She says her twin brothers, 3 years old, are learning to box. Millie's pets are a cat and a dog.

Ella Littlejohn, who has been a Corner cousin for over three years, says: "I have not written to you for a long time. We have 10 cows, one little calf and six heifers, two work horses and a pony. We have a cat. His name is Tommy. We have a little kitten, too. It hasn't any name." Ella is 10 years old. Her birthday is July 12. She is in the sixth grade and has 13 classmates. Her home is in the country, in Thurston county, Washington. Ella says she likes it better than the city. She has never lived in the city, but has stayed there at different times.

A new cousin, near Silver Lake, in southwestern Washington, writes: "This is my first letter. My full name is Ernest Verner Wicklund. We have 14 cows, eight heifers, three horses and seven pigs. My birthday is January 1. I am 10 years old." We are glad to hear from Ernest.

Isabelle Redding, a northeastern Washington girl, says her favorite study at school is arithmetic. She is in the fifth grade this year and has two teachers. They are Miss Schelling and Miss Larson. Isabelle will be 11 years old October 9, 1922. She likes The Junior Farmer.

"I am 7 years old," says Margaret Pope. "I have a little sister 2 years old. Her name is Myrtle. My teacher's name is Mrs. Daily. We had 10 days of vacation because so many of us in the schoo were sick." Margaret's home is near the Snake river, in southeastern Washington.

"Arithmetic is hard," writes Paul Keller, who was 9 years old September 27, 1921. Paul says the schoolhouse burned down and he is now going to a temporary schoolhouse. He has a dog named Sox and a cat named Stub. Stub came to the house one day when it was cold and Paul fed him, so Stub decided to stay. He has a stub tail. Paul is a Wasington boy and lives in the Wenatchee valley.

Helen Lasti, a new cousin, writes: "I live on a farm and go to Clover valley school. I am in the fourth grade. I have no brother or sister, but I have two rabbits, two cats and a dog. I am 8 years old and my birthday comes April 7." Helen's home is in Pierce county, Washington.

Helen Marchant tells us about a basketball team which has been organized at school where she goes. There are eight girls in the team and they have great fun playing. Helen is in the eighth grade this year. She is a Washington girl and lives in northwestern Whatcom county.

"I am 11 years of age May 2," says Inez Baiha, a southwestern Washington girl. "I am in the third grade. My teacher's name is Miss Turula. I like her very much. I live on a 40-acre farm which is three-fourths of a mile from town. I have two little pet kittens which are very playful." Inez says because the upstairs of the school building was being fixed and there was so much noise the children were having a two weeks' vacation. This is Inez's first letter and she sends greetings to the cousins.

THURSDAY, March 9—Willie Ottmer, 11 years old; Louise Scheel, 10.

FRIDAY, March 10—Corleen McInroe, 10 years old.

SATURDAY, March 11—Bertha Van Derschelden, 10 years old.

MONDAY, March 13—Violet Bond, 8 years old; Ruth Conrad, 10; Arnold Dunbar, 11.

TUESDAY, March 14—Alvin Cline, 11 years old; Mildred Dicken, 9; Estella Wegner, 11; Clara Wiley, 11.

In each issue a list of the cousins' birthdays for the week will be published. At the close of each letter you write be sure to tell how old you are and when your birthday comes.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Clairinda Fagan, Stella Newhold, Wayne Reeder, Millie LeBret, Ella Littlejohn, Ernest Verner Wicklund, Isabelle Redding, Margaret Pope, Paul Keller, Helen Lasti, Helen Marchant, Inez Baihi, Helen Turner.

Cecilia E. Stuhr, southeastern Washington, says: "Daddy bought us a phonograph and 14 records for Christmas." Cecilia thinks that was a fine Christmas present. Among her other presents were a doll, a pair of gloves, hair ribbons and a book, "The Campfire Girls at Long Lake." Cecilia says she likes to do housework.

On a farm in Grant county, Washington, where Roy Norton and his two brothers and three sisters live, there are 40 head of horses, two cows, a calf, a sheep and a dog. Aunt Nellie thinks the boys and girls in the Norton family surely have a jolly time. Roy says: "We have about two miles to go to school and we ride horseback."

We have a letter from Lillian May Dunning, who lives in southeastern Whitman county, Washington. Lillian wrote us some time ago about having a cast on her leg. She now writes that she has taken the cast off and can walk better than she did before. (Aunt Nellie is very glad you are getting better, Lillian.) Lillian goes to the Chambers school and likes it. She sends love to the cousins.

Preston Palston wants to join the Corner. He was 11 years old November 6, 1921, and is an eastern Washington boy. He says he has been reading the letters in THE FARMER. His pets are a pony, a cat and a dog with nine little puppies. Aunt Nellie thinks puppies are fine little pets. We shall be glad to hear from Preston again.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

INVITATIONS ARE SENT OUT.

Billy Mink had gone off on the Laughing Brook feeling most uncomfortable. Grandfather Frog had watched him go. When Billy Mink was out of sight, Grandfather Frog suddenly smiled to himself. Then he opened his big mouth very wide and laughed and laughed without making a sound.

Pretty soon, Grandfather Frog beckoned to the Merry Little Breezes who were playing on the bank. At once, they stopped teasing the buttercups and daisies and hurried to gather around Grandfather Frog as he sat on his big, green lilypad in the Smiling Pool.

"Churgarum!" said Grandfather Frog. "How would you like a story?" The Merry Little Breezes clapped their hands and danced for joy. "Ever and ever and ever so much! Oh, ever so much, Grandfather Frog!" they all cried together.

"All right, you shall have it, if——" Grandfather Frog mused, and his eyes twinkled.

"If what, Grandfather Frog?" cried one of the Merry Little Breezes, anxiously.

"If you will do a favor for me," replied Grandfather Frog.

"Of course, we will, Grandfather Frog!

Grandfather Frog suddenly smiled to himself.

Of course, we will!" shouted the Merry Little Breezes.

Then Grandfather Frog whispered to the Merry Little Breezes and sent them hurrying over the Green Meadows and through the Green Forest.

One found Happy Jack Squirrel. "Grandfather Frog invites you to be at the Big Hickory Tree by the Smiling Pool at sundown tonight, and he says for you to be ready to climb your fastest," said the Merry Little Breeze.

Happy Jack smiled. "I will be there," said he.

Another Merry Little Breeze hunted until he found Peter Rabbit. "Grandfather Frog invites you to come to the Smiling Pool at sundown and be ready to show how fast you can run," said the Merry Little Breeze.

"I will be there," said Peter Rabbit, with a chuckle.

A third Little Breeze invited Johnny Chuck to come and show how fast he can dig, and a fourth Little Breeze invited Jumper the Hare to come and show how he can jump. The other Merry Little Breezes invited all the rest of the little meadow people and forest folks to be at the Smiling Pool at sundown, and, of course, everybody agreed to come.

All this time, Billy Mink knew nothing of what Grandfather Frog and the Merry Little Breezes were doing. He had boasted that he could anything that any of the others could do, and Grandfather Frog said that he could find some one who could do something that Billy Mink couldn't do, and had called Billy Mink a boaster.

Just now, Billy Mink was waiting for sundown, and feeling very uncomfortable, as he waited. He would have felt more uncomfortable had he known of Grandfather Frog's invitations.

Nature's Mighty Works.

"Little drops of water—little grains of sand,
Make the mighty ocean—and the land."
Little drops of gasoline, and a steady hand
Make an ancient "flivver" go to beat the band.
—J. D.

Or a Package of Gum.

"Well, well, Bill, I haven't seen you for years. Do you know where we can get a drink?" "No." "Well, come in here and have a necktie on me."—Louisville Courier-Journal.

A Written Guarantee Desirable

When one buys a bill of goods, he often likes to have a written guarantee that each article is satisfactory.

Did you ever stop to consider that advertised goods in reality have this very advantage? The written guarantee is the advertisement itself. The manufacturer does not print a statement in an advertisement until he is fully able to back it up.

An oral promise may be forgotten; but a promise printed in black and white, as it is in the advertisement, gives the buyer something definite to go by. The manufacturer simply has to back it up.

This is one of the reasons why it will pay you to read the advertising columns of your state farm paper. You can depend upon the statements you find as being reliable. And remember, our guarantee makes you doubly sure of satisfaction in dealing with advertisers.

When writing them for their catalogues and other free literature, please mention the fact that you saw their advertising in The Washington Farmer.

Seven Essentials

Pure Breeding Makes Big Demands

There are seven essentials to a successful purebred live stock business, says Dean E. J. Iddings of the University of Idaho college of agriculture. They are: First, good live stock; second, conservatism in the prices paid for foundation breeding stock; third, common sense in the matter of pedigrees; fourth, advertising; fifth, judicious feeding and care; sixth, the maintenance of the business on a high plane of integrity, and seventh, the recognition by the breeder that genuine success is more than a matter of dollars and cents.

Discussing the first essential, Dean Iddings laid emphasis upon the fact that a pedigree alone is not sufficient proof of the quality of an animal. The individual himself must be good. Sires must conform to the standards of their breed. A beginner should start not with large numbers of purebreds of uncertain or even of outstanding pedigree, but with a few of good quality. A point frequently underestimated is the value of good foundation females in the beginning of the purebred business. The herds and flocks that have become outstanding in this country are, as a rule, noted because of the high quality of the females as well as of the sires.

Constructive Conservatism.

Regarding the prices that should be paid for purebred animals, Dean Iddings expressed conservative disapproval of the excessive and artificial prices sometimes paid, or claimed to be paid. He declared that the purebred live stock business must be conducted for the benefit not alone of the breeder, but even primarily for that of the general live stock man, as its basic purpose is the improvement of the average grade herd throughout the country. Breeding must be on such a basis that farmers and range men can afford to buy reasonably good bulls to head their herds. "If we set our sights too high we shall discourage expansion," he said. "No extremes in prices are justifiable, but rather we must strive for a conservatism of prices."

The breeder himself in special instances where the possibilities for unusual development are present, can perhaps pay a very high price for a sire or a dam of unquestionably outstanding quality. But such high prices should not be made the basis upon which to fix the prices for the reasonably good breeding stock required by the average producer.

The Pedigree.

There are two extremes in the matter of pedigree. In the one case anything that is a pedigree is acceptable, regardless of the family lines or lack of them that it indicates. In the other case nothing but a pedigree showing the bluest blooded ancestry can be considered. Either point of view, says Dean Iddings, is wrong. There should be real quality in an individual as well as in ancestry in order to give pedigree value, but the matter of family blood lines has been overdone, in his opinion. In 10 generations there would be over 2000 animals in the ancestry of an individual, each exerting some influence. Only in cases where the prepotency of a single animal appearing several generations back was exceptional would it exercise a dominant influence on the present generation individual. Dean Iddings makes it clear that he does not discount the value of blood line breeding, but rather vigorously approves it. The presence, however, of a single individual of a prominent family in a pedigree some generations back may, he feels, be greatly over-played as a factor in determining the quality of the present individual.

Must Become Known.

Those breeders who have been most successful have been those who, in addition to building up and maintaining high-class herds, have some systematic method of letting the public know what they have. An essential to success is skillful selling as well as skillful breeding. This advertising, he said, may be by means of the agricultural press, by means of mingling with farmers and breeders personally, or by any other method that educates the possible buyer to know that there, on a particular farm, such a breed type and strain of animal may be secured.

Special Care Essential.

The purebred of high quality is the result of special processes and special care. Purebred animals can not be given the same kind of care that the ordinary grade will thrive upon, but must be given special attention. The same degree of skill necessary to their development is necessary to their proper maintenance and further improvement.

Honesty an Essential.

Permanence in the business is essential to success, and a high standard of integrity on the part of the breeder is necessary to this permanence. Pedigrees must be absolutely honest. Dates and breeding must be reported to the record associations accurately. Animals must be sold for exactly what they are.

Dean Iddings paid the record associations of the various breeds a high compliment when he declared that, notwithstanding the many opportunities that are present for misrepresentation and error, the general public had learned to depend unquestioningly upon the records of the herd books.

Enthusiasm.

The last essential named by Dean Iddings might have been placed first as well as last. It is that of enthusiasm for the undertaking. The breeder that would succeed must be a creater. He must have visions of what he hopes to attain. He must have an ideal far above that of the acquiring of dollars and cents. He must possess an enthusiasm that knows no defeat.

Pacific County Farm Project

Only half enough eggs to supply the local demand are now produced in Pacific county, and this is one of the conditions which local farmers, through County Agent J. R. Beck and a comprehensive, forward-looking extension program, hope to correct within the next three years. More than 35 project leaders in drainage, farm sewage, dairying, crops, soils, horticulture, poultry, clothing and home management are cooperating with Beck in nine communities—Brooklyn, Frances, Menlo Willapa, South Fork, South Bend, Nasel, Wallicutt and Long Beach. A definite acreage for drainage has been set as a goal, and so on down the list of projects.

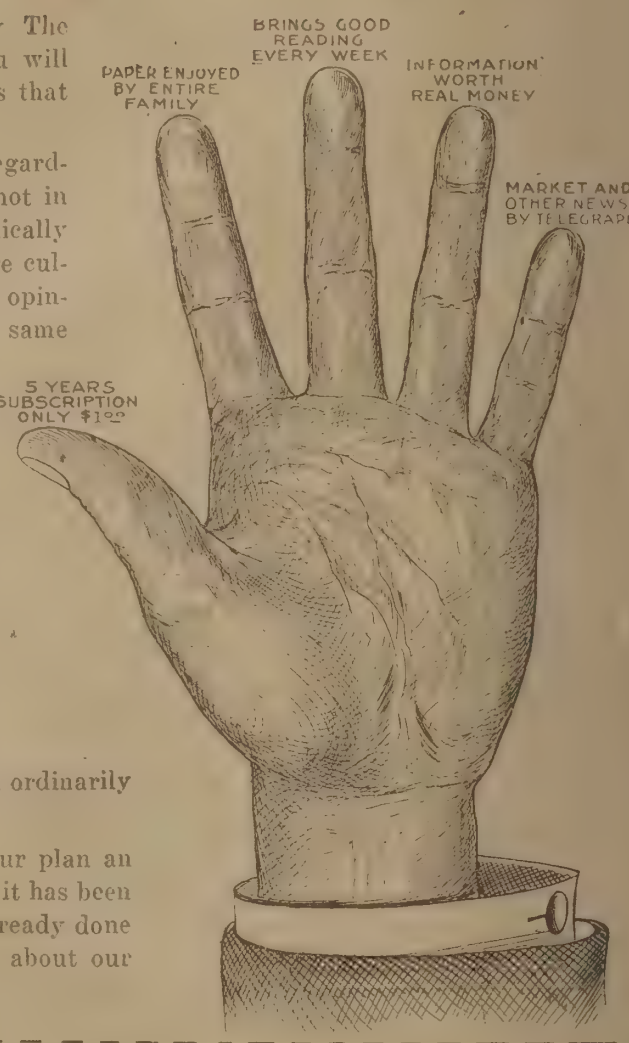
TO BE BRED FOR CLASS AAA.

Valley View Queen of L, a Jersey cow owned by H. S. Ruley of Mount Vernon, Wash., was started on official test November 8. For December she produced 68 pounds of fat and for January 67 pounds. She is being milked only twice a day. She will be run 305 days and bred for class AAA.

Built for Convenience

S. D. Cornell of Grandview, Wash., built a round barn last fall, which seems to be a model of convenience, coupled with a comparatively small cost of construction. The barn is 56 feet in diameter, 16 feet to the eaves and about 40 feet to the top. A silo is built in the center. The roof is self-supporting and three openings provide places in which to blow the silage or put in the hay or grain. A ceiling, well floored above, at the 16-foot level, forms the upper story. The floor is concrete, being about three inches higher in front of the gutter than behind it. The cows are fastened in stanchions, of which there are 19, besides five box stalls and room for four horses. Openings at different points allow of the hay, grain or silage being let through the ceiling, and one can feed the entire herd by walking around the silo.

Many Good Reasons *for* Sending Your Subscription Order Now



If you count over the advantages offered by The Washington Farmer, we are confident that you will agree with a host of others who have written us that they don't want to miss a single issue.

Through this magazine you are kept posted regarding all phases of agricultural life and interests, not in some distant locality, where conditions are radically different, but right in the state whose soil you are cultivating. You benefit from the experiences and opinions of others who are grappling with the very same problems which confront you. In addition you are entertained by well-known fiction writers; instructed by leading agricultural authorities, and kept in touch with market quotations and world events by means of telegraphic dispatches.

All of this wealth of fact, fiction and features comes to you at a low rate on account of our cooperative subscription plan:

We say to our friends: "Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan an even greater success during the coming year than it has been in the past. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

Subscription Rates of The Washington Farmer:

$1 for Five Years 25 Cents for 1 Year. 50 Cents for 3 Years.

In Canada add 1 cent a copy for extra postage.

Mar. 9, 1922. ..... 1922.

News for Breeders

(Continued from page two.)

Hulburt, Mount Vernon, members of the board of directors. This association will join with like associations in other northwestern states in meeting the expenses of A. E. Lawson, field representative of the Shorthorn interests in these states.

SCHOOL BOY'S HERD.

George King, a school boy of Mabton, Wash., has a foundation herd of Poland China hogs that may well make the best breeders sit up and take notice. George has as a herd sire Yakima Pan, bred by Frand D. Winn of Kansas City, by the great boar, Peter Pan, said to be the largest pig ever shown as a year old. He has also two gilts by that other famous boar, Checkers.

George's entry into the swine-breeding game was after getting together $16.25 from the sale of chickens and eggs. With this as a starter, he bought a sow for $50 from C. B. Cox of the same place. He kept strict account of his expenses and sales and did so well his father went into partnership with him and furnished what finances were needed to buy the new and popular foundation stock, for George is a close reader of the swine journals and has a knowledge of pedigrees possessed by only a few men. Mr. King takes both his sons into partnership in hog breeding and other farm operations, and gives the boys a share of the profits.

BUY BOAR FROM NEBRASKA.

John F. Lynn & Son of Peach, Lincoln county, report the purchase of a Poland China boar from Lonergon & Sons of Omaha, Neb. The animal is a March pig weighing 350 pounds, and had been registered as Lynn's Royal Designator. He is sired by Designator, one of the show animals on the Lonergon farm. The Lynn herd will be remembered as the owner of Lynn's Long Joe, who won first in his class at the Western Royal Live Stock show last fall.

Harry Lynn, the junior member of the firm, while just entering his 'teens, is a real live stock breeder and can give the name of any animal in the herd, as well as mention the strong points of each. Soon after the herd was established Harry had made his pick of an outstanding gilt in one of the litters, as a reward for care and management during the fruit harvest. He sent in the record of the litter to the Poland China association, with instructions for his animal to be registered in his own name. Harry now has several of the sows as his own personal property.

John F. Lynn, the father, is operating a 10-acre fruit farm on the banks of the Columbia river in the extreme northern part of the county.

"OLD DUTCH" BACK AGAIN.

Back to service in the northwest after an extended absence in the east comes Dutchland Governor Sir Colantha, a son of Colantha Johanna Lad, formerly used in the Carnation stock farms herd. Through the Carnation manager at Oconomowoc, Wis., Ralph H. Tuttle of Walla Walla, who owns several of the bull's daughters, made an offer for him several months ago. The deal was recently completed and "Old Dutch" now heads the Tuttle herd. He is 11 years of age, but he has 32 A. R. O. daughters.

Pacific Northwest Shorthorn Breeders' Ass'n
ANNUAL SHORTHORN CATTLE SALE
Portland, Oregon (Pacific International Livestock Exposition Building)
Wednesday, March 22, 1922

66 Head **41 Bulls --- 25 Females** **66 Head**

RANGEMEN and FARMERS have a large number of bulls from which to make selections. The 41 bulls include 8 over two years old, 27 yearlings, most of which will be two by summer, and 6 under one year of age. There are several herd bulls in the list and breeders should look them over. From the 25 females listed a man could obtain a valuable foundation herd at his own price. Almost all are young cows or heifers and are well bred.

A number of cattle in the sale are from good milking dams. At prevailing prices of both feed and cattle, now is an opportune time to establish a Shorthorn herd. A good Shorthorn cow bought now will make you a good investment.

The cattle are consigned from some of the leading herds of the Northwest, as A. Chalmers, Frank Brown, G. W. DeLay, W. J. Townley, A. H. Tarbell, Green & Sons, Oregon Agricultural College, Felzer Bros. and others.

REMEMBER: You can buy one or more carloads of bulls in this sale that are ready to go into service.

Get a catalog from— A. E. LAWSON, Sales Manager - 207 Exchange Bank Bldg., Spokane, Wash.

Your Copy is Ready Send for it

NEW MERCHANDISE has been coming in every day and is still coming in by the carload. Our buyer has only just returned from an extensive buying tour of the biggest markets in the United States, with the result that our stocks are complete, new and up to date.

You will be pleasantly surprised with the wonderful values and low prices throughout our new big catalog, which is only made possible by our enormous buying capacity.

We are prepared for a brisk spring trade. Everything points to better times for the farmer. The price of wheat has improved, wool commands more money, sheep have gone up, and canned goods of all kinds are scarce at any figure; so, every indication sems to predict much better prices for nearly everything that the farmer has to sell.

We believe the worst is over; and that from now on the farmer will again be in a position to buy what he needs.

The items below are selected at random from the new catalog. You may order from this page or from the catalog itself. Your copy is ready—write for it, **now!**

THE WASHINGTON FARMER

ESTABLISHED 1894

SPOKANE. SEATTLE.

HAY is one of the great crops of the state of Washington. Sometimes it almost seems too great, for many is the hay grower who has found inadequate sale or inadequate price for his product after a year of costly production. There is an old saying, rich in significance, that faith without works is dead. The statement might well be paraphrased to read that the hay-growing industry, without live stock to consume the product, is useless and hence unprofitable.

The state of Washington is as well qualified for live stock production as it is for hay, and, take it year after year, there is no phase of agriculture more dependable than cattle, sheep, hogs and horses. A conservative development of it tends to improve the general industry of the state. It means more for the hay grower; more for the farmer whose soil needs fertility; more for the breeder; more for the feeder and fitter; more for the man who slaughters and packs; more for the laborer; and more for the general public, whose prosperity is linked up with the prosperity of the farm. Live stock is a basic essential of the essential industry, agriculture.

Read the First Installment of "The Gnant Gray Wolf"—Page 7

What Is Meant by Horse-Power?

PROFESSOR L. J. SMITH, State College of Washington.

Modern farming has reached a stage in its development where horsepower is used for so many purposes that the farmer should have a clear idea of that unit for power. We all know what a pound is when weights are spoken of; also what a foot or a rod means in measuring distances, and we should and can have a definite conception of the unit of power which is called a horsepower. Putting it in a general way, it means doing a certain amount of work in a certain time. The unit was gotten by testing a number of London draft horses to see how much they would pull, on the average, at the traces. It was found after a large number of tests that those horses would pull 150 pounds on the traces and walk at an average rate of 2 1-2 miles per hour, or 220 feet per minute. This amount of work down per minute was arbitrarily taken as the unit of power.

We must now learn what is meant by work. If the reader would hold anything that weighs one pound in his hand he would not be doing work, but if he raises the one pound vertically one foot he does one foot-pound of work. If he raises two pounds of three feet, or three pounds two feet, or one pound six feet, he does six foot-pounds of work. Or, to put it another way, suppose a small boy pulls a loaded cart horizontally along a surface and the pull, or draft, required to keep the cart going is three pounds; if the boy moves the car two feet he does 3 x 2 or six foot-pounds of work.

Now go back to the London draft horse. The pull was 150 pounds and the distance through which the resistance was overcome per minute was 220 feet. The amount of work done per minute was 150 x 220 or 33,000 foot-pounds of work. This 33,000 foot-pounds of work done in one minute is called one horsepower. The ordinary horse will not do this amount of work day after day for 10 hours a day, and keep up weight. They will average around two-thirds of a horsepower, or 22,000 foot-pounds, per minute. On the other hand, a good horse can develop four and up to five horsepower for a short haul of 100 or 200 feet. Usually, however, if the driver overloads the horse continuously it pulls more, but does it correspondingly slower, and so develops no more power.

Let us apply the term in another way. Suppose you want to pump 10 cubic feet of water per minute and raise it 66 feet. How much horsepower would it take? Water weighs 62 1-2 pounds per cubic foot, so 625 pounds of water would be lifted 66 feet, which would take 66 x 625, or 41,200 foot-pounds of work per minute. Divide this by 33,000, and the result is about 1.25 horsepower. This would require, however, at least a two horsepower engine, as the pump would likely not be much more than 60 per cent efficient. In other words, three-fifths of the power would lift the water and two-fifths would be used to overcome the friction of the pump and the water in the pipe.

To get down to gas engines, the ordinary stationary gas engine will not develop much more than its rated power. A three-horsepower engine, therefore, should not ordinarily be required to develop over 2 1-2 horsepower, so it will have a little reserve power. A good make of gas tractor will develop 20 to 25 per cent above its rated power on the belt. When plowing on the level with good footing it will develop 50 to 60 per cent of its rated horsepower, at the draw bar, the rest of the power being required to keep the tractor moving. That is the reason that a tractor has two ratings, as 10-20 horsepower. The 10 means the power at the draw bar, the 20 refers to its belt power rating.

Raising Potatoes

"The selection of the seed bed is the most important part of planting a potato crop," began Clarence Eifrig of Burlington, in his address at the western Washington horticultural convention at Mount Vernon. "No matter what type of soil is used, it is a good plan to use a clover or hay pasture which has been turned under in the fall. It should be worked thoroughly in the spring, and disked crosswise to the furrows.

"As a general rule the rows should be 36 inches apart with hills 14 to 16 inches in the row. The seed can be planted with a hand planter or with a horse-drawn machine. It is much easier to see the rows at the first cultivation when the machine is used.

"Cultivation produces deep root development and keeps out the weeds. Cultivation also keeps the soil in good physical condition. It is a good plan to alternate the cultivator with the drag harrow. The first cultivation should be given as soon as the plants are through the ground, and should be as deep as possible to throw the roots downward. Careless cultivation or cultivating too late nearly always results in a poor yield. All cultivation should stop when the vines are in full bloom."

At this point a question was brought up as to the effect of harrowing the field when the plants are first coming through. Mr. Walsh of Mount Vernon volunteered to answer, giving his own experience. "Harrowing will not hurt the crop," he said, "provided the teeth are set on a slant. It is best to harrow with the rows in order to keep the horses walking between the rows. The plants will all lean one direction for an hour or two after harrowing, but will soon straighten up. Harrowing will injure very few plants but it takes nerve. I am positive that an extra light two-section harrow, drawn by one horse, will pull out less than two per cent of the plants."

In concluding Mr. Eifrig said that a cellar or pit with a temperature of 35 to 40 degrees should be used for storing the potatoes. All light, foul air and excess moisture should be excluded.

ROTATE IN THE ORCHARD.

It is doubtful if continuous cover cropping in the average orchard is good practice. Neither is continuous clean cultivation. These practices should be rotated on many orchard farms.

Strawberry Plants

Bear This Year.

Everbearing and others. Inspected plants, strong and healthy, well packed. Send for prices and book on care of strawberries.

Exide BATTERIES

The First Automobile Starting Battery

Not so long ago all automobiles were cranked by hand. The year 1911 saw the first car regularly furnished with electric starting and lighting equipment. *It had an Exide Battery.* Today more cars leave the factories equipped with the Exide than with any other battery.

Not so long ago farms were lighted by kerosene lamps; and farm work, like churning and pumping, was done by hand. Now, tens of thousands of farm homes have the modern comfort and economy of their own electric light and power plants—and a large majority of such plants get their current from sturdy, long-lasting Exide Batteries.

The entire history of storage batteries in all fields has been little else than a record of Exide accomplishments. Bear this in mind when it becomes necessary to replace the battery in your automobile. The experience built into the Exide, made for your car, means something to you. It means a *long-life battery* of always-dependable power.

That is more than a convenience; it is a genuine economy.

Exide BATTERIES SERVICE STATION

The nearest Exide Service Station has a battery the right size for your car. If your present battery needs repairs, no matter what make it is, it will be repaired skilfully and reasonably. If not in your telephone book, please write us for the address.

THE LONG-LIFE BATTERY FOR YOUR CAR

THE WASHINGTON FARMER

Vol. 46. No. 11 — SUCCESSOR TO THE RANCH PACIFIC DAIRYMAN HORN AND HOOF — March 16, 1922

For Good Farming, Attractive Country Homes and Happy Country People

Cooperation Makes Good in Neighboring State

By GEORGE N. ANGELL

Cooperative marketing of fruit is moving northward. California tried it and succeeded. Oregon is trying it and is succeeding. Several associations are already operating effectively in Washington, and the seed is sown for a yet greater crop of successful cooperative marketing organizations in this state.

Just at this time, when the apple marketing waters of Washington are somewhat troubled, a story of accomplishment from a neighboring state may help produce a calm. Whether you grow apples or prunes, cantaloupes or potatoes, read the accompanying story of the Oregon Cooperative Growers' association.

Having something to wholesale every day in the year is at once a reason for past success and a well-fixed purpose for the future of the Oregon Growers' Cooperative association. "Why pay a sales manager a full year's salary for a few months' work?" replied C. I. Lewis when I asked him to elucidate just what connection this had with successful cooperative marketing. "Why not give him something to do for the entire 12 months? Sales managers are expensive, and you can't turn them off when they're not needed, or some one else will hire them, if they're any good. So we figure on having them 'needed' the year around. For example, take the fresh fruit and vegetable department. Within the next month or six weeks it will be selling broccoli--not as much as it would have been selling if the cold weather had not cut the crop in two, but some broccoli. Soon after that there will be a large tonnage of strawberries, gooseberries, cherries and loganberries to dispose of, mostly to the canneries, and then will come car shipments of cherries, apricots, pears, and still later, apples, in addition to huge local express shipments from The Dalles of peas, cucumbers, eggplant, tomatoes and other vegetables. By the time this is all disposed of the year will be about gone and the fresh fruit salesman will be planning another season. The same way with dried fruits, and eventually we'll have an all-the-year canned goods man. But even for the product of 32,000 acres owned by our 2000 members, we shall never need more than three head salesmen."

The Pack Is Important.

Another thing: The Oregon Growers' association has worked harder on the community pack idea, perhaps, than any other organization in the northwest, and the results of its efforts along this line are beginning to come back. When Mr. Lewis was in the east recently on a trip during which he covered approximately 10,000 miles, visiting dealers in every section of the middle west and south as well as the Atlantic seaboard, he was told repeatedly that the association put out the heaviest and best packed fruit in the northwest, and in more than one market was offered a premium for association products over the best that the trade otherwise afforded. Indeed, there are markets where the excellence of the Oregon product has made it practically impossible to sell anything else.

"The pack is the foundation stone of good marketing," says Lewis, and the education of Oregon growers to the idea of a high standard of excellence he considers in itself a meritorious piece of work. Without this high standard as an integral part of the marketing system the benefits of inspection, no matter how rigid, will never fully be realized. And this inspection, in the Growers' plants, is extremely rigid. Fruit is inspected as it comes in, as it goes over the grading machines and as it is boxed. In the loading room there is another inspection, the boxes being opened at random. And this same care is exercised in the canneries and dried fruit plants as well as in the fresh. Eventually, possibly by next year, the association will market very little fruit that is not machine graded, packed in a community plant and inspected by a man who is not under the manager of that plant. "Standardize your product and put up a pack that can not be excelled for weight and uniformity, and as a rule it will bring more money than even a higher grade of fruit poorly put up."

"All-the-year selling, a standardized product, and a third thing that we have tried to develop is the necessity of wide distribution—extremely wide—for any commodity product of the northwest. Unless you have such distribution, gluts are bound to occur in particular districts, and while there might be years when a glut would be an advantage, nevertheless they must not be permitted. Without the widest possible distribution we can not fortify ourselves against the future. Wide distribution is one form of advertising, and it would be much better for our brand to go into 200 or 300 markets than into only a few. Not only national but foreign outlets are, therefore, sought."

The Selling Department.

No large results can be accomplished without a strong marketing organization, yet the representatives who make up that marketing organization must be picked with care or disaster may be looked for, thinks Mr. Lewis. In a very few markets the association has joint representation with some other agency, usually a cooperative body, but otherwise it has most painstakingly selected its own. "We avoid the speculative broker or jobber who is merely buying a lot of stuff to sell again in three or four months. We know very well that he will turn around and sell against us and, moreover, in any honest effort to get the industry off a speculative basis, which is one of the big objects of this association, we must have representatives who are not in business for speculation. This is the only way it can be accomplished. I doubt if there is a marketing organization in the northwest with a finer lot of representatives than we have. Our varied line is a help in this direction, as is also the reputation for pack, which I have spoken of. As our tonnage grows and our business becomes more valuable it will become increasingly easier to obtain as exclusive representatives the high-class salesmen whom we are after."

The association has direct representation in the chief marketing centers of the middle west, east and south, the same as the Yakima Horticultural union, the Hood River Apple Growers' association or any other large organization. Boston, New York, Chicago, Baltimore, Washington and Cleveland are its largest markets, but it does business also through the southern cities of New Orleans, Atlanta, Memphis and others. Through personal representatives in San Francisco and Los Angeles it satisfies the Californian's liking for red apples, some prunes and a few pears and cherries, and northwest business is handled direct either through the office at Salem or the one at The Dalles. There is a plan under consideration for putting on the association's own traveling representatives in certain areas within a short time to work with its regular representatives, and this will start with two or three in the northwest and several in the middle west and south. This sort of thing runs rapidly into money and requires a large tonnage of sales for support, and northwest shipments so far have been nearly all by express direct, though special men have been engaged, at certain times. Another department that is partly advertising and partly sales effort is the planning or demonstration work by specialists in the handling of dried and canned fruits in some of the principal consuming centers.

For handling its foreign business the association favors direct rather than auction sales, particularly now that the establishment of refrigerated boat service by the Panama canal has made possible the landing of 100,000 boxes or more of northwest apples in one load. This year English representatives of the association are being urged to secure for apples and prunes, for example, the widest possible distribution, even at the sacrifice of price in a great many markets. As previously stated, this is regarded as one form of advertising.

The Pooling System.

The system of pooling in effect in the Oregon Growers' association is somewhat complicated, due to the extent of territory over which it operates and the varying quality of products put out by growers even within a few miles of each other in the same district. The latter factor is being minimized by education, but it still exists. The pooling system is worked first by districts—the Umpqua, Rogue River and Willamette valleys and the district around The Dalles constituting the four divisions. The district pools are divided into separate pools for each variety of fruit, the variety pools into grade and the grade into size, a splitting of fine points which might be considered superfluous by some, but which is held by association officials to be one of the secrets of its strength. The value of the final pool on size can easily be pointed out from the surprising figures on production which the main office has at its command, figures which show the most amazing variation between the number of four and a half to five tier apples of a certain variety in the totals shipped from a particular district. The redivision of the pools makes possible the encouragement of the man who grows good stuff, by paying him for it, a form of encouragement which means boosters for the association and which certain fruit-growing districts in Oregon have seriously needed. Due to the wide variety of products handled there is seldom a time in the association year when all the pools are closed. It takes care of the grower's packing; it often carries him on spray materials, and it handles all of his marketing problems, so that the money it returns to him is net.

The maintenance of relations so intimate with 2000 growers necessitiates an intricate system of accounts and files, and to its system, which has been worked out practically unaided by the men at its head, is attributed a portion at least of its success.

Manager R. C. Paulus is a natural mathematician and accountant, and to his genius along this line, which was highly

(Continued on page twenty-one.)

Skookum Packers Face Big Problem This Week

Not since the formation of the Skookum Packers' association has a meeting of that organization faced a greater issue than that before it at a meeting called for Wenatchee Thursday of this week. In the words of one leader in the organization, "the work of years may be wiped away" at that meeting.

As previously stated in The Washington Farmer, the fruit marketing situation in Washington is in a state of uncertainty as a result of the resignation of the officers of the Northwest Fruit exchange and a movement on the part of the Skookum packers to free themselves from what they consider a growing domination of the fruit marketing of the Pacific northwest by the eastern interests of J. S. Crutchfield of Pittsburgh.

Will the growers' units making up the Skookum Packers' association make good at Thursday's meeting their threat to cancel their contracts with the Skookum packers, thereby taking their fruit out of the hands of the Crutchfield agency, the Northwestern Fruit exchange? That is the momentous issue. If they do complete the cancellation of their contracts, which cancellation has already been begun, through what agency or agencies will they market their 1922 apples?

What Started the Trouble?

The Skookum packers have a five-year contract with the Northwestern Fruit exchange to market all of their apples through it. The contract has four years yet to run. They make no charge of dissatisfaction with past performances of the Northwestern, but they do express great fear as to the wisdom of continued dealings with it. They appear to be convinced that Crutchfield is getting an ever increasingly tight hold on the fruit of the northwest, and that that hold must be broken. They point to the fact that he is the dominant influence in the American Fruit Growers, a large corporation owning much bearing orchard land throughout the United States, including the Congdon apple orchards of the Yakima valley. His marketing agencies are marketing this fruit—marketing it under the widely known Blue Goose trade mark in competition with the widely known Skookum brand fruit of the Skookum Packers, sold at the present time through the Northwestern Fruit exchange, the Crutchfield agency in the Pacific northwest. Will the Blue Goose be given preference over the Indian head of the Skookum trade mark? This is one question, among others, that has been agitating the Skookum Packers.

In a published interview, J. A. Warman, president of the Skookum Packers, says:

"The growers of the Skookum Packers' association are afraid Mr. Crutchfield is seeking a monopoly in the northwestern fruit industry for profit. I don't exactly believe that, although I do believe Mr. Crutchfield is ambitious to dominate the industry, because he has set his heart on a great plan of his own creation.

"The Skookum association has a contract to sell through the Northwestern all the tonnage it has and this contract has four years to run. We are not breaking that contract. The 14 Skookum units, 10 in the Wenatchee district, have one-year contracts with the Skookum association and can always cancel by giving 60 days' notice, prior to May 1. Every unit has filed such notice of cancellation and only one, the Wenatchee unit, has rescinded that action.

"We will deliver to the Northwestern one car of fruit from each unit and no more."

What Mr. Crutchfield Says.

In a formal statement, Mr. Crutchfield, while admitting that the contract between the Northwestern exchange and the Skookum Packers may be cancelled by the latter in case of unsatisfactory results, declares that any attempt to cancel it without proof of dissatisfaction is illegal. He expresses the belief that the grower-members of the Skookum Packers will stand by the contract, saying that a year ago when "two of the executives of the Northwestern Fruit exchange attempted to disrupt the business of the company" the effort was thwarted and the exchange reindorsed by the growers.

Suggestions have been made that appeal will be taken to the courts to enforce the existing contract if attempts are made to void it.

"If contracts entered into in good faith and carried out with satisfaction to both parties concerned are not valid, what might be the far-reaching result in this tremendous industry, which has always been regarded as somewhat hazardous?" asks Mr. Crutchfield. "Such action is impossible by a body of reputable and conservative growers.

"We have full confidence that the growers of the Skookum Packers' association, despite the sensational statements recently given out, will accord the Northwestern Fruit exchange the same fair and friendly treatment as was the case one year ago, when a similar situation arose. We take the position that the growers of the Skookum Packers' association are fully capable of attending to their own business along business lines. We have no desire to inject ourselves into their conventions and deliberations. The attempt of others to do so, in our opinion, will insure their future and permanent elimination."

It is evident at this writing that the members of the local units of the Skookum Packers are uncertain as to their next best move. The waters have been muddied rather than clarified by the controversy of recent weeks.

As previously stated in THE FARMER, all of the leading officers of the Northwestern Fruit exchange, with the exception of Sales Manager Fletcher, recently resigned. The same men almost immediately incorporated a new organizationto be known as the North American Fruit Exchange of the Pacific Coast, with a capitalization of $100,000. Officers of this new corporation are: Reginald H. Parsons, chairman of the board; W. F. Gwin, president; A. R. Rule, vice president; D. H. White, vice president and treasurer; A. A. Prince, secretary and sales manager; J. Curtis Robinson, general traffic manager; Worrall Wilson, counsel.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to [illegible] differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Rural Counties Protest Against Palmer Initiative Measure

As we predicted in a recent issue, the rural counties of Washington are up in protest against the initiatve measure of State Senator E. B. Palmer of Seattle. This is a legislative reapportionment bill, and if the people should be so unwise as to adopt it, would tremendously increase the political grip of Seattle on the rest of the state.

A protesting meeting will be held soon at Olympia, when delegates from all parts of the state will organize a campaign of opposition. Another protesting meeting will be held at Spokane on April 8, and representatives of all parts of eastern Washington—legislators, business organizations, farmers, civic bodies, labor unions and others are invited.

Representative Wolf of Pend Oreille county has written to State Senator Carlyon of Olympia to learn of the west side plans, outside of King county, for fighting the Palmer initiative. "We are opposed to the rest of the state's being the tail for King county," Mr. Wolf declared. "We do not want Washington to have a Cook county, such as Illinois has."

Fred A. Adams of Spokane, former speaker of the house, also declared his strong opposition to the Palmer initiative.

On the west side Representative J. H. Davis of Tacoma and Senator Carlyon of Olympia have declared their opposition to the Seattle scheme. "We beat them in the legislature, and we'll beat them before the people," declared Mr. Davis to a reporter in Tacoma last week. "We have only Seattle to beat, as we have assurances enough to show that the rest of the state will be solidly against the measure."

The Washington Farmer opposed Senator Carlyon's road-bonding bill, but it cordially approves his opposition to the Palmer initiative. "Indifference to legislative reapportionment will pass when the people of other counties consider the legislative power that King county would gain under the Palmer plan," said Senator Carlyon.

At present Seattle and King county have 17.5 per cent of the house membership. If the Palmer initiative measure should be adopted at the polls next November they will have 28.5 per cent of the house membership.

The Seattle scheme of legislative reapportionment would be unfair to the rest of the state and unsound politically. It proposes to base apportionment on the single test of population, when democracies everywhere have found it neeessary in the interests of public welfare to take other tests into consideration, such as the extent of the areas represented, remoteness from the seat of government and approximate balance of representation between the agricultural interests and the great industrial centers.

This principle of legislative apportionment was recognized in the beginning of our federal government, when each state, regardless of population, was given two senators and at least one representative in the house.

Fair-minded political economists realize that if sparsely settled communities are to have any chance against the political weight of great city centers they must be given a representation somewhat in excess of proportionate population. In a big city like Seattle an adroit political boss can manipulate the entire legislative delegation of his county and direct it as a unit against the scattered and unorganized opposition coming from 30 or 35 other counties.

Experience has shown that King county already has a dangerous power in the legislature. The audacious proposal to increase that power from 17.5 to 28.5 per cent is alarming and should be met by vigorous resistance.

Farmers Can Get Information

Dr. S. B. Nelson, director of the state college extension service, in explaining the connection between the extension service and the experiment station to a group of farmers, told how new experiments are put before the people by means of the county agents and the county farm bureaus. The county agent knows whether or not an experiment is applicable to his own county. The proper cooperation of these forces results in more economical production, and eventually better consumption.

Any resident in the state of Washington may obtain without charge information upon agricultural subjects. He can also call at the office of his county agricultural agent and find out what results others have had with a certain crop either in that or in adjoining counties. In addition to this he can meet the extension specialists at different demonstrations given in the county. This last phase of the work is becoming more and more popular, and gives the people an opportunity to see the work properly carried out.

Every farmer has access to at least some of the above advantages. If he has no county agent, he may obtain data direct from the state college. The farmers of the state of Washington are fortunate in having these opportunities at their command, and should not fail to take advantage of them.

Unwise Economy

Attention is called by the state department of agriculture to the fact that the appropriation for the work of eradicating predatory animals under the United States biological survey has been withdrawn. Simultaneously comes the announcement that in certain counties in central-eastern Washington rabies among coyotes is rapidly becoming a menace to the live stock and human inhabitants of those regions.

The recent northwest live stock conference at Spokane took cognizance of this situation and adopted a resolution urging this state's representatives in congress and its senators to work for immediate return of this appropriation.

It is a piece of penny-wise and pound-foolish economy to handicap this excellent service by the withholding of the small appropriation that it requires. The predatory animal hunters under the federal and state direction have done much to rid the state of this menace. Cessation of the work for a short time would result in destroying in large measure the value of the accomplishment of several years' effort. Congress should immediately make it possible for this work to be resumed.

Worth the Extra Trouble

It undoubtedly takes a little more effort to give a purebred animal the care that it deserves than to give a scrub the care that it deserves. Put forth the same effort on the one that you do on the other and the results will almost inevitably be in favor of the purebred. The ability of the purebred to repay extra care on the part of his owner is much greater than is that of the scrub.

State Farm News

Jersey breeders of Grays Harbor county are expected to follow the lead of Holstein breeders there who early in February made arrangements with local bankers to help finance in long-term loans, to the extent of $20,000 if necessary, the purchase and immediate importation of at least 100 head of purebred dairy stock. Representatives of every bank in the county except the one at Oakville met 58 breeders and dairymen at Aberdeen and perfected the arrangement, under which the banks will furnish two-thirds of the money necessary and the farmers the balance.

* * *

About 20 carloads of hops were loaded out of Yakima recently for shipment to England. Robert Livesley was the principal shipper. The hops were contracted many months ago, but under English laws following the World war no hops can be imported into the kingdom till all the English hops are bought. This delays American importations. Mr. Livesley will have 23 cars for shipment.

* * *

The large barn of Hans Nelson, on his farm between Snoqualmie and Fall City, was completely destroyed by fire February 15. Five milch cows, seven head of young steers, three horses and 90 tons of hay were burned. The loss is estimated at $10,000, with only $500 insurance.

* * *

Sixty-seven head of stock and two dogs were burned when the barn on the farm owned by Mrs. John Moore, now occupied by A. Rickard, located a mile south of Everson, Whatcom county, burned shortly before midnight February 16.

The barn was 60x140 feet. The loss will probably total $30,000, partly covered by insurance.

None of the 50 head of cattle were rescued, nor were six hogs, 10 calves, one horse and two dogs that had been closed in the stable for the night.

Tons of hays and hundreds of bushels of grain and feed were also burned.

* * *

Orville Roundtree, formerly boys and girls' club leader in Lewis and subsequently in Grays Harbor county, is now representing the Lewis-Pacific Dairymen's association in the field. The position has been vacant since John Winkler resigned to enter business for himself.

* * *

Professor E. G. Woodward, head of the dairy department of Washington State college and president of the Western Dairy Instructors' association, has resigned to assume the management of a Massachusetts Guernsey breeding establishment owned by Robert Scoville, president of the American Guernsey Cattle club. Woodward has been at Pullman about five years. He is the second faculty member the college has lost to the Guernsey fraternity recently, Karl B. Musser, formerly dairy extension specialist, having enlisted in the extension forces of the American Guernsey Cattle club.

* * *

Storage for this year's crop of potatoes produced by members of the Washington Growers' Packing corporation is assured by the announcement that a warehouse of concrete and hollow tile, 50x100 feet in size and costing not more than $6500, will rise on railroad property adjoining the corporation's prune packing plant. The building will be of one story, with full basement.

* * *

Testing began February 10 in the Lewis County Cow Testing association, which includes 373 cows in Lewis county and a few in Cowlitz. E. A. Donaldson, Holstein breeder of Adna, is president of the association, and A. T. Flagg, formerly county agent and Jersey breeder of Chehalis, is secretary. Carl Taylor (vice president), A. Adolphsen and Chris Hendrichsen are the other members of the board of trustees. Both Lewis and Cowlitz counties have had association testing before, but it was interrupted in both cases by the war.

* * *

Two large areas of logged-off land in Whatcom and Skagit counties are now under consideration by the state department of conservation and development in launching the reforestation movement made possible through the $5000 appropriation of the last legislature. The lands have been found suitable for this purpose, but further investigation is to be carried on, according to Director D. A. Scott of the department, before final selection is made.

* * *

Paving of the Pacific highway between La Center and Woodland will be started as soon as weather conditions permit, the grading having been completed last fall, says a Kelso report.

* * *

The hops held for some time by the Klaber Investment company at its yard at Klaber, 12 miles southwest of Chehalis, recently were sold and are ready for shipment to London. The lot included 438 bales and the price is said to have been 25 cents a pound. The hopyard of the Klaber company for 1922 will contain 135 acres in full bearing. Of this 25 acres is the old yard, while the 110 acres will be 2 years old this season. The company also has five acres of loganberries that will come into good bearing the coming season and another three acres that were set out last spring.

* * *

Don G. Magruder, state dairy specialist, and Leonard Hegenaur, crops and soils specialist, addressed several meetings of farmers in Cowlitz county recently. The meetings were arranged by County Agent Blanton and were held at Mount Solo, Pleasant Hill, Castle Rock, Kalama and Woodland.

* * *

Stanley Millichamp of Wapato shipped a car of onions of the Spanish and Oregon varieties to Spokane recently. They were raised on the Harrah ranch at Harrah.

* * *

Dr. L. Christopherson of Grandview reports the sale of a 13-acre peach orchard in the Grandview orchard tracts at a price of $1000 per acre. The Christopherson orchard has been one of the best producers in the valley.

* * *

Mr. and Mrs. J. R. Vincent of Yakima have purchased a 40-acre fruit farm near Buena. The consideration was $32,632.60. The tract is a part of the Minneapolis Orchard company tracts on the Buena bench.

* * *

W. D. Lancaster of the Zillah district recently received a purebred Guernsey bull, Mambro Lad of Hood View, from Estacada, Ore. The sire of this bull is Red Wing Model's Jolly Lad and his dam is Mambro Hazel of Whitewater. His dam has a record of 13,688.70 pounds of milk in 10 months and 24 days, with a butterfat record in the same time of 535.80 pounds.

FARM BUSINESS AND MARKETS OUTLOOK

Although the margin between thin and fat steers is not a large one, there promises to be a buyer for every steer suitable for the country outlook.

Receipts of lambs and sheep at the 20 leading markets during January and February total 2,188,000 head, compared with 2,465,000 head in the same period a year ago.

Including the entire surplus of Australia and the Argentine, the quantities of wheat available in exporting countries up to July 1 are only about equal to the world's import requirements.

THE MEAT WE EAT.

Pork and lamb consumption in 1921 were at the highest level in five years, while beef consumption was at nearly the lowest point in a similar period, according to a recent report from the department of agriculture. These figures have some bearing on the low prices prevailing in the cattle market and the pronounced strength in hogs and lambs.

Estimated per capita consumption of dressed meat and lard by calendar years, as computed by the department, is as follows:

	1917.	1918.	1919.	1920	1921.
Beef	62.0	64.7	57.2	61.1	57.7
Veal	6.5	7.6	8.2	8.9	8.0
Mutton and lamb	4.7	4.7	5.8	5.0	6.3
Goat	0.2	0.1	0.1	0.1	....
Pork, including lard	58.4	69.8	67.1	68.9	72.8
Total meat	131.8	146.9	138.4	144.0	144.8
Lard	11.7	14.1	12.4	13.1	11.3
Total meat and lard	143.5	161.0	150.8	157.1	156.1

CATTLE PRICES CREEPING UPWARD.

Although the beginning of Lent caused momentary hesitation in the cattle market, dressed beef prices have been maintained or advanced and values on the hoof have followed suit. Net changes have been small in all classes, but prices are creeping upward and average nearly $1.50 higher at present than at the low period in late December.

Cattle prices during the spring usually show distinct seasonal trends. Steer prices customarily advance as the number in feedlots dwindles. This advance in average values is entirely separate and apart from the advance due to the fact that the cattle held until spring have had longer acquaintance with corn as a rule, and are superior in finish to those marketed during midwinter.

Plain light steers generally sell well during the spring because they are scarce at that season and there also is a scarcity of cow beef with which they compete. Feedlots were filled with light steers last fall, however, so that light beef should be abundant this spring. There will be less Texas beef than usual as a partial offset and there is but little frozen beef available from last fall.

Cow and heifer prices, including cutters and canners, advance during the spring months, usually reaching high point in May. Most of the cows and heifers to be disposed of are sold before this date and the demand for stock cattle helps the market for she stuff.

Veal calf receipts begin to decrease by the first or second week in March, reach the high point of the season late in the month or during April, then taper off gradually, but remain above the average until the end of May and sometimes throughout the month of June. The price indicator goes down when receipts increase. The sharp decline during March has already started, as prices broke around $1 last week.

Stockers and feeders almost invariably advance in value during the spring months, when pasturemen everywhere are in the market. Scarcity of light steers at this season also brings competition from slaughterers. Increased purchases on the part of country buyers are already in evidence and values have advanced since January fully as much as the fat cattle market. Although the margin between thin and fat steers is not a large one, there promises to be a buyer for every steer suitable for the country outlet. Graziers from the Mineral Point, Wis., district are beginning to buy and will take about the usual number. Their activity is an important factor in determining values upon fleshy feeders with quality throughout the spring months, both at Chicago and Omaha. In the southwest high prices for cattle and for grass have retarded the Kansas and Oklahoma pasture deal, but from all points of the compass evidence is appearing that stock cattle values will not sag much during the next 60 or 90 days.

PROVISION STOCKS UNUSUALLY LOW.

Stocks of lard at the leading packing points increased only to a negligible degree during February and the total on March 1 was only about half as large as on the same date in 1921. The increase in dry salt meats also was inconsiderable and the increase in pickled meats much less than usual. Stocks of meats at these points at the end of February were only 190,641,000 pounds, compared with 314,337,000 pounds on the same date in 1921. Both lard and dry salt meats have been selling at prices entirely too low to furnish a profit to the packer, which is one reason for the absence of an accumulation. Lard and cured hog meat prices have been advancing recently, however, so that on setbacks the hog markets should run into substantial support on the part of packers who wish to replenish reserves.

Receipts of hogs at the 11 leading markets during January and February were 5,241,000 head, compared with 6,313,000 head in the same interval of 1921. The supply this year was lightest since 1914. Receipts at the leading markets have not expanded, in spite of an advance in values above the $11 level at Chicago. Since light runs are the rule during late March, April and May, it is not believed that buyers will be given the advantage for more than the briefest periods until early in June, when receipts usually increase.

Weakness at eastern markets led to a sharp reduction in purchases by eastern shippers in the last week or 10 days. This factor delayed the progress of the market for a short time, but the small loss has been fully recovered.

HIGH LAMB PRICES HOLD.

Lamb prices suffered a sharp break early last week, due to sentimental causes rather than to any change of consequence in the dressed lamb trade. Damage to the price list was promptly repaired when the supply was shut off. Colorado lambs have been moving freely and it is estimated that one-half of the total has been sold, leaving around 450,000 head still in feeders' hands. The number in corn belt feedlots is believed to be light. Texas lambs and sheep will be much less numerous during April than they usually are, so that the visible supply until the southwestern lamb crop is ready to move is comparatively small.

Receipts of lambs and sheep at the 20 leading markets during January and February total 2,188,000 head, compared with 2,465,000 head in the same period a year ago. The decrease in supply as shown by these figures has been entirely too small to account for all of the advance in values. The general change in the economic outlook has played a major part.

LIGHT HORSE RUNS SUFFICE.

Eastern farm dealers are the principal buyers of horses at the present time and light receipts are sufficient to supply the demand. Farm trade has not reached the volume expected, although it has shown some expansion. City trade is disappointing, except for wagon horses, so that outlets for big drafters are inadequate. The southern trade is unsatisfactory, as only low prices can be obtained. Farm demand should remain on about the present basis and possibly increase slightly during the next five or six weeks, but it is evident that the supply will be adequate to prevent much advance in values. Chunks weighing 1400 to 1600 pounds are quoted at $135 to $165 at Chicago, with 1200 to 1300 pound chunks bringing $90 to $135. Sales above $200 are rare.

WOOL MARKET STILL SHOWS STRENGTH.

Although the wool market has become much more quiet in the last fortnight, it still shows some strength. At the final auction of government wools, held during the last week, prices were steady to 5 per cent higher than at the previous sale early in February. In the west wool growers have raised their asking prices to a level at which dealers are unwilling to take hold. The total quantity contracted for thus far is believed to be less than 20,000,000 pounds.

The woolen goods market is as pessimistic as ever and mills are not quite so active as they were during the last fall.

The department of agriculture has revised its interpretation of wool statistics and has recently called attention to the fact that consumption in most countries is back to a normal basis and that a good deal more wool has been consumed in the last year than was produced during the same period.

WHEAT RESERVES BELOW AVERAGE.

The government reported farm holdings of wheat on March 1 at 131,136,000 bushels. This is substantially below the 10-year average and compares with 217,000,000 bushels last year and 170,000,000 bushels two years ago. Stocks of wheat at mills, in country elevators and at terminal markets, are estimated at about 125,000,000 bushels. Since about 190,000,000 bushels are needed for home use during the next four months, the carry-over on July 1 will be small if exports maintain the volume which current sales to foreign countries now indicate. Last spring a shortage of wheat resulted in an advance of over 50 cents a bushel from the middle of April to the end of May. It is possible that a much more critical shortage will develop this year.

The world's wheat situation is still regarded as very strong. Including the entire surplus of Australia and the Argentine, the quantities available in exporting countries up to July 1 are only about equal to the world's import requirements. If this forecast of the situation proves to be correct there should be a keen demand for wheat from the United States and Canada in the first six months after the harvest of the 1922 crop.

The drought-stricken area in the southwest has had a great deal of snow and rain in the last 10 days, so that the new winter wheat is in position to make some recovery, but the government weather report indicates a poor condition of the crop in a number of states and a crop scare may develop at any time.

The wheat market has had a sharp setback in the last 10 days, due to some extent to profit taking in the speculative markets. Liverpool has been involved, along with the markets in this country, but it is believed that the decline has practically spent its force. European buying has been less urgent recently, as large quantities are afloat from Australia and the Argentine, but moderate quantities of durum and hard winter wheat have been sold abroad recently and Greece has just placed an order for nearly 2,000,000 bushels of Manitobas.

Although foreign buyers have been less active competitors for wheat recently, the domestic flour trade is improving and along with it the milling demand for wheat.

CORN SURPLUS DISAPPEARING.

Farm holdings of corn on March 1, according to the government's estimate, were 1,313,120,000 bushels, compared with 1,564,832,000 bushels on the same date a year ago. Since total stocks of corn on November 1, 1921, were larger than on the same date of 1920, the total disappearance of corn from farms from November 1 last year until March 1 has been the largest ever known. Disappearance of corn is not absolutely equivalent of consumption, however, and a part of the enormous disappearance is accounted for by larger stocks now in the hands of dealers and not included in commercial reports upon supplies. This factor only explains a small part of the increased disappearance, however. Changes in the numbers of various classes of live stock on farms compared with a year ago can hardly account for the enormous apparent farm consumption of corn. Low quality of the crop was not an important factor, either, since the per cent of merchantable corn as reported by the department was 87.5 per cent, compared with 86.9 per cent for the crop of 1920. It appears probable that the crop was slightly overestimated.

The stock of oats on farms was estimated at 404,461,000 bushels, compared with 683,755,000 bushels on March 1, 1921, and 409,730,000 two years ago. The 10-year average is nearly 500,000 bushels. Light farm reserves are partly offset by the enormous visible supply, which is 68,529,000 bushels, compared with 34,210,000 bushels at this time last year.

Primary receipts of oats are decreasing and distribution of oats from primary markets is beginning to increase. These factors should give the oats market a more independent tone than it has shown thus far in the crop year.

CASH GRAIN MARKETS.

The range of cash grain prices for week ending March 8:

CHICAGO—Wheat—No. 2 red, $1.38 1-2@1.40; No. 3, $1.35 1-2@1.38; No. 2 hard, $1.35@1.42 1-2; No. 3, $1.34@1.39.

Corn—No. 2 mixed, 57 1-2@62c; No. 3, 55@60 1-2c; No. 4, 54@59 3-4c; No. 2 yellow, 57 1-2@62 1-2c; No. 3, 55 1-2@61 1-4c; No. 4, 54@60c; No. 2 white, 57 3-4@62c; No. 3, 55 1-2@61 1-4c; No. 4, 54@59 1-2c. Oats—No. 2 white, 39 1-4@42c; No. 3, 36 1-2@40c; No. 4, 34 1-4@37 1-2c. Rye—$1@1.03. Barley—61@71c.

SEED MARKETS SLIGHTLY LOWER.

Seed markets have been easier in the last few days, although red clover seed has retained its advance. Demand for timothy has been disappointing and stocks at distributing markets are liberal. No big decline is likely to occur, especially in clover seed, within the next 30 days.

Toledo, per bushel—Prime red clover, $16.15; prime alsike, $12.30; prime timothy, $3.17 1-2.

FEED MARKETS FIRM.

Although demand for feedstuffs is slow, except for middlings and tankage, which have been aided by the advance in hogs, prices are holding on a high level. The supply of wheat feeds, corn by-products and cottonseed meal appears ample, but stocks of tankage and linseed meal are light.

Prices per ton (100-pound bags), in carlots: Chicago—Bran, $28; standard middlings, $29; flour middlings, $32; cottonseed meal, 36 per cent, $45.50; 43 per cent, $50; hominy feed, $24; gluten feed, $32.65; old process oil meal, $55; tankage, $60.

WEATHER HELPS HAY.

Cold weather and snows over large areas have helped the demand for hay and at the same time have obstructed the movement from surplus sections. Higher prices have been recorded, especially in the northwest. The south is a heavy buyer at this season and the northern and eastern sections are expected to purchase more freely during the next month or two, as supplies of forage are becoming depleted.

PRICES PER TON IN CARLOTS.

CHICAGO—No. 1 timothy, $21@23; No. 2, $18@21; No. 3, $14@17; No. 1 light clover mixed, $20@21; No. 1 clover mixed, $18@19; No. 1 alfalfa, $17@25; upland prairie, $11@15; midland prairie, $10@13; rye straw, $14@15; oat and wheat straw, $10@13.

EGGS GOING INTO STORAGE.

Although there have been numerous upturns, the egg market has been headed downhill during the last three months. Prices are the lowest at this season in a number of years and are practically down to the low point reached in April, 1921, so that the spring slump should be practically at an end. Receipts are increasing and withdrawals from cold storage are beginning to be exceeded by the movement into storage.

BUTTER PRODUCTION ON THE INCREASE.

Butter production is gradually increasing, according to reports to the American Creamery Butter Manufacturers' association. The increase is small, however, and may not become a big factor in the market for another month. Prices recently have been comparatively firm as a result of severe storms in some of the sections of heavy production, which delayed shipments to market. Receipts at the four leading cities during the last week, however, were materially larger than in the corresponding week of 1921. Demand also has increased to some extent, as buyers were disposed to take more than their immediate requirements and a large quantity of butter was removed from cold storage. The undertone of the market is rather nervous, with a prospect of lower prices within the next 30 days, although there may be but little change immediately.

Prices for 92-score fresh butter on March 8 were:

Chicago, 36c; New York, 37 1-2c; Boston, 38c; Philadelphia, 37 1-2c.

CHEESE MARKETS UNSETTLED.

Stormy weather in the principal cheese producing territory prevented shipments. This factor, together with some market manipulation by big buyers, caused a decline in country markets, while on the principal distributing markets supplies were light. Prices were firm at the opening of the week, but later on a nervous, unsettled attitude on the part of dealers developed, so that they moved their stocks as fast as they arrived. Prices were irregular, but became more stable toward the close of the week. The quantity of held cheese available is light and the demand appears adequate to take care of it, although premiums on fresh cheese have declined. Wisconsin cheese has been moving well in the east.

Sunflower Silage for Beef

Tests at Experiment Station Indicate It a Cheap Feed

By JERRY SOTOLA, Animal Husbandry Department, State College of Washington.

The high and increasing price of feed a few years back caused northwestern sheep and cattle men to look for cheaper winter feed. The corn belt cattle and sheep feeders had had the same experience some years prior, and began substituting corn silage for hay. The western live stock men attempted to follow the same plan, but were handicapped by the fact that the climate was not suitable for the production of corn. The early frosts and light rainfall during the growing season made this crop impractical. Many different crops were tried by the farmers and the experiment station. In the sorting out of the more promising crops, sunflowers for a silage crop stood out because of their high yield per acre. The next step was to determine their feeding value.

At the Washington experiment station, Pullman, a good quality of corn silage is produced. However, the yield per acre is only about one-half that of sunflowers, corn producing on the average of six tons per acre. Hence in making comparison of silage, corn is used as a base crop.

At first 10-ton test silos were used. From the analyses of the two silages and from feeding and digestion tests with lambs the sunflower silage appeared to have a feeding value of about 75 per cent of good corn silage. Last season 200 tons of this silage were grown to test its value for the production of beef.

During the 75-day period between December 2, 1921, and February 14, 1922, two fairly uniform lots of grade Shorthorn and Hereford cattle were fed with the view of comparing sunflower and corn silages in roughage rations of steers. Analyses of the two feeds bring out differences in nutrient content as follows:

	Dry Matter	Crude Protein	Crude Fat	Crude Fiber	Nitrogen Free Extract
Corn silage	28.40	1.99	.91	5.94	17.58
Sunflower Silage	22.12	1.72	1.76	6.52	9.96

According to the plan of the experiment, one lot of 13 steers received a ration of cottonseed meal, alfalfa hay and corn silage. The other lot of 12 steers received the same feed except that sunflower silage was fed instead of corn silage. The average daily rations in pounds per head follow:

	Silage	Alfalfa Hay (cut)	Cotton-seed Meal
Corn silage lot	39.6	13.2	2.0
Sunflower silage lot	43.0	12.5	2.1

Both lots had access to salt and water throughout the feeding test. The hay was fed cut and mixed with silage, there being practically no waste. The weather was uniformly cold throughout the feeding period.

The following summary table shows very little difference in gains and feed requirements of steers in the two lots:

	Sunflower Silage	Corn Silage
Length of test (days)	75	75
No. of cattle	12	13
Initial weight (lbs.)	967.2	951.6
Final weight	1057.6	1041.9
Total gain	90.4	90.3
Daily gain	1.2	1.2
Daily ration:		
Silage	43.0	39.6
Alfalfa hay (cut)	12.5	13.2
Cottonseed meal (choice)	2.1	1.2
Feed, per 100 per cent gain:		
Silage	3618.3	3294.6
Alfalfa hay	1033.8	1098.2
Cottonseed meal	177.8	169.9
Total feed (per steer, (75 days):		
Silage	3273.1	2975.0
Alfalfa hay	935.2	991.7
Cottonseed meal	160.7	153.4
Financial statement (per steer):		
Cost at 5c per lb.	$ 45.36	$ 49.58
Total feed cost	13.50	15.97
Necessary selling price at feed lot	61.86	65.55
Necessary selling price per hundred	5.85	6.29

The prices of feeds per ton were as follows: Corn silage, $6; sunflower silage, $4; alfalfa hay, cut, $8; cottonseed meal, $40. Labor, depreciation on equipment and buildings are not included in the financial statement. If the low price of hay could have been anticipated cheaper gains would undoubtedly have been obtained by decreasing the proportion of silage. The sunflower silage, in spite of this, is a cheaper feed and in this instance it has produced cheaper gains.

No difference in condition of the two lots taken collectively could be detected at the close of the test. The tops in both lots (18 head total) were sold at $7.25 per hundredweight at Spokane. The others (seven head) were sold for $6.50 per hundredweight. Including freight charges, the greater moisture content of this feed, on a dry matter basis this difference is minimized. The favorable results with sunflower silage were made possible to a large extent by early frosts in this section in the fall of 1921. This condition forced the corn into the silo before the desired maturity was reached, and in consequence the corn silage was below the average in feeding value.

This experiment is one of a series planned at the Washington experiment station to supply a basis for figuring costs of feeding operations of steers receiving sunflower silage rations.

BUNN HEAD OF BERKSHIRE BREEDERS.

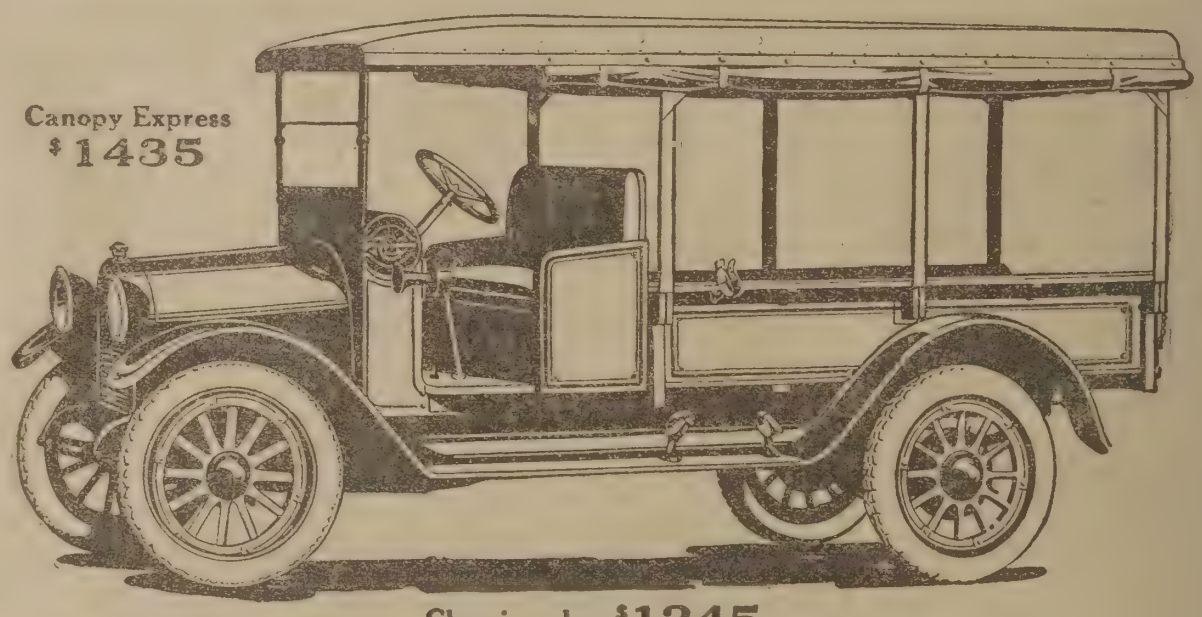
D. C. Bunn of Prosser was elected president of the Washington State Berkshire Breeders' association at the annual meeting in Walla Walla. L. J. Campbell of Walla Walla was named vice president and K. C. Wilcox of Wapato secretary-treasurer.

CLEVELAND PRICE CUT.

The Cleveland Tractor company has announced a reduction in the price of its model F tractor from $795 to 595 f. o. b. Cleveland. This is the fourth tractor concern to announce sharp reductions during recent weeks.

No Time Lost With SAVE-THE-HORSE

A LAME HORSE means money lost in late crops and smaller yield. Thousands of farmers depend entirely on SAVE-THE-HORSE to cure and prevent Ringbone, Thoropin, SPAVIN, and Shoulder, Knee, Ankle, Hoof and Tendon disease. They take no risk whatever. Signed Guarantee assures positive cure while horse is working—or money back.



More than 28 years of unrivaled success testify to its absolute dependability. Write this very day for valuable FREE 96-page Save-the-Horse BOOK telling how to locate, understand and treat lameness of all kinds. This unusual book together with expert veterinary advice costs nothing, yet it's worth real money to you. Send for it and copy of Guarantee—no obligation.

REO SPEED WAGON

Canopy Express $1435

Chassis only—$1245

Experience with more than 60,000 Reo Speed Wagons now in service, proves that the range of adaptability of this wonderful truck covers every class of hauling and delivering where loads vary from 500 to 2500 pounds—"a quarter-ton to a ton-and-a-quarter."

It is equally true that Speed Wagons are better suited to all kinds of carrying on farms ranging from five acres to fifty thousand acres in extent.

Through all the range of agricultural activities—the general farm, and the highly specialized grain, or dairy, stock, or fruit farm—this Speed Wagon runs the gamut of service.

Seems as if its versatility is unlimited. No rival has ever been able to cope with Reo Speed Wagons in all kinds and classes of carrying. They dominate the field regardless of carrying capacities, and do the work quicker, better and cheaper.

Reo Motor Car Company, Lansing, Michigan

CHAPTER I.

Shad Trowbridge.

N a foggy morning of early July in the year 1890, the Labrador mail boat, northward bound from St. Johns, felt her way cautiously into the mist-enveloped harbor of Fort Pelican and to her anchorage.

For six days the little steamer had been buffeted by wind and ice and fog, and when at last her engines ceased to throb and she lay at rest in harbor Allen Shradrach Trowbridge of Boston, her only passenger, felt hugely relieved, for the voyage had been a most unpleasant one, and here he was to disembark.

In June, Allen Shadrach Trowbridge—or "Shad" Trowbridge as the fellows called him, and as we shall call him—had completed his freshman year in college. When college closed he set sail at once for Labrador, where he was to spend his summer holiday canoeing and fishing in the wilderness.

This was the first extended journey Shad Trowbridge had ever made quite alone. For many months he had been planning and preparing for it, and he promised himself it was to be an eventful experience.

He was standing now at the rail, as the ship anchored, peering eagerly through the mist at the group of low, whitewashed buildings which composed Fort Pelican post of the Hudson's Bay company, and at the dim outline of dark forest behind—a clean-cut, square-shouldered, athletic young fellow, who carried his head with the air of one possessing a fair share of self-reliance, and whose square jaw suggested wilfulness if not determination.

The rugged surroundings thrilled him with promise of adventure. The historic post of the old fur traders, the boundless, mysterious forest, and the romantic life of the trappers and dusky tribes which it sheltered, were pregnant with interest.

"A rough-looking country," remarked the steward, joining Shad at the rail.

"It's glorious!" exclaimed Shad enthusiastically. "A real frontier! And back there is a real wilderness!—just the sort of wilderness I've dreamed about getting into all my life."

"The deck of the mail boat's about as near as I want to get to it," said the steward with a deprecatory shrug. "It's land o' hard knocks and short grub. You'd better leave it to the livyeres and Indians, young man, and go back to God's country with the ship."

"No, thank you," said Shad. "I'm going to have a rattling good summer hunting and fishing here before I see the ship again."

"When we come on our next voyage, a fortnight from now, you'll be standing out there on the dock looking for us, and mighty glad to see us," laughed the steward. "You'll have all you want of the Labrador by then. Shall I put your things ashore?"

"Yes, if you please—all but the canoe. I'll paddle that over, if you'll send a man to help me launch it."

"Pooh!" thought Shad, as the steward left him. "'Hard knocks and short grub'! Of course there would be some hard knocks, but he expected that, for he was going to rough it! But with the woods full of game and fish there'd be plenty to eat! He didn't expect any Pullman car jaunt; he could have had that at home. What kind of a fellow did the steward take him for, anyway?

A half-dozen natives on the boat wharf watched Shad curiously as he paddled to a low stretch of beach adjoining the wharf, and two of them strolled down to inspect his canoe when he lifted it out of the water and turned it upon its side at a safe distance above the lapping waves.

"Now she's what I calls a rare fine canoe," observed one, a tall, big-boned, loose-jointed fellow with a straggly red beard, and picturesquely attired in moleskin trousers tucked into the tops of seal-skin boots, a flannel shirt, a short jacket, and the peakless cap of the trapper.

"That she be, Ed, an' a wonderful sight better'n th' bark canoes th' Injuns uses," agreed the other, a powerful, broad-shouldered, deep-chested man, who wore a light-cloth adicky, but whose dress was otherwise similar to that of his companion.

"She have better lines than th' Injun craft," said the one addressed as Ed, eyeing the canoe critically.

"An' she's stancher—a wonderful lot stancher," continued the other.

"She is a pretty good canoe, and a splendid white-water craft," Shad remarked, to break the ice of reserve, and to give the two trappers the opening for conversation for which they were evidently hedging.

"Aye, sir," said the man in the adicky, "they's no doot o' that. Her lines be right, sir. She'd be a fine craft in th's rapids, now—a fine un."

"Be you comin' far, an' be you goin' back wi' th' ship?" asked Ed, unable to restrain his curiosity longer.

"I came from Boston, and if I can get a guide I shall stay for the summer and take a canoe trip into the country," answered Shad.

"I'm thinkin' you can get un in th' shop," suggested Ed.

"Get them in the shop?" asked Shad, in astonishment, not quite certain whether he was misunderstood, or whether the trapper was making game of him. Ed's respectful manner, however, quickly satisfied him that the former was the case.

"Aye," said Ed. "They keeps a wonderful stock o' things in the shop."

"I refer to a man," explained Shad. "I wish to employ a man to go into the country with me to show me about and to assist me."

"'Tis a pilot you wants!" exclaimed Ed, light breaking upon him.

"O' course 'tis a pilot!" broke in the other, with an intonation that suggested scorn of Ed's ignorance. "A pilot an' a guide be th' same thing. A pilot be a guide, an' a guide be a pilot."

"I'd like wonderful well t' pilot you myself, sir, but I couldn't do it nohow," volunteered Ed, in a tone of apology. "You see, I has my nets out, an' I has t' get in firewood for th' wife, t' last she through th' winter whilst I be on th' trail trappin'. An Dick here's fixed th' same. Dick an' me's partners fishin', an' he gives me a hand gettin' out wood, an' I helps he. This be Dick Blake, sir," continued Ed, suddenly remembering that there had been no introduction, "an' I be Ed Matheson."

"I'm glad to make your acquaintance, gentlemen," Shad acknowledged. "My name is Trowbridge. Perhaps you may be able to tell me where I can employ a guide. I would appreciate your assistance."

"Le'me see," Ed meditated. "Now I'm thinkin' Ungava Bob might go," he at length suggested. "He were home th' winter, an' they hauled a rare lot o' wood out wi' th' dogs, an' his father can 'tend th' nets. What d'you think, Dick?"

"Aye, Ungava Bob could sure go, whatever," agreed Dick.

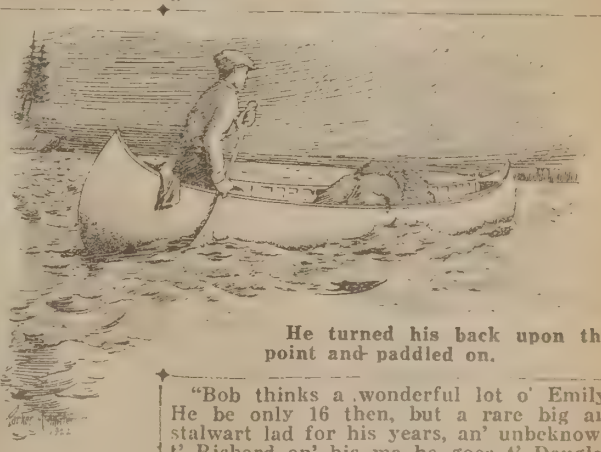
"'Ungava Bob' sounds interesting," said Shad. "How old a man is this Ungava Bob, and is that his real name, or is 'Ungava' a title?"

"He's but a lad—18 years old comin' September—but a rare likely lad—good as a man. Aye, good as a man," declared Ed.

"His real name be Bob Gray," explained Dick, "but we calls him 'Ungava Bob' for a wonderful cruise he were makin' two year ago comin' winter."

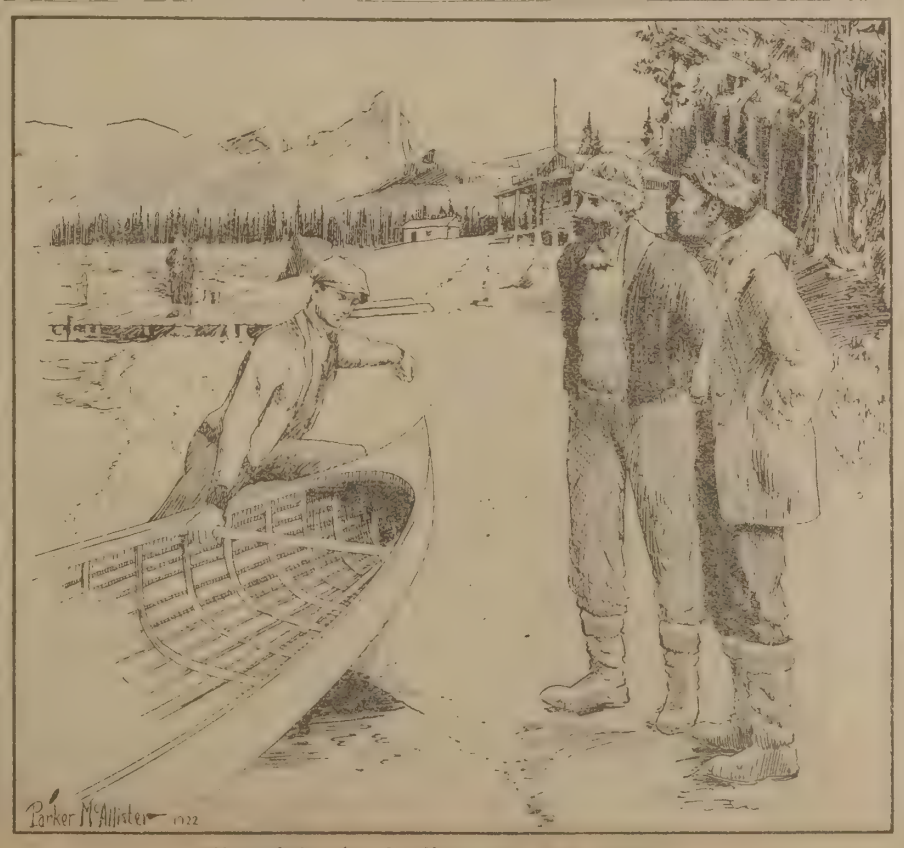
"Seventeen years of age, and already so famous as to have won a title! I'm interested, and I'd like to hear more about him," suggested Shad.

"An' you wants t' hear," said Ed. "But now we be a-standin' an' a-keepin' you, when you wants t' see Mr. Forbes."



"Yes, I wish to see Mr. Forbes, if he is the factor of the post, but you haven't detained me in the least. I can see him presently," reassured Shad.

"Mr. Forbes be wonderful busy till th' ship goes, an' she'll be here for nigh an hour yet," advised Ed.



"Very well, I'll not call on him, then, till the ship goes," decided Shad, "and I'd be glad to hear something of Ungava Bob's travels, in the meantime."

"We might step into th' men's kitchen, where there be seats an' we can talk in comfort," suggested Ed. "This fog be wonderful chillin' standin' still."

"That's a good suggestion," agreed Shad. "The fog is cold." And he followed the two trappers down the long board walk to the men's kitchen.

He turned his back upon the point and paddled on.

"Now she's what I calls a rare fine canoe."

CHAPTER II.

The Lure of the Wilderness.

"Ungava Bob's father's name be Richard Gray," began Ed, while he cut tobacco from a black plug and stuffed it into his pipe, when they were presently seated in the men's kitchen. "Dick's name, here, be Richard, too, but we calls he 'Dick,' and Richard Gray 'Richard,' so's not t' get un mixed up. You see, if we calls un both 'Dick' or both 'Richard,' we'd never be knowin' who 'twas were meant."

"I see," said Shad.

"Well, Richard were havin' a wonderful streak o' bad luck," continued Ed, striking a match and holding it aloft for the sulphur to burn off, "wonderful hard luck. His furrin' fails he two years runnin', an' then th' fishin' fails he, an' his debt wi' th' company gets so big he's two year behind, whatever, th' best he does." Ed paused to apply the match to his pipe.

"Were you ever noticin', Mr. Toobridge——"

"Tumbridge," corrected Dick.

"Be it 'Toobridge' or 'Tumbridge,' sir?" asked Ed, unwilling to accept Dick's correction.

"Trowbridge."

"Leastways Toobridge were nigher right than Tumbridge," declared Ed, looking disdainfully at Dick. "Were you ever noticin' how bad luck, when she strikes a man's trail, follows him like a pack o' hungry wolves? Well, just at th' time I'm speakin' about, Richard's little maid Emily falls off a ledge an' hurts she so she can't walk. They tries all th' cures they knows, but 't weren't no good, an' then they brings Emily here t' Pelican, t' see th' mailboat doctor when th' ship comes.

"Th' mailboat doctor tells un th' only cure is t' take she t' th' hospital in St. Johns, an' so they fetches Smily back t' Wolf Bight, for a trip t' St. Johns takes a wonderful lot o' money, an' Richard ain't got un.

"Bob thinks a wonderful lot o' Emily. He be only 16 then, but a rare big an' stalwart lad for his years, an' unbeknown t' Richard an' his ma he goes t' Douglas Campbell, an' says t' Douglas, an' he lets he work th' Big Hill trail on shares th' winter, he's thinkin' he may ha' th' luck t' trap a silver fox, an' leastways fur t' pay t' send Emily t' th' hospital."

"Who is Douglas Campbell?" asked Shad.

"Oh, every one knows he, an' a rare old man he be. He comes t' th' bay from th' Orkneys nigh 40 year ago, workin' as servant for th' company, an' then leavin th' company t' go trappin'. He done wonderful well, buyin' traps an' openin' new trails, which he lets out on shares. Th' Big Hill trail up th' Grand river were a new one.

"Well, Bob goes in wi' me an' Dick an' Bill Campbell, Douglas' lad, we workin' connectin' trails, an' he done fine. He starts right in catchin' martens an' silver foxes—a wonderful lot for a lad——"

"He only catches one silver, barrin' th' one after he were lost!" broke in Dick. "Now don't go yarnin', Ed."

"Leastways, he gets one silver an' a rare lot o' martens an' otters up t' Christmas, an' a plenty t' send Emily t' th' hospital.

"Then Micmac John—he were a thievin' halfbreed as asks Douglas for th' Big Hill trail, an' feels a grudge ag'in' Bob because Douglas give un t' Bob—Micmac goes in an' steals Bob's tent when Bob were up country after deer. A snow comin' on—'twere wonderful cold—Bob gives out tryin' t' find his tilt, an' falls down, an' loses his senses. When he wakes up he's in a Nascaupee Injun tent, th' Injuns comin' on he where he falls an' takin' he with un.

"Bob not knowin' th' lingo they speaks, an' they not knowin' his lingo, an' he not knowin' how far they took he before he wakes up, or rightly how t' find his tilt, he sticks t' th' Injuns, an' they keeps workin' north till they comes t' Ungava."

"A wonderful trip that were! A wonderful trip! No man in th' bay were ever t' Ungava before, so we calls he 'Ungava Bob.'" interrupted Dick.

"Then Bob works 'cross th' nu'th'ard

(Continued on page twenty.)

Pool Seed Potatoes

T. S. Brown, secretary of the Spokane county farm bureau, announces that bureau members living in the Foothills district have pooled with the bureau 12 carloads of seed potatoes. About 10 carloads of them have passed the first two inspections for seed certification, and no doubt a considerable portion of these will pass the final inspection. The bulk of the potatoes pooled are Netted Gems, with some White Ohios and Earliest-of-Alls. While the growers have agreed on a minimum price for their consignments, all other conditions of the sale are left entirely with the farm bureau management, making it a strictly cooperative pool. Among the growers who have signed up their potatoes are John Hopper, E. W. Johnson, J. A. Lunneborg, Sid Packer, F. L. Dill, Herman Dill, C. H. Barnhart, George Hutlow, F. L. Capell & Son, A. Worthington and H. R. Anderson, all living on R. F. D. 6, out of Hillyard.

The Spokane county farm bureau has been one of the active and successful bureaus in this state in its pooling operations. It has a contract with a wholesale machinery concern whereby it secures machinery for its members at wholesale prices. It handles feed and fuel for its members, and reports saving them considerable money. The bureau has distributed to its members about 40 carloads, or some 1600 tons of coal during the last season, including some anthracite for use by the poultrymen.

Just now much interest is manifest in the dormant oil being purchased by the bureau for use in the war against the leaf roller that has invaded the Spokane valley. About 20 carloads of oil are ordered in one pool from the concern putting it out at Hood River, Ore. This oil is being furnished to farm bureau members and also to the members of other strictly cooperative organizations in the country. Arrangements have also been made for the purchase in large quantities of arsenate of lead for spraying purposes.

All the business of this nature done by the Spokane county farm bureau is on a strictly cash basis. All of the buying, where possible, is done in Spokane county, it being the attitude of the farm bureau that local business concerns should be patronized in every case where satisfactory goods can be secured at satisfactory prices. The bureau does not act in the capacity of a retailer, but gives orders to its members on the house or dealer with which the arrangement has been made. Thus a great deal of overhead expense is eliminated, the benefit accruing to the members of the bureau.

Just Folks

The best thing about necessity is that it does not permit a lot of words and arguments. It demands action right off the bat.

You should make plans and work according to plans, but there is such a thing as overdoing planning. Many years ago I knew a college professor who would take up half as much time in planning a trip downtown as it would take to make the trip. Perhaps this was the reason why he was invariably late at his appointments.

In fact, some of the most effective planning is done on the spur of the moment under that domineering master called necessity.

Planning comes easy when you are planning to do what you want to do; what it is a pleasure for you to do. Planning to get rid of work is more tempting than planning to do work.

Not much worth-while work is done until you get to the point of "root hog or die."

Even ambition finds its greatest stimulus in necessity.

More often than not, it is necessity which compels you to take that next step that separates failure from success.

Self-pampering vanishes before necessity.

Necessity has no regard for sex, color or previous condition of servitude. All nationalities look alike to necessity.

Necessity works both ways. It makes the timid bold and the forward weak. Necessity separates the chaff from the wheat in humans.

Parents may do their children an ill turn by putting off the day of necessity.

The best friends may be those who step aside as necessity approaches.

Decisions and fortitude are wonderfully quickened by necessity.

Hope that is hope conquers necessity. Work that is work is the right-hand of necessity. Purpose that is purpose does not quail before necessity.

Necessity may not be the chief consolation of human life, but there are few consolations superior to it.

Necessity can not do much for passive resignation.

Necessity fails him who accepts it without question.

Must is a bigger word than may any day of the week.

I know a young man today whose whole life is threatened with failure because he has not yet faced necessity. I am convinced that necessity is his only salvation. Purebred necessity resists; scrub necessity yields.

In other words, necessity reflects character.

Necessities are the vitamines of the soul.

It is up to you to clothe necessity. If you fail necessity, necessity will fail you. If you give your utmost to necessity, necessity in turn will give the utmost to you.

EAS

Grow Sweet Peas

Now is the time to plan for your flowers this coming summer. There is no flower which gives more satisfaction the season through than sweet peas. Every one with a strip of ground two feet wide and six feet long may have all the flowers any common home requires for a bouquet the season through.

As soon as the frost is out of the ground so a ditch can be dug is the time to begin. Have as long a row as you can care for, but don't plant any more than you can have time to cut the flowers from every day. If they are not cut every day they will go to seed and you will have only a few and they will be short-stemed and unsatisfactory. From 12 to 15 feet makes a fine bed.

Dig a ditch about 10 inches wide and eight inches deep and put into the bottom of it well-rotted manure, from the cow barn if possible, and wet it down well. Cover the manure three inches deep with earth well pulverized, sow your seed about one-half inch apart and on two sides of a cord which you should stretch from end to end of the ditch as a guide, and about five inches between its rows. Cover lightly with about two and one-half inches of earth.

Some plant only one row instead of the double row, but one can have more flowers with the same care with the double row. Place a post at each end of your row and if the row is long, one in the center, and to these fasten securely common chicken wire. Get the wire up at once so the peas will begin to climb soon as they put out their tendrils. Place the wire low, within two inches of the ground, so the first tendrils will reach it.

To hasten the sprouting, soak our seed over night in warm, not hot, water and keep the ground moist.

Sweet peas should have a good deal of

How to Save in Painting—

Farm Buildings, Machinery, Etc.

REMEMBER first, it is what paint *covers* that you want to save — not merely a few cents per gallon in the purchase price of paint.

Note how the best paint spreads easier and covers more square yards than cheap paint does.

Figure in the *extra gallons* of cheap paint that you must buy, and the extra cost of application.

It means that cheap paint costs just as much as good paint on the house or barn.

The best paint then gives five or more years' protection to your property investment if properly applied. Cheap paint, on the average, starts cracking in twelve months. Which paint costs less?

72 Years Experience

The paints we specify for farm use are the result of 72 years' experience in making paints and varnishes for every purpose. Made to stand the peculiarities of western weather.

The best materials—PURE PIONEER WHITE LEAD, pure linseed oil, zinc and color—are combined with long-time skill, in scientifically exact proportions.

Our white lead base must pass through a silk screen with 40,000 meshes to the square inch. A patented purifier makes it "whiter," so Fuller colors are exceptionally clear. The paint when applied on the house is a beautiful elastic, tough, protective coat.

Such paint costs but a trifle more to buy per gallon and is five or more times more economical in service rendered.

Cheap paints are costly—*in the long run*—good paints *save* money—*they protect.* Remember that when you buy paint. Don't allow surfaces to rot. It costs less to paint them.

Advice on Painting
Free

If you want to do your own work and get the best results, ask our Specification Department for *free advice.*

We'll tell you how to treat old paint, how many coats to use, what kind of brush, etc.

Use *Fuller Service* as well as Fuller Paints and Varnishes to insure good work.

Free Books
Mail the Coupon

Send the coupon for "Save the Surface," a free book that tells why good paint is vitally important on your place—why your house, barn, silo, and machinery should be protected.

We'll send with it our small booklet of Fuller's Specification Farm Paints and Varnishes. You need both books. Send for them now.

Fuller's
SPECIFICATION
Farm Paints
House Paint - Barn & Roof Paint
Wagon Paint - Rubber Cement Floor Paint

M'f'd by W. P. FULLER & CO., San Francisco

Pioneer Manufacturers of Paints, Varnishes, Enamels, Stains and PIONEER WHITE LEAD for 72 Years. Established 1849
Branches in 16 cities in the West—Dealers everywhere

HOUSE PAINT: Fuller's Pure Prepared Paint, Phoenix Pure Paint, for Painting Houses. The purest, best protective and most durable paint manufactured—32 colors.

BARN AND ROOF PAINT: A protective coating for barns, roofs, fences. Dries with a good gloss and wears. Economical in cost and dependable in quality. Six colors to select from.

FLOOR PAINT: Fuller's Rubber Cement Floor paint—sanitary, waterproof and durable paint for floors and kitchens, closets, etc. Attractive in color and gloss. Dries hard overnight. Made in 12 colors.

IMPLEMENT PAINTS: Fuller's Pacific Wagon Paint adapted for repainting agricultural implements, farm wagons, farm machinery, wind mills. A glossy, durable finish offered in 7 colors.

Also makers of All-Purpose Varnishes, Silkenwhite Enamel, Fifteen-for-Floors Varnish, Washable Wall Finish, Auto Enamel, Porch and Step Paint and PIONEER WHITE LEAD.

Early Spring Bee Keeping

Swarming can easily be prevented by giving careful attention to the colonies in the early spring and keeping them busy, according to A. B. Slocum, extension bee specialist of the state college, who recently made a tour of the state giving a series of bee schools. When rearing the new bees the worker broods are produced first and then the drones appear. When the drones begin to show themselves in the hive one should begin to watch the colony to prevent them from swarming. The appearance of the drones is one of the first symptoms of swarming.

The object of swarming is for the bees to make room for the new working force that is coming on. We must take away the swarming instinct by keeping them working and don't allow them to have an extra queen. A small hive is an incentive for bees to swarm. Give them plenty of space to store honey and leave at least three-fourths of an inch between the frames, so they will not crowd.

In a short season, when there is a large amount of brood present and plenty of workers, there is apt to be more swarming. On the other hand, when the weather is wet and the field bees are idle they are more apt to crowd the hives and cause swarming.

Hiving a Swarm.

When a hive has been allowed to become over-crowded and started to swarm they will usually have become clustered around the queen before they are noticed. One of the best ways to quiet a cluster of this kind is to take a garden hose and sprinkle them. Then take a hand net or a gunny-sack and shake them into it and place them in front of the new hive, which has a couple of frames of brood in it. This will attract the bees and they will not leave for another location. If the hive is not right they will swarm out and will be lost.

In some instances when a colony shows a tendency to swarm they can be satisfied by shaking a frame in front of a new hive, thus making them think they have swarmed. Give them a new queen and a good hive and they will start working as though they had swarmed of their own accord. Some beekeepers give the colony plenty of room and cut out the queen cells every 10 days and never allow them to start to swarm.

European Foul Brood.

One can easily tell European foul brood by the small, white lines on the back of each larva. There is also an irregular position of the larva, according to their different age. In fact, it looks more as if they had been thrown in the cells loose instead of hatching the natural way. There is also a darker color of the young when the disease is present.

Although the American foul brood affects the young larvae and the markings appear much the same as is found in the European disease, there are a few characteristics which are different. Sunken cell caps are found which later have a small hole in the center. The dark color also shows in the pupa stage, and in advance stages of the disease the "rope test" is used in locating the trouble.

In the early stages it is easy to tell the healthy cells by their normal arched appearance and their white color. If there are a few of the open cells that show the dark color the "rope test" can be applied by means of a toothpick touched to the dead pupa. If it is American foul brood the substance will adhere to the toothpick with a long, ropy formation, which snaps back when stretched.

The only treatment for either disease is the use of strict sanitation. Never allow diseased honey to lie exposed where the bees can get at it. They will spread the disease very rapidly to the clean hives. It should be placed in a covered receptacle upon removing. When the brood combs have been freed of the disease the bees should be shaken down on paper in front of a clean hive, using smoke if necessary. Care should be taken that all brood combs given to the new hive be absolutely free from the disease.

Honey from a diseased hive can be used for bee feed provided it is boiled well. The presence of foul brood germs will not prevent the honey being used for human consumption. Foul brood honey will not contaminate grown bees so long as they use it for their own nourishment. If, however, they use it for feeding the new brood the young will be affected. The process of digestion in the adult bee seems to completely destroy the germ.

After all of the diseased comb has been removed from the old hive the inside should be thoroughly charred before being used again for a colony. Never shake the supers when the bees are out. It is better to do it after dusk. In this way one is more apt to get all of the bees into the new hive. The colonies should be thoroughly inspected for foul brood at frequent intervals.

Paulhamus Remains President

The advisability of reorganizing the Puyallup and Sumner Fruit Growers' association is to be investigated by a special committee of five members to be appointed by President W. H. Paulhamus. This committee will report at an adjourned meeting of the association to be called within four weeks by President Paulhamus.

Decision to conduct such an investigation was made with the passage of a motion by E. R. Thomas of Sumner at the 22d annual meeting of the association, held in Puyallup.

Mr. Paulhamus predicted a prosperous year for the growers. In view of conditions he said he would consider serving as head of the association another year if the members desired. The growers expressed their approval by raising their hands and cheering.

Boys Serve Lunch

Three boys of Oakville, Grays Harbor county, Orven Williams, Ramond Burnett and Jesse Myers, under the supervision of Miss Clara Vesper, served the hot school lunch for a week in January. The boys prepared the hot dish, served it and washed all the dishes. An average of 68 boys and girls received the lunch each day during the week. The hot school lunch club was organized through the efforts of Miss Mabel Webber, home demonstration agent of Grays Harbor.

BUYS COWS TO MAKE MONEY.

"I haven't made any money since I sold my cows, and I've got to get hold of some more," averred D. J. Kelley of Touchet, and thereupon purchased two head for $595 at the Davis-Butchart dispersal sale. One of them is a yearling daughter of Sir Bessie Fobes Tritomia, out of a 26-pound dam; the other a son of the same sire, out of a daughter of Sir Ormsby Burke Segis. The calf will be a year old March 21. Kelley is the man from whom Butchart Brothers bought their ranch near Sunnyside.

NON-HEADACHE DU PONT NON-FREEZING
PACIFIC
STUMPING POWDER
½ more
$2 = $2.50
Your dynamite dollar – is now worth $1.50

YOU can buy 130 sticks of Pacific Stumping Powder for only 50c more than you pay for 85 sticks of other stumping powders.

"Pacific Stumping," the new Du Pont Farm Dynamite, has approximately the same strength as other standard stumping powders and gives you equal work, stick for stick. Thus Du Pont Engineers have found a way to give you ½ more dynamite for your dollar.

The cost per stick is 2½ cents (or 30%) less than other standard stumping powders. And, in addition, you won't get a "dynamite headache" from using Pacific Stumping and it will not freeze.

Think—this year, with Pacific Stumping, you can clear ½ more acres of stump land at the same cost you paid last year for dynamite, or you can clear the same amount as in 1921, at a saving of approximately 30%.

Let Pacific Stumping help you make 1922 the biggest land clearing year of all. See your local hardware or general store merchant—and mail this coupon *now*.

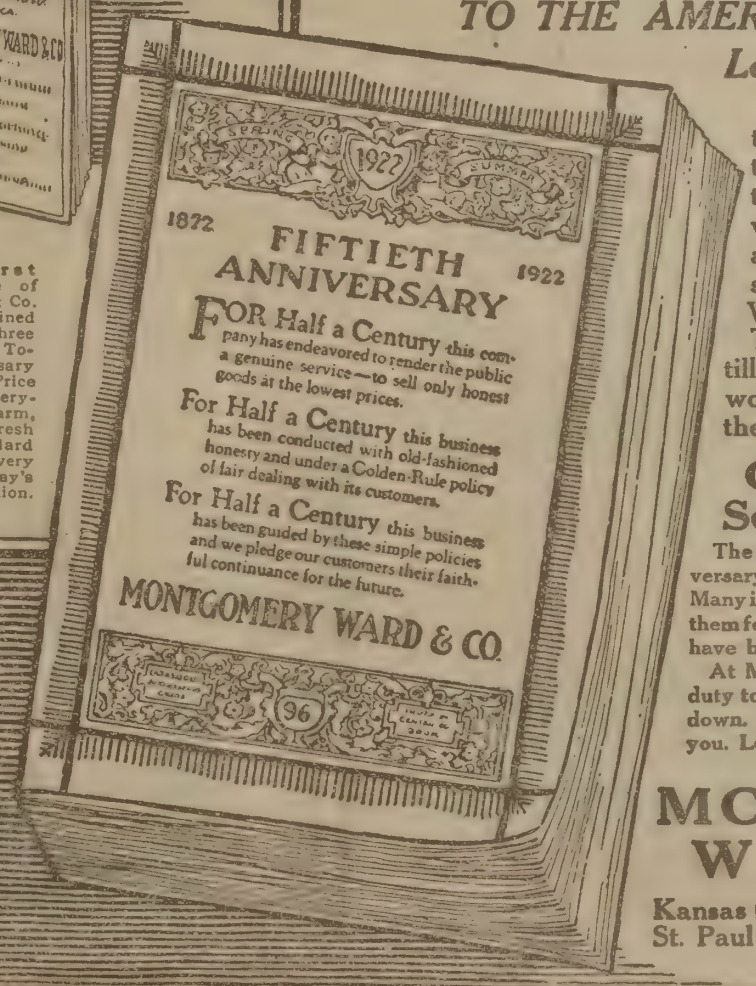
50th Anniversary Montgomery Ward & Co.



MONTGOMERY WARD AND GEORGE R. THORNE

started business under the name of: "Montgomery Ward & Co." in 1872. Mr. Ward had been a clerk in a small town store, with farmers as his customers, farmers as his friends. And so he conceived the idea of helping save the farmer from paying three or four profits by selling him goods direct by mail at one small profit. With a capital of less than $2,000 they issued their first little one-page leaflets, and so began this vast business of Montgomery Ward & Co.

In 1874 the first catalogue of Montgomery Ward & Co. was issued. It contained eight pages, about three by five inches in size. Today this 50th Anniversary Catalogue, this 1922 Price Guide, shows about everything for the Home, Farm, and Family — new, fresh merchandise of standard quality always, with every price based upon today's low costs of production.

If you have a copy of this book, buy from it regularly. It always brings you a saving.

And lend this book to your neighbors. Let your neighbor take advantage of the cash saving it always offers.

The Oldest Mail Order House is Today the *Most Progressive*

FOR FIFTY YEARS the American Farmer and Montgomery Ward & Co. have been helping each other.

For Fifty Years we have worked conscientiously always to offer you a saving. And you, by your appreciation, by your patronage, have built this business, until today we have five million customers.

And there is the proof of the saving and the service Montgomery Ward & Co. have rendered to the public. No business that is not sound can weather the storms of fifty years. No business that does not render a genuine service can win the patronage of five million people.

Our big 50th Anniversary Catalogue, pictured below, adds greatly to the sum of all our past achievement in making low prices. This book is today a Price Guide, sets the low price standard for America, and tells you the right price, the price you should pay for almost everything you buy.

This book shows the new-old spirit of Ward's—progressive, alert, working to give lower prices, to give you bigger and bigger values, and better and still better service—and always under the Banner of the Golden Rule.

TO THE AMERICAN FARMER:

Let Us All Pull Together

We know business conditions on the Farms of America, as well as in the towns and cities. We have customers everywhere. We believe the worst is behind us and we are hopeful and encouraged. But we are all in the same boat. We must all pull together. We are going to do our part with you. This season you will need some new tillage tools to replace those that are worn out. We are going to furnish them without one cent of profit to us.

Our Tillage Tools Sold Without Profit

The prices on Tillage Tools in our 50th Anniversary Catalogue are absolutely no-profit-prices. Many items are priced at less than we can replace them for today. And the prices all through this book have been made to meet present-day conditions.

At Montgomery Ward & Co. we feel we owe a duty to our customers—to help make prices come down. We are in the same business boat with all of you. Let us all pull together. We are doing our part.

LIVESTOCK AND DAIRY

Dairy Questions
Are Answered by A. B. Nystrom

I am feeding my dairy cows grain, 50 pounds of corn, 50 pounds of ground oats, 60 pounds of bran or wheat. Is that a good feed for cows to make milk, and what is good in barley as a milk producing feed? I feed good alfalfa hay.
Yakima, Wash. E. C. C.

You have a splendid grain ration in such a mixture of corn, oats and bran. Barley is used by some to take the place of corn. However, I would not recommend such a change unless the barley is at least $10 per ton cheaper. It has been my experience that when a grain ration is high in barley there is more danger from udder troubles. Adding 25 pounds linseed oil meal to the above mixture will be beneficial.

Is the milk used from a cow that gives bloody milk from one teat, and the cream after 24 hours old is so bitter that no butter can be made from it, fit to give little children to drink? The milk tastes all right. She isn't bred and has been milking for about a year. We think she stepped on this teat and hurt it. The milk is milked out of this teat and thrown away. MRS. C. H. W.
Manette, Wash.

Milk that turns bitter in 24 hours should not be used for food. The one quarter that gives bloody milk should be bathed in hot water and dried carefully twice a day. Rubbing in a little carbolated vaseline after each washing will cause increased circulation and tend to effect a cure. The bitterness may not be caused from this infected teat, but may be the result of advance stage of lactation. We often find that cows that have not been fresh for a year or more give bitter milk, and the cream from such milk is often very hard to churn. Then again, the cause may not be the cow at all. If the milk does not taste bitter when fresh, but appears only after it stands 24 to 36 hours, it may be cause by certain bacteria that get into the milk from the pails, strainers or from the cow's body. Preventing contamination is the only way to control such a fermentation. It may be necessary to boil all milk utensils and strainers every day for a week to control the trouble.

SAN JUAN JERSEY CATTLE CLUB.

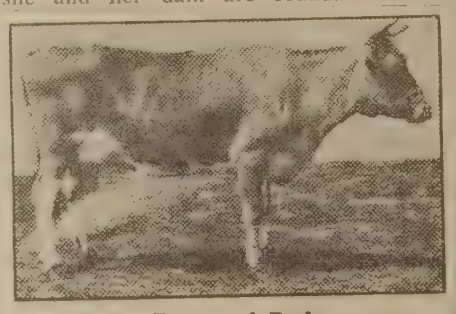
The San Juan County Jersey Cattle club was organized recently at Friday Harbor and the following officers elected: C. J. Sandwith, Friday Harbor, president; Chester R. Martin, Dolphin, vice president; Howard F. Shortley, Orcas, secretary and treasurer; directors, L. H. Richardson, Tom Hemphill, H. Woodworth and Ben E. Harrison.

Jersey breeders taken into the club were: C. J. Sandwith, Shortley Brothers, George S. Wright, A. T. Hemphill, L. J. Bertrand, Howard Shull, F. J. Doyle, John Arend, J. J. Sandwith, C. Van Moorhem, Chester R. Martin, J. W. Stephenson, L. H. Richard, Ben E. Harrison, James Gibson and Woodworth Brothers.

Sunflowers for Silage

By E. G. SCHAFER, Department of Farm Crops, Washington State College.

I would like to know the best variety of sunflower to plant for ensilage, the time and manner of planting, cultivation necessary, time of year it will be ready to cut, stage of plant growth in which to cut. Is there sufficient juice in plant to pack well in silo? What is approximtae yield? Is there much trouble in getting cows to eat it, do they eat it well when accustomed to it, and produce well?
Brinnon, Wash. E. S. H.



The variety of sunflowers used for the principal experimental work at the Washington experiment station is the Mammoth Russian. The crop was planted with an ordinary grain drill by stopping up a portion of the holes. The rows were left about 3½ feet apart and the plants thinned in the row so that there was one plant about every 15 inches. The crop should be planted early in the spring and where corn is grown they may be planted two or three weeks before it is safe to plant corn.

We did not cut the crop until about the time of the first frost or shortly thereafter. The seeds of the best developed heads were fully formed and commencing to harden. The character of the season near the time of maturity has considerable to do with the proper time for cutting. We found that sunflowers had a somewhat lower percentage of dry matter than corn at approximately the same time. There was little difficulty encountered in packing in the silo after the crop was cut.

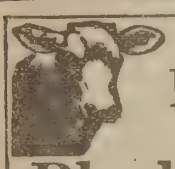
For an average of two years sunflowers produced 11½ tons per acre, while corn produced but six tons per acre. The nutritive value was somewhat less in the sunflowers than in the corn and the silage made from sunflowers was less palatable. From our results we determined that there were approximately 2762 pounds of digestible nutrients in sunflowers from one acre, while one acre of corn contained 2371 pounds.

News for Breeders

That type and production in dairy animals do travel together was again demonstrated when La France of Bralee, second prize winner at the 1921 Pacific International and a show cow from nose to tail, became state champion in Washington in class DD and seventh cow among all Guernseys of this class. La France was bred by E. R. Brady of Satsop, but is owned and was tested in the herd of Dr. A. Macrae Smith of Bellingham, where she and her dam are foundation animals. The record which qualifies her for these honors is one of 594.58 pounds of butterfat from 10,537 pounds of milk at 3½ years. She carried a calf 274 days, freshening December 19, 1921. Woodvale Radium was grand champion Guernsey bull at the Washington state fair in 1920, the same week that La France of Bralee was grand champion female. La France of Bralee is the fourth daughter of Glendale's May King to complete an advanced register record and the second daughter of this sire to qualify for a place among the class leaders.

La France of Bralee.

PUTS COWS ON OFFICIAL TEST.



N. C. Sears of Winlock, Wash., after exhibiting his Jerseys two seasons and making notable winnings, has now begun official testing and it looks as if he would do equally as well in the line of official production as in the show ring. Two cows that he and his partner bought at the L. R. Campbell sale at Chehalis were on test when purchased. One of these, Glen's Pet of J. J., on a 305-day test finished Jan-

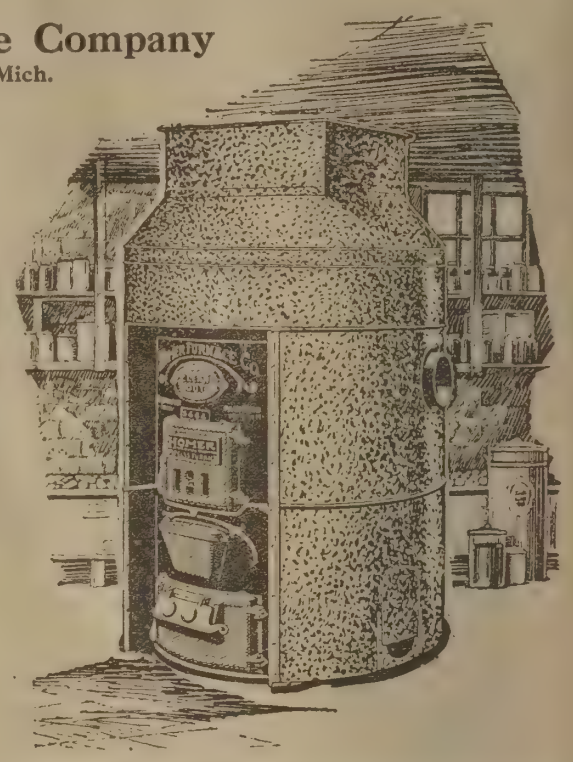
CHOOSE A HOMER BECAUSE

—it is the original patented pipeless furnace, made in one of the largest plants manufacturing pipeless furnaces exclusively.

The Homer has marked advantages you will find in no other furnace, such as the Thermo-Seal Inner Lining, and extra strong, rust-resisting Strokel Iron Castings, which make it last a lifetime.



Choose it because it is sold by Homer dealers, all furnace experts, who will advise you regarding your heating problems, and guarantee to heat every room in your house perfectly.

Let us send you our interesting book, "The History of the Pipeless Furnace," together with the name of your nearest dealer.

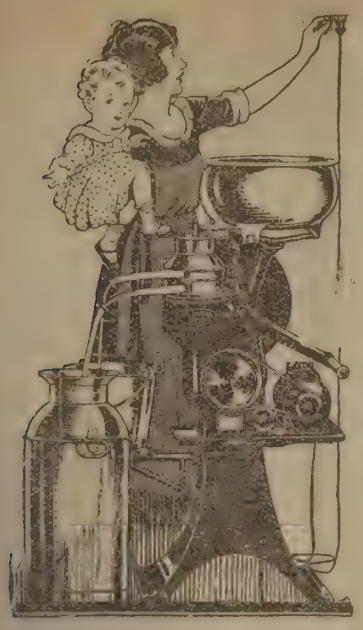
Buhl Cans Are Better

BUHL cans outlast all others. That's because they are made right from heavy quality tinplate in the largest, most complete and most efficient milk can factory in the world.

Another reason for the popularity of Buhl cans is their smoothness and the ease with which they are washed. There are no cracks or corners in which dry particles can stick.

Buhl supplies are standard with dairymen of the Northwest. There is a large variety of styles in milk cans and milk pails from which you may choose. A full range of sizes.



Write for folder showing the complete Buhl line. Order now, when stocks are complete and before the early summer rush begins.

You pay for a De Laval whether you buy one or not

If you are using a worn-out, inferior cream separator, or skimming cream by hand, you are surely wasting enough cream to pay for a De Laval in a short time.

The selection of a cream separator is more important than that of any other machine on the farm, for none other can either save or waste so much, twice a day, 365 days a year.

A De Laval Separator will:

—Skim cleaner for many more years than any other;

—Skim milk clean at lower temperature than any other separator;

—Deliver a higher testing cream, which is more acceptable to the creamery, and easier and less costly to ship,

—And deliver a cream which will make better butter.

Mechanically a De Laval Separator is the best that fine materials and skilled workmanship can make.

—It lasts longer than any other separator, many giving good service for 15 or 20 years.

—It is easier to turn.

—It is easier to clean.

—It is so simple that one tool will set it up or take it down.

—It has the most perfect lubricating system.

Do not be deceived by separators which are claimed to be "just as good and cost less." When you consider its greater savings, greater reliability, longer life, the extra time it saves, and the greater satisfaction it gives, the De Laval is, in the end, by far the most economical cream separator made.

Even if you have only two cows it will pay you to have a Le Laval. One can be bought on such easy terms that it will pay for itself in less than a year. Why not see your De Laval agent at once, or write us for full information?

De Laval Pacific Company

Sooner or later you will use a
De Laval
Cream Separator and Milker

VETERINARY

By DR. S. B. NELSON.

To Cure Warts.—What is the best treatment for warts on cows' teats? I have a Holstein cow that freshened five days after being moved 100 miles by train. She started giving six gallons of milk a day, but soon went down to less than three. I am feeding alfalfa hay with bran and a little barley. Will she come back before her next calf or is she spoiled for good? What is good for chapped or cracked teats? F. G.
Colton, Wash.

For warts on cows' teats I would recommend the following treatment: Chloral hydrate, one and one-half drams; acetic acid absolute, one and one-half drams; salicylic acid, one dram; spirits of ether, one dram; collodion, four drams. Apply night and morning after milking.

I do not think that your cow will come back to her full milk flow at the first. The chances are, however, when she freshens the next time she will probably come back to stay.

Chapped and cracked teats may be overcome by using a little mercuric oxide ointment rubbed well into the teats.

Injured Teat.—I have a cow that got one teat hurt about two weeks ago. It seemed bruised and sore when I milked her. I can not get any milk from that teat now unless I force a milking tube in. A growth or skin forms each time just inside the teat and has to be broken before the tube will go in. A scab forms on the end of the teat. Will it be all right to stop milking her now, as she is giving just a little milk and will be fresh in a month or two? Will there be danger of the teat closing up entirely? C. W. F.
Curlew, Wash.

It is quite possible that you may have trouble with the cow when she comes fresh next month. I think this is a case where you might well use an injection of a 2 per cent solution of boracic acid in sterile water. Be sure that the tube is sterilized thoroughly by boiling before it is inserted into the teat. The teat should be soaked in hot water for a little while, then rubbed dry and dipped into tincture of iodine before the milking tube is inserted. When the udder is distended massage carefully and milk out the contents. I am afraid you will have trouble when the cow freshens if you let this go.

Lice on Horses.—Can you tell me how to get rid of lice on work horses?
Wheeler, Wash. O. D. M'C.

Some warm day wash your horses with a solution of steeped tobacco stems. After the bath blanket them, so that they will not catch cold. Another treatment is to dip a cloth in raw linseed oil and rub over the hair. This is also recommended to destroy lice.

Sheep Won't Eat—We have a sheep that is very poor and she won't eat. We feed her grain and good hay. N. M.
Yakima, Wash.

Try giving your sheep one teaspoonful of compound tincture of gentian in an ounce of water, morning and evening. You can give it to the sheep without choking it if you do not raise the head too high. If you can make the sheep sit on its haunches it makes it rather easy to give the medicine to it.

Cataract—What will remove a cataract on the eye of my collie dog? O. E. W.
Winesap, Wash.

A cataract is an opaque hardening of the lens of the eye. The only remedy is the removal of the lens from the ligaments holding it. Since he will be practically blind after its removal, unless glasses are fitted to him, which is rather impossible, I do not think there is any practical treatment for the trouble.

Feeding Alfalfa.—Does it do any harm to feed alfalfa to horses when it stimulates their kidneys? One neighbor feeds it regularly and his horses are fat, though worked hard. He says it does no harm. I have fed once a day all winter, but my horses are still loose in kidneys.
White Salmon, Wash. B. E. C.

Alfalfa hay is one of the great feeds of the world. In the alfalfa districts horses are fed alfalfa constantly. The only trouble with it is that it is a very high nitrogenous food and for that reason when fed alone is wasteful, but when fed with other hays or feeds, such as timothy hay or straw, is is of great value. Naturally, when you feed too much alfalfa hay the nitrogen salts are likely to stimulate secretion from the kidneys.

Stifle Joint—I have a 3-year-old colt that seems to have hurt its stifle joint. While attempting to break her to work she became frightened and kicked back with both hind legs. Now she has one thick stifle and is not so lame when walking, but very lame when she attempts to run. Is there any cure? A. E. G.
Davenport, Wash.

It is quite possible that the best treatment for your colt would be firing the stifle joint. She should have complete

"Cut the Price" Says Melotte

MELOTTE, the Edison of Europe, manufacturer of the greatest Cream Separator the world has ever known, announces a sweeping reduction in prices.

Labor conditions in general together with tremendous re-building and re-organizing efforts put forth by this big man of Belgium has resulted in cutting production costs to the bone.

And right now *at this particular time*, exchange rates are extremely favorable. Take advantage of this condition while it lasts. Get the most for your American dollar. Buy now and save money!

Before buying any separator find out how the Melotte has won 264 Grand and International prizes and how, for Efficiency of Skimming, Ease of Turning, Convenience of Operation and Durability—the Great Belgium Melotte has won every important European Contest.

Belgium Imported MELOTTE

From Belgium to The Pacific Coast by Water
The increasing demand for Melotte Separators on the Pacific Coast has prompted us to open a Pacific Coast Office to receive direct shipments by water from Belgium. Because of this, farmers and dairymen all over the West now have a wonderful opportunity to save money in the purchase of a Melotte Separator. A Melotte can now be ordered direct from our Pacific Coast Office, which means a saving in time to you of one to two weeks. You are losing money every day you are without it, so send the coupon today to the Pacific Coast Office.

$7.50 after 30 Days Free Trial

We will send an Imported Melotte Cream Separator direct to your farm on a 30 days absolutely Free Trial—no deposits—no papers to sign—use it as if it were your own separator. Compare it—test it in every way.

When you are convinced the Melotte skims cleaner, turns easier, washes quicker, lasts longer than all others, then pay $7.50 as first payment and the balance in small monthly payments until the separator is paid for.

Self-Balancing Bowl The Belgium Melotte is the only single-bearing bowl separator ever made. This patented bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing*. It skims as perfectly after 15 years' use as when new. Positively cannot ever get out of balance—cannot vibrate and thus cause cross currents which waste cream by remixing with the milk. The 600-lb. Melotte turns as easily as the 300-lb. machine of other makes. Spins for 25 minutes unless brake is applied. No other separator has or needs a brake. The Melotte bowl has solved the problem of perfect skimming.

Send This Coupon!

Fill out and mail the coupon for New Melotte catalog containing full description of this wonderful cream separator.

Don't buy any separator until you have found out all about the Melotte, its 15-year guarantee and our 30 Day Free Trial Offer.

Send coupon for full information and also revised price list showing big reductions.

POULTRY AND RABBITS

Health of Birds

Means Dollars to Poultry Keepers

By W. D. BUCHANAN, Poultry Extension Specialist, Washington State College.

The poultry industry in the state of Washington is growing by leaps and bounds. The last decade saw a yearly increase of 127,000 hens. The next decade will see the rate of increase doubled. By 1930 we will have at least 6,000,000 hens. If this vast industry is to be profitable we must look carefully to the essentials of poultry husbandry. In this article I shall deal only with the first, which is health.

Health, which is not only the absence of disease, but the perfect functioning of every organ and member of the body, is the biggest asset in life. It is the thing that all poultrymen must aim to maintain in every bird, and without which he can not succeed. A sick hen is a liability; a weak hen is a candidate for sickness. A condition or method of handling that makes for weakness ends in sickness, and sickness ends in ruin.

In feeding we must look to vigor and health rather than to egg production.

In the past there has been a tendency to feed for eggs and take what vigor we could get; in the future we must feed for health and take what eggs we can get. Ultimately we will get more eggs if we keep this thought in mind and allow ourselves to be guided by it.

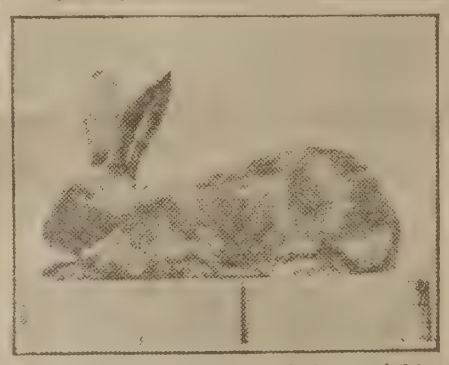
The method of housing has much to do with the health of the birds. They must be kept warm and comfortable in winter if we are to get winter eggs, but if warmth and comfort are secured at the expense of fresh air we are gradually sapping the life and energy of the birds. They may lay a few more eggs for a time, but in the end they will rest or molt or die. Colds and roup are much more likely to result from impure air than from drafts.

Health is even more essential to the breeders than to the laying flock.

A weak pullet may slow up in egg production, but a weak hen, if she lays at all, will produce an egg that fails to hatch for want of strength. Or if it hatches it will die for want of vigor. If it happens to live it will be a low producer or a non-producer and is always a menace to the flock. The weak bird is always the first to catch disease.

Right now we are in the midst of the hatching season. The poultrymen of the state will set approximately 7,000,000 eggs; 3,000,000 of these will fail to hatch. Poor methods of incubation, improper care of eggs and infertile eggs will account for about 1,000,000 of these. The other 2,000,000 will fail to hatch because of a lack of vigor in the parent stock. Here is a loss, directly due to imperfect health, even if we figure eggs at market price, approaching $50,000 a year.

Nor is this all. Out of nearly 4,000,000 chicks hatched we lose almost 1,000,000. One-half of these were doomed to die before the egg was laid. They were born to die, "even as the smoke flieth upward." No amount of care and attention could save them. The drain on the poultrymen of the state amounts to $100,000 a year. It can be saved by building up the health and vigor of the parent stock.



There is an impression among some people that high egg production is associated with a lack of vigor. It is not. A poor, weak hen never laid 300 eggs and she never will. A high producer is always a vigorous hen, a perfectly healthy hen. She may be pushed over the top, of course, and her health ruined by a too great desire to get a few more eggs. But at the beginning she had perfect health, and this health may be conserved and maintained over a number of years. Hen No. 224 at the western Washington experiment station laid 1043 eggs in five years. She laid 306 in her pullet year and 271 in her second year. There was no diminishing of vigor here. Hen No. 88 laid 365 eggs in her first year of 16 months. If she had been weak she would have quit in 10 months.

It is understood, of course, that health alone will not insure high egg production. A hen may be in perfect health and not lay many eggs, but if she is bred to lay and her mother and grandmother and the sires back of them have been kept in perfect health she will not only lay lots of eggs, but she will lay eggs that have hatching power. She is the hen that lays the golden eggs, a thing of beauty, a joy forever and the maker of a perfect food.

Belgian Hare

The Belgian hare was quite generally known in the northern part of continental Europe before the attention of English fanciers was directed to it. As their first stock came from Belgum, that country was credited with having originated the breed which was exploited in England and elsewhere as being a cross between the rabbit and the wild hare. This claim seems to have been fully disproved by many unsuccessful efforts to produce the same cross. The chief known reason for calling the animal a hare lies in its color resemblance to the wild hare.

In the hands of English fanciers, the Belgian hare was greatly improved, and it is still a popular breed with them. The animal was introduced into America over 20 years ago and for a time became a great craze, the finest show animals demanding enormous prices. In spite of the setback caused by the collapse of the boom, the breed has maintained a great popularity. The Flemish Giant, owning to its greater size is preferred by some.

Blue Flemish Giant rabbit, weighing 12 1-4 pounds when five months old.

The Belgian hare weighs more than most breeds of rabbits and is noted for the quality of its meat.

The Flemish Giant is a Belgian hare bred exclusively for large size, but its meat is declared coarser and less delicate in flavor.

It should be remembered, however, that much of the excellence of the rabbit as food depends upon its cooking and especial requirement in cooking the Belgian hare is that none of the natural juices of the meat be lost in the process.

MAKE OLD BIDDY WORK.

Feed activity into the hen by making her work for what she gets. Fowls should have all the feed they can take at the last feeding of the day. Make them scratch for their grain in a straw litter. The ration of itself may be as nearly perfect as it is possible to make it, but results unsatisfactory because it is not fed in the right way or in the right quantity or at the right time.

LEE'S LICE KILLER

Kills lice, mites, bed bugs, etc., affecting poultry. Spray or paint on roosts, etc. Gets body lice on chickens, too. Works while they sleep. No dusting, dipping, greasing or handling. Saves lot of unpleasant work. At most towns, at stores handling Lee Poultry Supplies. Write for information and FREE Book.

Stop Hatching Weak Chicks

with cheap incubators. Remember, it is not how many you hatch that counts but how many you raise.

Chicks that hatch a few days mean out weak and wobbly, and live but nothing to you but trouble and loss.

Queen Incubators

produce large hatches of strong, vigorous chicks that live and grow. The Queen is accurately regulated—taking care automatically without attention of a variation in temperature of 70 degrees without danger to the eggs. It is built of genuine Redwood—very scarce in these days of imitation. Redwood does not absorb the odor from hatching chicks. Cheaper woods and strawboard or composition lining in iron or tin machines, retain the odors, to weaken and kill the chicks of later hatches.

Queen Incubators and Brooders are sold by dealers everywhere. Send for Free Book. (42)

ORCHARD AND GARDEN

Destroy Maggots

In the Gooseberries and Currants

By A. L. MELANDER, Entomologist, Washington State College.

What can I do to be rid of the maggot that bores the gooseberries and currants?
Addy, Wash. MRS. C. J. B.

Two species of small flies, one yellow, the other red, are responsible for the fruit of currant and gooseberry bushes becoming wormy. The fly appears shortly after the fruit has set and with its sharp tail-piece pierces through the skin of the young fruit and injects an egg. From this egg the maggot develops, often causing the fruit to ripen prematurely. At this time, when the maggots are fully grown, they work out and drop to the ground, where they change to a brown, seed-like stage, resembling a grain of wheat, and in this condition pass the winter.

From the nature of the attack it is impossible to destroy the maggots within the fruit by using a contact spray. Repellent sprays to keep the egg-laying flies away have not proved successful. The most promising spray treatment is a sweetened poison applied in drops to the foliage, beginning when all the gooseberries and most of the currants have set. At this time there is little danger of poisoning honey bees. The purpose of this spray is to attract and destroy the flies before they lay many eggs. Three or four light sprinklings of the poison should be applied, at intervals of about two weeks, and repeated in case of rain. The following formula may be used:

Sodium arsenite (poison)	1 ounce
Dissolved in boiling water	1 quart
Molasses	2 quarts
Water	1 gallon

This spray wil probably injure the foliage, but if judiciously applied should not be serious. Grass, fenceposts and near by shady places where the parent flies live should also be treated.

If the entire crop were stripped from the bushes early before the maggots escape, a clean crop for the next year would be almost assured. When sorted over the fruit could be used for jellies or preserves and the presence of some worms would not impair the quality of the product. As it is, a good many worms in currants are unconsciously used by every housewife. On the other hand, if the picking of the fruit be delayed as long as possible the maggots will have escaped and practically all the fruit remaining on the bushes will be free from the pest, although possibly overripe.

Many treatments have been suggested to reach the insects in the soil. A light cultivation of the soil during the late fall will tend to injure some of the worms in the ground and will be a slight help toward protecting next year's crop. However, since these plants have very shallow roots, care must be taken not to injure the root system of the bushes. Chickens do considerable good if allowed to scratch out the worms at the base of the plants after the fruit is picked, or very early in the spring, but they should not be allowed to scratch large enough holes so as to expose the roots. Removal of about three inches of the soil from under the plants would be of value, if the infested soil were scattered out on a road to destroy the worms. The removed soil should be replaced by fresh earth. Chemical treatment of the soil under the plants has not proved satisfactory.

About the Orchard

By ANTHONY SPULER, Department of Entomology, Washington State College.

Will arsenate of lead that falls on grass or grain around apple trees, from spray, kill chickens? D. O. J.
Valleyford, Wash.

Unless the spraying of fruit trees is overdone there should be but little danger of poisoning chickens. Under ordinary spraying practices but little of the spray collects on the ground or cover crop beneath the tree. Of course, where the spraying is overdone, enough might collect on the ground in pools where the chickens will drink it. If this heavy spraying is necessary, I would suggest that you lock up the chickens for a half hour or so, allowing the spray to dry.

Home-Made Tobacco Spray.

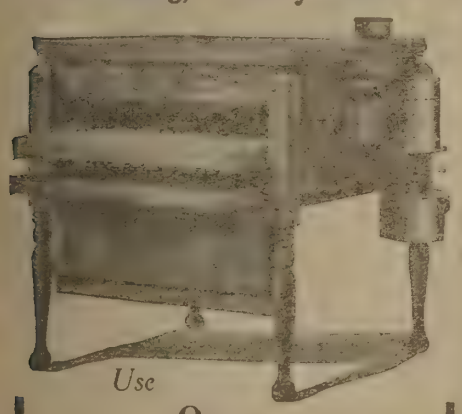
We would like to know if we buy tobacco from growers in Kentucky could we make our spray that would be as effective as the black leaf 40? About how many pounds of tobacco per gallon of spray? Do you think it would be better to boil the tobacco or just let it soak? This orchard has not been given the attention for aphis in the past, but we will do all we can to kill them off. What kind of soap is the best, whale oil soap or Fels Naptha? How many pounds of tobacco should be used to a gallon of spray? A. H.
White Salmon, Wash.

Tobacco decoctions may be prepared at home and, although varying somewhat in strength, will give a satisfactory result unless used too weak. I am afraid that by purchasing the tobacco from the growers you will have difficulty in determining the amount of nicotine that is present. The Virginia agricultural experiment station has found that various tobaccos vary greatly in the amount of nicotine that they contain. It was found that it requires all the way from 10 pounds of tobacco to 121 pounds to produce enough nicotine to make a spray of 100 gallons, containing 0.06 per cent nicotine.

The best way of preparing nicotine from tobacco is to soak the tobacco in water for some time. The tobacco should never be boiled, since nicotine is very volatile and would escape into the air if boiled.

You will find that any cheap grade of soap will answer quite well for spraying purposes.

Canaries Infested With Mites.



I have a couple of canary birds who are afflicted with little red lice or mites. Can you give me a cure for same? The birds are good singers, but since these lice appeared they seem sick. H. H.
Colfax, Wash.

Where canary birds are infested with mites it is best to remove these birds temporarily from the cages and give the cage a thorough cleaning. The mites normally leave the birds during the day and are found secreted in crevices on the perch or in other places about the cage. Dipping the cage into boiling water will destroy all of the mites, which ordinarily return to the bird at night to feed. Dusting the bird with sulphur of pyrethrum powder will also give some results. Some housewives have allowed the bird to rid itself of the mites. This is done by placing a greased dish underneath the perch where the birds roost at night. This to catch mites picked off by the bird during the night. The cage is then covered with a flannel cloth. This cloth answers a double purpose in that it reduces the light and prevents the bird from leaving the perch too early in the morning and also in providing a hiding place for the mites where they can easily be destroyed. Where this operation is repeated for a few nights the bird will be found to be quite free from mites.

TOO MUCH HUMUS.

Too much humus in orchard soil may be almost as bad for the crop as too little. There is a medium ground that is best.

For Big Hatches
of Strong, Healthy Chicks

Good Seeds for Good Crops!

A WELL-FED plant resists disease.

Potatoes, Truck Crops, Tobacco, and Sugar Beets are often attacked by diseases that thrive on ill-fed plants.

The effects produced on these crops by Potash hunger have often been mistaken for a new disease.

Fertilizers for these crops should be well balanced and should contain from 7 to 10 per cent. of Potash.

You can get plenty of Potash if you insist on having it.

BLUE FLAME
Wickless
Oil Heated Colony Hover *J. W. Myers, Pres.*

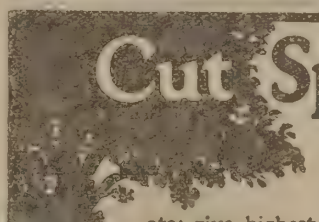
AN INVENTION of our President, thoroughly covered by letters patent. The most practical heating and brooding device known to the poultry fraternity. Our 1922 model **Wickless and Valveless Oil Heated Colony Hover** embraces all the latest and best known improvements in hover construction. From the very beginning it has been the best. It is still far ahead in the front rank. We make sure that every one is right before they leave the factory. Every burner is tested and adjusted to the maximum flame. It will not overflow. It is impossible to clog and slow down the oil flow—it burns until you turn it out.

It Is Dependable—"Reliable Because Right"

Burns ordinary kerosene or coal oil with a clear, blue flame; absolutely no fumes; no soot; no odor; no wicks to trim; no smoke. It gives a pure, clean heat necessary for the comfort and health of chicks beneath the canopy, regardless of outside weather conditions. It is easily regulated. Automatically controlled. Insures the raising of chicks with least work and care at the lowest cost.

Hovers are built of galvanized steel. Shipped completely assembled, ready to bolt the legs to the canopy. Place the heater where wanted, fill with oil, adjust burner to the heat required, and it is ready to start and will continue to go, with little cost, in fact, a great saving in fuel, as long as you want it.

Our money-back guarantee completely covers your purchase, either through our dealers, or direct from us.



Write for literature, poultry guide and sales book, thoroughly descriptive of our Reliable Line.

All Reliable Incubators, Brooders, Hovers, Poultry Appliances and Equipment made at our factory are guaranteed to give absolute satisfaction. We are prize winners throughout the world.

VETERINARY

(Continued from page thirteen.)

rest on it. I would suggest that you invite your veterinarian to make a careful examination of the stifle and see if the suggested operation is not indicated.

Bloody Milk.—I have a fresh cow that gives blood out of one teat. The other three teats are all right. H. F. G.
Waterville, Wash.

Give your cow a teaspoonful of hyposulphate of soda in a pint of water daily for some time.

Sow Is Sick.—I have a sow 1 1-2 years old that has 11 pigs 5 weeks old. She has not been able to get up for 10 days. Her hind legs want to cross and she seems to be sore. I have just weaned the pigs. She has been fed on chopped wheat and a few table scraps, but does not want to eat much. H. E.
Penawawa, Wash.

Since you weaned the pigs from the sow and they will not get the milk, try giving the sow five grains of nux vomica in feed night and morning. I would also recommend daily massage across the loins.

Warts.—How can I remove a wart about as big as a medium-sized potato and several small ones around it from the side of the neck of a yearling heifer, and what is the cause of it? My cows seem to have a scale along the root of the tail and the hair comes off entirely. H. M.
Joyce, Wash.

The cause of these warts is probably a malnutrition. The chances are when you remove these five or six which she now has others will grow. The best way to remove them is to cut them off with a very dull pair of scissors and then apply a little tannic acid to the stump daily. A half ounce of Fowler's solution of arsenic given to the animal once daily may be of value to overcome the malnutrition. Regarding the scale along the root of the tail, I would suggest the application of carbolized petrolatum daily.

Fistula.—A 7-year-old mare of mine got a large boil on the top of her shoulders a year ago and we opened it and a large quantity of puss came out. It soon started to heal and when quite nicely healed it broke open again. The veterinarian said it was fistula and the only way to heal it was an expensive operation. F. W. S.
LaCrosse, Wash.

Generally an operation is the best thing for securing recovery from a fistula. However, the trouble is often bettered by the use of injections of biologic remedies like bacteriums, etc. Oftentimes an economical way of having your animal treated in case of this kind is to send her to the veterinary hospital at Pullman.

Give Yohimbin.—I have two heifers, one freshened in June and the other in November. Neither one has been in heat since. C. H. S.
Winlock, Wash.

Try giving your heifers three-fourths of a grain of yohimbin once daily or every other day for a few days.

Eye Is Sore.—I have a ewe that has one eye bothering her. The lower part of the eye ball is white and matter runs down from the eye. She keeps it partly closed most of the time. I have a lamb affected the same way. H. O. W.
Centerville, Wash.

I do not know just what the trouble is affecting the eyes of the ewe and lamb. Pull down the eyelid of the ewe and see if there is a foreign object on the eyeball of if it has been injured by straw or some other object. If there is a foreign object there, remove it carefully, then put a few drops of a 2 per cent solution of argyrol into the eye night and morning for a few days.

Sick Cats.—What is the matter with my cats. They have a cough and foam runs out of their mouths and their eyes water. It seems to be contagious. They do not have any appeite and are stiff.
Colfax, Wash. W. R. C.

The chances are that your cats are affected with stomach worms. Try the following treatment for them: Olei chenopodii, 16 drops; olei terebinthinae, 2 drops; oil of anisi, 16 drops; olei ricini, 3 1-2 drams; olei olivae, 3 drams. Mix and heat very gently. Give the cats one teaspoonful in a little milk and repeat in an hour. If necessary, repeat in four or five days.

Infected Udder.—Three weeks ago my cow's udder swelled up and the milk had a terrible odor. She quit eating and is giving only a little milk and it is thick.
Ellensburg, Wash. S. J. F.

It is quite likely that your cow has infectious catarrhal mastitis. It is suggested that you wash the udder out with a 2 per cent solution of boracic acid in boiled water. Sterilize the injecting instrument thoroughly by boiling or washing it with a 10 per cent solution of carbolic acid, then wash off in boiling water. Dip the end of the teat in tincture of iodine before inserting the injecting tube. Fill the quarter with a solution; holding the teat closed, massage gently but firmly, then milk it out. Later wash the entire udder and flank with a 2 per cent solution of lysol. Clean out all the bedding and disinfect the stall thoroughly with a saturated solution of copper sulphate, used hot. It will be well if you would do this to the two stalls on either side of the cow, also the gutter and the space behind the gutter.

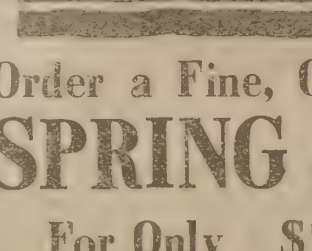
Cystic Ovary.—I have a cow, 5 years old, that I seem unable to get with calf. It is two years since she dropped her last calf.
Amber, Wash. A. H.

There are three or four conditions that will cause the trouble you mention and a cystic ovary is the chief trouble. Some time when you have a veterinarian in your neighborhood have him examine the animal to ascertain the definite trouble and then he can give you advice.

Rubs Hair Off.—I have a mare that has rubbed the hair off her tail and mane and neck. She is in good condition, eats and drinks well. I am feeding oat hay.
Omak, Wash. E. T.

Wash the affected part with a 1 to 1000 solution of corrosive sublimate in water once daily for some time. This is very poisonous. Keep it where children and animals can not get at it.

Warts or Wens.—I have a 2-year-old heifer that has soft warts or wens on top of her head and neck and they are spreading to the body, some as large as walnuts. They are light in color and flat, with small neck. What are they and is there a remedy? H. A. A.
Friday Harbor, Wash.



Try giving your cow a half ounce of Fowler's solution of arsenic in the feed for some time. This is to be done provided that she is not giving milk. If she is, then I have no treatment to advise.

I want every Man in the Northwest to have this FREE Sample Packet -including Virgin Wool Cloth Samples - Tape Measure and Self-measuring Blank!

Order a Fine, Guaranteed, Virgin-Wool SPRING SUIT *Made to Your Measure!*

For Only $34

Virgin Wool is 100 per cent pure, long, fleece wool—clipped from the sheep's back, washed, carded, spun and woven into cloth with no cotton, shoddy, or wool substitutes of any kind added. More than half of the suits on the market today are made from shoddy and reworked wool. (Shoddy is made from old wool rags—reworked wool from manufacturer's clippings. Neither have any life or strength because of the old, short wool fibers). My clothes are made of Guaranteed Virgin Wool cloth only—that's why they give double the service.

My big mail order department can FIT you and please you with one of these handsome Genuine Virgin Wool Spring Suits—just as satisfactorily as though you bought here in person! I have sold thousands of suits to my customers throughout the Northwest and can please you—just as I have ALWAYS pleased them. This house is famed throughout the West for its wonderful tailor-made clothes—and square deal to every man.

During the last 12 years I have been doing the largest custom tailoring business in the Northwest. Do not confuse this with factory tailoring or the commonly known Ready-Made system of making clothes.

My Guarantee Is Your Protection:
I guarantee that your suit will be perfect in every respect. That the workmanship—tailoring—linings and trimmings are of a very high quality—and that you will get a PERFECT FIT. And, if it doesn't meet your requirements of a perfect suit, I will return every cent of your money! Mail coupon now!

One Man Made Money Last Year

His Success Indicates Good Line of Farming to Follow

There is a prevalent feeling that during the late lamented year of depression, 1921, the farmers of even the favored Inland Empire made no money.

Comes now Dean E. J. Iddings of the college of agriculture of the University of Idaho with the announcement that he has found one farmer who did make money. This fortunate man lived with his contented family on a place that had a few good milch cows, some chickens and a few pigs. Some alfalfa, clover and peas were grown on land that would have lain idle in summer fallow under the ordinary one-crop system. Another field of a few acres grew sunflowers or corn with which to fill the silo that stood beside the barn.

This farmer did not buy canned milk, even though he did live on a farm that produced grain as one of its principal crops. He did not buy bacon, because he raised his own hogs and smoked his own meat in his own smokehouse. His cream checks and the returns from his eggs paid the grocery bill and bought most of the clothing that the family required.

This man's name was Mr. Diversified Farmer. Dean Iddings is a strong believer in him and never loses an opportunity to urge Mr. One-Crop Farmer to take the necessary steps to change his name and go and do likewise.

Dean Iddings sees the fertility of our Inland Empire soils slipping away because of the one-crop system that takes away plant food and leaves little or nothing in its place. He sees the price of this deteriorating land growing higher and higher, to a point where nothing but the most efficient system of production can return a profit on the investment.

The remedy for this situation, as suggested, is diversified farming. The introduction of legume crops, such as clovers, alfalfa and field peas, serves in two ways to improve soil conditions. First, the legume gathers nitrogen from the air and stores it in the soil in available plant food form, and at the same time aerates the soil by means of its root system and leaves a humus content in the soil when plowed up for a succeeding grain crop. Second, it leads to the production of live stock in various forms, which in turn leaves upon the soil a large percentage of the plant food that is taken out by the feeds that the animals consume. Dean Iddings reports experiments on the University of Idaho farm in growing field peas on summer fallow. During a period of four years the pork production from these peas averaged 454 pounds per acre. These experiments included the year 1920, when pea production was unusually low. He calculated that with hogs at only 4 cents per pound this would be a return of over $18 per acre, or the equivalent of 40 bushels of wheat at 45 cents per bushel. At the same price for pork it would have equaled a 30-bushel crop of wheat at 60 cents per bushel. On the basis of 5 cents per pound for pork it would have equaled a 40-bushel crop of wheat at 56 cents per bushel, or a 30-bushel crop at about 75 cents per bushel.

In addition to these actual cash values the pea crop left the soil in suitable condition for a crop of wheat the following year, thus avoiding a year's idleness of the field and the depletion of soil fertility that would have followed a continued one-crop system.

Dean Iddings shows that it is possible to grow alfalfa, one of the best soil-building legume crops, on the average Palouse wheat farm and secure as high as from one and a half to three tons per crop per acre, with frequently two crops per year, unirrigated. Clover has also done well under similar conditions.

Experiments with sweet clover on the university farm have indicated the value of this crop in a diversification program. Last summer, when everything else on the farm was dry, sweet clover was green and was supplying a surprising amount of forage.

The modern diversification system requires the use of a silo. Indications are that the year-round use of the silo instead of its use for winder feeding only is desirable. Dean Iddings calculates that the efficiency of an acre may be multiplied three or four times by the judicious use of the silo the year round. A yield of only six tons of silage per acre would feed one animal 30 pounds of silage per day for a period of 400 days, whereas an acre in pasture would, under ordinary conditions, maintain one animal or less a much shorter period of time.

To sum the whole thing up, Dean Iddings does not believe that the farmer of the Inland Empire, or of any other section, for that matter, should carry his eggs all in one basket. It is safer to have several sources of income. Proper diversification gives year-round employment, improves soil conditions and leads to the development of better farm homes by reason of increased prosperity and more varied interests.

Uniform Grade

Important Phase in Marketing

One of the most important phases of cooperative marketing is to get products put out under a uniform package or grade. It is also one of the hardest details to establish, especially among growers who have been in the habit of doing their own selling. It was for the purpose of establishing more uniformity of their product that the Island Belle Grape Growers' association was formed at Detroit, Mason county, the district where the new variety originated.

"We could get a much better price for our grapes if we were more particular about the manner in which they were put into the baskets," says W. O. Eckert, son of Adam Eckert of Detroit, who originated the variety. "Last year some of the grapes went out before they were sufficiently ripened, but those of us who waited a few weeks longer not only got a better sale, but our grapes were actually preferred on the market by those who knew where they came from. If we can establish a uniform grade and require all growers in the association to conform to the rules, we can keep out such grapes as are of an inferior quality and tend to give the industry a black eye.

Need Uniform Weight.

"There is also a great need of a more uniform weight to the baskets," said Mr. Eckert. "In some cases the basket will vary as much as three pounds and the buyer does not know how much he is getting. Well ripened grapes should weigh from 6 to 7 pounds in the basket, depending on the size of the bunches and the condition of the grapes. We hope to get some good results from the association in the future and will perhaps establish a central packing plant."

Speaking of the possibilities of the Island Belle grape for planting in western Washington, H. F. Schumacker of Seattle said he believed there is little danger of creating an oversupply on the market. In fact, he said, there is a better chance of marketing 40 or 50 carloads than merely 10,000 baskets. The Island Belle is at its best when other varieties are off the market and there is, therefore, a better chance of a good return. The grades, however, should be standardized and the production handled on a basis that would interest the jobbers in the middle west.

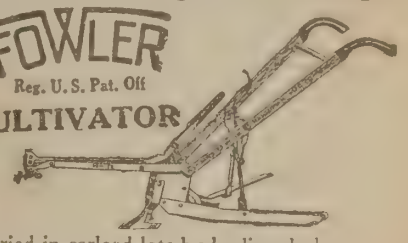
Invade California Market.

A trial shipment was made to California last fall with the result that a new trade channel shows itself for the Puget sound crop and more profitable market is expected next fall. Some cull grapes were sent to a cannery and are reported to have been used profitably and more have been ordered for next season.

The association has advised the members not to sell grape cuttings to nurseries in large quantities, but that it is better to keep the stock at home and make the variety a Puget sound product.

The climate here seems particularly adapted to the growing of this variety.

The directors of the association, J. F. Bauschert, E. Wilson and J. Wingert, were reelected and Mrs. Caroline Sund and W. B. Polk were added to the board. Adam Eckert, president; E. C. Suiter, vice president, and Charles Somers Jr., secretary, were reelected.



It Works Like a Hoe

The FOWLER Light Draft Cultivator makes ***bigger crops*** because it does not disturb plant roots. It puts the land in perfect condition to absorb rain, and makes a mulch of fine dust which conserves plant food and prevents the escape of moisture.

Covers 8 acres a day with one horse. One trip to the row. ***Cuts every weed.*** Does as good work as you can do with a hoe. ***Saves time and labor.*** Remove the plow foot, and you can cultivate astride the row.

The ideal cultivator for potatoes, corn, tobacco, beans, beets, tomatoes and truck crops. Can be adjusted to cultivate above or below the level, without disturbing the sides of the ridges.

The Hood Service Man speaks:

WE Americans want to learn by experience. Not that we doubt the other fellow necessarily — we just want to *know*. It is a good habit.

And among other things, it makes a market for all kinds of safety razors, phonographs, automobiles—to say nothing of tires. Don't stop experimenting, but when you are quite content to call it a day, try HOODS, and see if they do not about combine the requirements your experience has taught you to look for in a tire.

We might almost say that HOOD Tires are built for those men who have run the gamut in tire buying, and wish to settle upon a tire which year in and year out, under all conditions, will give honest, dependable service.

Fur Auctions

Little Journeys to the Market

The largest market for raw furs in the United States, and one of the largest in the world, is located at St. Louis. New York is rapidly forging ahead and Chicago also aspires to honorable mention in the list of the world's fur markets.

Fur auctions are held at various times during the year at St. Louis and New York. Enormous quantities of skins are offered. Buyers and sellers attend from London, Paris, Leipsig, Moscow and Tokyo, as well as from leading cities throughout the United States and Canada.

At these auctions furs gathered from all over the world can be seen. Pelts obtained by the school boy who traps muskrats along the placid waters of Willow creek may keep company with skins bought from a native of Kamchatka. Mink, kolinsky, raccoon, squirrel, opossum, fox, muhkrat, fitch and fisher skins are always in abundance, while a whim of fashion decreases the featuring of Persian lamb and broadtails this year.

A few days before the auctions open the skins to be put on sale are exhibited to the inspection of prospective buyers. They are exhibited in lots just as they will be put up for sale, so that a buyer who sees a lot of skins he wants while on an inspection tour will know just which lot to bid upon when the auctioneer begins crying his wares.

Each prospective buyer is required to put down a cash deposit of 25 per cent of the amount he intends to spend before he is allowed to bid. All business is strictly cash.

At the auction held at New York during the week of February 6 pelts valued at $3,000,000 changed hands. The skins were offered in small lots to enable the little dealers to bid. Prices were indicative of those in the open market. Advances were noted in some instances, but according to members of the trade the catch this year, both abroad and at home, has been exceptionally large, with the demand less than it has been in the last few years, so that the outlook in the fur market is for slightly lower quotations.

Similar auctions, under the auspices of other companies, are held in London and Winnipeg.

Great Dairy Meeting

A great educational dairy exhibit and a sale of 150 selected Holsteins will be features in connection with the annual convention of the Holstein-Friesian Association of America, at Kansas City June 4 to 10, representation at which breeders of the northwest are now planning. State agricultural colleges of Kansas, Missouri, Nebraska and Oklahoma will display exhibits showing modern methods of dairying, and the National Dairy council will cooperate. For the sale each state will be allowed to furnish cattle in proportion to its Holstein population and in accordance with strict production requirements. For the exhibition prizes totaling $600 will be offered, to be returned to state associations.

MUST ELIMINATE BOARDER.

We test the cows. Why not test the hens? One of the greatest handicaps on the average farm is that the flock is not studied carefully enough. We must eliminate the nonproducer.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

POULTRY (Baby Chicks) 174

WHITE LEGHORN AND ILL-A-HEE BARRED Rock chicks—Buy chicks this year that live and grow and are bred to lay. Butler White Leghorns and Ill-a-hee Barred Rocks are known for high average flock production. Before ordering elsewhere, write for circular telling how our breeding methods produce 300 flocks for our customers. All stock trap nested and pedigreed. Also get our prices on breeding cockerels and hatching eggs for each breed. Address Butler Poultry Farms, or Ill-a-hee Poultry Farm, Jennings Lodge, Ore.

WHITE LEGHORN CHICKS (TANCRED strain), from selected two-year-old hens mated to cockerels from 251 to 286 egg trap nested dams. March and April, $18 per 100, after April 22, $15 per 100. Bona Terra Ranch, Drain, Ore.

POULTRY—Baby Chicks (Continued) 174

YESTERLAID EGG RANCH, KENT, WASH.—Dear Sir: Am more satisfied every day with the chicks received the 17th. They are certainly husky and while Feb. chicks may be supposed to lack vigor, it is certain yours lack nothing. May I increase my order 150 chicks to be delivered with my March 22d order. Irving Kunz, Hoquiam, Wash. Dear Sir: The chicks I got from you the 20th of May are fine. Please let me know your prices for 1922, as I am in the market again for a good order. A. E. Rackow, Hollister, Idaho. Dear Sir: Please let me know the date my 1000 chicks will be delivered. The chicks you sent me in 1921 are just wonderful. Got 70 per cent lay all winter. H. H. Coffey, Chehalis, Wash. We hatch 12,000 of these kind of White Leghorn chicks every 5 days from our own eggs. All sold out until May 1st. Orders for hatching eggs can be filled any time. Largest, most modern and up-to-date trap nest poultry ranch in the world. Yesterlaid Egg Ranch, Kent, Wash.

400,000 BABY CHICKS—OUR WHITE LEGhorns are bred to lay; priced at $15 per 100. We hatch from some of the best flocks of R. I. Reds, Barred Rocks, Anconas and Minorcas to be found in the northwest. Chicks are priced at $22.50 per 100. Send $1 deposit per 100 with your order, paying the balance on inspection of chicks. Safe arrival guaranteed. We have a few standard makes of incubators and brooders at greatly reduced prices. Send for our circular offer. Seattle Hatchery, 1906 Pike place, Seattle.

"FRESHLAID" WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for the heaviest egg production; every "Freshlaid" male is from a high record hen. Freshlaid Farms is one of largest and oldest chick plants in the Inland Empire. There is a real demand for "Freshlaid" chicks, especially from our old customers. We are sold out until May 1. Write at once if you wish May chicks. May chicks make ideal winter layers. Catalog. Freshlaid Farm, Colfax, Wash.

FOR SALE—WHITE LEGHORN BABY chicks from free range selected hens mated with pedigreed cockerels from 200-287 egg trap nest records. May and June prices $3.50 per 25; $6.50 per 50; $12 per 100. Special prices 500 and 1000 lots. Safe arrival guaranteed. You pay only for chix received alive and in good condition. No money in advance, pay on delivery. Order now. Established 1898. Must Hatch Incubator Co., 445 Seventh st., Petaluma, Cal.

The GAUNT GRAY WOLF

By DILLON WALLACE

Copyright, 1914, by Fleming H. Revell Co. Published by special arrangement with the International Feature Service, Inc.

(Continued from page seven.)

country with huskies," continued Ed, "an' up th' coast with huskies, until he goes adrift on th' ice—him an' his two huskies he has with he—an' when they thinks they's lost, or like t' be lost, they comes on a tradin' vessel froze in th' ice an' loaded wi' tradin' goods an' furs, an' not e'er a man aboard she. Bob an' th' huskies sails th' vessel in here when th' ice breaks up, an' th' ship goes free.

"That were just one year ago. Me an' Dick gets out from th' trails th' day Bob gets home, an' Douglas goin' with us, we sails th' vessel, which were 'The Maid o' the North,' t' St. Johns, an' Bob gets $15,000 salvage money A rare lot o' money, sir, that were for any man t' have, let alone a lad."

"What happened to the little girl—his sister?" asked Shad.

"She goes t' th' hospital, an' comes back t' Wolf Bight in September, cured an' fine. She be a fine little maid, too—a fine little maid," Ed asserted.

"What was done to the halfbreed Indian—Micmac John, I think you called him?"

"Micmac? Oh, he were killed by wolves handy t' th' place th' Injuns finds Bob. Me, wi' Bill an' Dick, here, goes lookin' for Bob an' finds Micmac's bones where th' wolves scatters un, an' handy to un is Bob's flat sled, an' thinkin' they's Bob's remains I hauls un out in th' winter, an' his folks buries un proper for his remains before he gets out in th' spring."

"What an experience for a kid!" exclaimed Shad. "He must have had some rattling adventures?"

"Aye, that he did," said Ed. "'Twould be a long story t' tell un all, but there were one, now——"

"Now don't go yarnin,' Ed," interrupted Dick, who had stepped out of doors and returned at this moment. "Ed never tells un straight, Mr. Trunbridge."

"Troonbridge," broke in Ed.

"Trowbridge," volunteered Shad.

"Mr. Trowbridge," continued Dick. "He makes un a lot worse'n Bob tells un. Fog's clearin', Ed, an' we better be goin' after we eats dinner."

"That we had, an' the fog's clearin'," agreed Ed.

"But how about Ungava Bob? I'd like to meet him. Do you really think I may be able to engage him to guide me on a two or three weeks' trip?" asked Shad.

"Aye," said Ed. "I'm thinkin,' now, you might. Bob's not startin' for th' trails for three weeks, whatever, an' he's bidin' home till he goes, an' not wonderful busy. I'm thinkin' Bob could go."

"That settles it," Shad decided. "I'll look him up."

"You'll be welcome t' a place in our boat," suggested Dick. "'Tis a two days' sail, wi' fair wind. They's plenty o' room, an' we can tow th' canoe. Me an' Ed lives at Porcupine Cove, an' you can paddle th' canoe over from there t' Wolf Bight in half a day, whatever."

"Done!" exclaimed Shad.

With the assurance of Mr. James Forbes, the factor, that the rivers flowing into the head of the bay, a hundred miles inland from Fort Pelican, offered good canoe routes, Shad felt that a kind fate had indeed directed him to Fort Pelican, and that he had been particularly fortunate in meeting the two trappers.

"Bob Gray will be a good man for you if you can engage him, and I think you can," said Mr. Forbes. "Bob has had some truly remarkable adventures, and he's an interesting chap. Ed Matheson will probably relate these adventures to you, properly embellished, if you go up the Bay with him and Dick Blake. Take Ed's stories, though, with a grain of salt. He is a good trapper, but he has a vivid imagination."

Shad accepted Mr. Forbes' invitation to dine in the "big house," as the factor's residence was called, and when, after dinner, Mr. Forbes accompanied him to the wharf, the trappers had already stowed his outfit into their boat, and the two men were awaiting his arrival. No time was lost in getting away. Sail was hoisted at once, and with Shad's canoe in tow the boat turned westward into the narrows that connect Eskimo Bay with the ocean.

"Th' wind shifted t' nu'th'ard, and when we gets through th' narrows there'll be no fog," Dick prophesied, and his prophecy proved true. Presently the sky cleared, the sun broke through the mist, the freshening north wind swept away the last lingering fog bank, and as a curtain rises upon a scene, so the lifting fog revealed to Shad Trowbridge the weird, primitive beauty of the rugged northland that he was entering.

The atmosphere, so lately clogged with mist, had suddenly become transparent. To the southward, beyond a broad stretch of gently heaving waters, rose a range of snow-capped mountains, extending far to the westward. Reaching up from the nearby northern shore of the bay, and stretching away over gently rolling hills lay the boundless evergreen forest.

Somewhere in the distance a wild goose honked. White-winged gulls soared gracefully overhead. Now and again a seal rose to gaze for an inquisitive moment at the passing boat, and once a flock of ducks settled upon the waters. The air was redolent with the pungent odor of spruce and balsam fir—the perfume of the forest—and Shad, lounging contently at the bow of the boat, drank in great wholesome lungfuls of it.

All this was commonplace to the trappers, and quite unmindful of it Ed Matheson launched upon tales of stirring wilderness adventures in which his imagination was unrestrained, save by an occasional expostulation from Dick.

The wild region through which they were passing gave proper setting for Ed's stories, and Shad, a receptive listener, wished that he, too, might battle with nature as these men did. How tame and uneventful his own life seemed. Already the subtle lure of the wilderness was asserting itself.

Three days after leaving Fort Pelican Shad and the two trappers sailed their dory into Porcupine Cove. It was mid-afternoon, and Shad, impatient to reach Wolf Bight and begin his explorations in company with Ungava Bob, prepared for immediate departure, after a bountiful dinner of boiled grouse, bread and tea in Dick Blake's cabin.

"Better 'bide wi' me th' evenin'," invited Dick, "an' take an early start in th' mornin'. Th' wind's veered t' th' nor'-nor'west, an' she's like t' kick up some chop th' evenin', an' 'tis a full half day's cruise t' Wolf Bight, whatever."

"I can make it all right," insisted Shad. "Bob may not be able to give me much time and I want to take advantage of all he can give me."

"Well, if you must be goin', I'd not hinder you, but," continued Dick, "keep clost t' shore until you reaches that p'int yonder, an' then make th' crossin' for th' south shore, keepin' that blue mountain peak just off your starboard bow, an' you can't be missin' Wolf Bight. If th' wind freshens, camp on th' p'int, an' wait for calm t' make th' crossin' t' th' s'uth'ard shore."

"Thank you, I'll follow your advice," said Shad.

"Wait, now," called Ed, who had disappeared into the cabin, and reappeared with a rope. "I'm thinkin' I'll lash your outfit t' th' canoe. They's no knowin' what's like t' happen, an' 'tis best t' be sure, whatever."

Shad felt truly grateful to the two bronzed trappers as he shook their hands and said adieu to them. It was only his impatience to plunge into the deep forests reaching away to the westward and a growing curiosity to meet Ungava Bob that induced him to decline the sincerely extended hospitality of Blake and Matheson.

Afternoon was waning into evening when Shad reached the point Dick had indicated, and the rising breeze was beginning to whip the wave crests here and there into white foam.

Dick Blake had advised him to camp here if the wind increased. It had increased considerably, but Shad had set his heart upon reaching Wolf Bight that night, and he did not wish to stop. The sun was setting, but there was to be a full moon, and he would be able to see nearly as well as by day. The sea, though a little rougher than it had been during the afternoon, was not, after all, he argued, so bad.

"I'll make a try for it, anyhow; I know I can make it," said he, after a little hesitation, and turning his back upon the point he paddled on.

Presently, however, he began to regret his decision. With the setting sun the wind increased perceptibly. The sea grew uncomfortably rough. Little by little the canoe began to ship water, and with every moment the situation became more perilous.

Now, genuinely alarmed, Shad made a vain attempt to turn about, in the hope that he might gain the lee of the point and effect a landing. But it was too late. He quickly found that it was quite impossible to stem the wind, and he had no choice but to continue upon his course.

With full realization of his desperate position, Shad paddled hard and paddled for his life. He was a good swimmer, but he could not hope to survive long in these cold waters.

The canoe was gradually filling with water, but he dared not release his paddle to bail the water out. With each big sea that bore down upon him he held his breath in fear that it would overwhelm him.

Nearer and nearer the south shore loomed in the moonlight, and with every muscle strained Shad paddled for it with all his might. If he could only keep afloat another 20 minutes!

But he had taken too desperate a chance. His goal was still a full mile away when a great wave broke over the canoe. Then came another and another in quick succession, and Shad suddenly found himself cast into the sea, struggling in the icy waters, hopelessly far from shore.

Twilight was settling into gloom, and the first faint stars were struggling to show themselves above the distant line of dark fir and spruce trees that marked the edge of the forest bordering Eskimo bay. Dark cloud patches scudding across the sky, now and again obscured the face of the rising moon. A brisk northwest breeze was blowing, and though it was mid-July the air had grown chill with the setting of the sun.

Ungava Bob, alone in his boat, arose, buttoned his jacket, trimmed sail, and by force of habit stood with his left hand resting upon the tiller while he scanned the moonlit waters of the bay before resuming his seat.

He was a tall, square-shouldered, well-developed lad of 17, straight and lithe as an Indian, with keen, gray-blue eyes, which seemed ever alert and observant. Exposure to sun and wind had tanned his naturally fair skin a rich bronze and his thick, dark brown hair, with a tendency to curl up at the ends, where it fell below his cap, gave his round, full face an appearance of boyish innocence.

He was now homeward bound to Wolf Bight from the Hudson's Bay company's post on the north shore, where he had purchased a supply of steel traps and other equipment preparatory to his next winter's campaign upon the trapping trails of the far interior wilderness, for Bob Gray, though but 17 years of age, was already an experienced hunter and trapper.

Suddenly, as he looked over the troubled sea, a small black object rising upon the crest of a wave far to leeward caught his eye. The small black object was Shad's canoe, and one with less keen vision might have passed it unnoticed, or seeing it have supposed it belated debris cast into the bay by the rivers, for the spring floods had hardly yet fully subsided. But Bob's training as a hunter taught him to take nothing for granted, and, watching intently for its reappearance from the trough of the sea, he presently discerned in the moonlight the faint glint of a paddle.

"A canoe!" he exclaimed, as he sat down. "An' what, now, be an Injun doin' out there this time o' night? An' Injuns never crosses where this un be. I'll see, now, who it is, an' what he's up to, whatever," and, suiting the action to the resolve, he shifted his course to bear down upon the stranger.

The hunter instinctively attributes importance to every sign, sound or action that is not in harmony with the usual routine of his world, and by actual investigation he must needs satisfy himself of its meaning. This is not idle curiosity, but an instinct born of necessity and lifelong training, and it was this instinct that prompted Ungava Bob's action in turning from his direct course homeward.

"'Tis no Injun," he presently said, as with a nearer approach he observed the stroke. "'Tis too long an' slow a paddle-stroke."

This puzzled him, for he knew well every white settler of the Bay within a hundred miles of his home, and he knew, too, that only some extraordinary mission could have called one of them abroad so late in the evening, and particularly upon the course this canoe was taking at a season of the year when all were employed upon their fishing grounds.

Gradually he drew down upon the canoe, until at length he could make out its lines, and observed that it was not a birch bark, the only sort of canoe in use in the Bay by either Indians of white natives. The canoeist, too, was a stranger in the region. Of this he had no doubt, though he could not see his features.

He was well within hailing distance, though it was evident the stranger in the canoe had not yet discovered his approach, when a black cloud passed over the face of the moon, plunging the sea into darkness, and when the moon again lighted the waters canoe and canoeist had vanished as by magic.

Like a flash, realizing what had happened, Bob seized a coil of rope, made one end fast to the stern of his boat, grasped the coil in right hand, and, tense and expectant, scanned the sea for the reappearance of the unfortunate stranger.

Presently he discovered the submerged canoe directly ahead, and an instant later saw Shad rise to the surface, strike out for it, and catch and cling to the gunwale.

Bob poised himself for the effort, and as he scudded past, measuring the distance to a nicety, deftly cast the line directly across the canoe and within the reach of Shad's hand, shouting as he did so:

"Make un fast!"

Without looking for the result, he sprang forward, lowered sail, shipped the oars, pulled the boat about, and Shad, who had caught the rope, had scarcely time to thrust it under a thwart and secure it before Bob, drawing alongside, caught him by the collar of his shirt and hauled him aboard the boat. Seizing the oars again and pulling safely free from danger of collision with the canoe, Bob hoisted sail, brought the boat before the wind and, resuming his seat astern, had his first good look at his thus suddenly acquired passenger.

Shad, amidships, was engaged in drawing off his outer flannel shirt, from which he coolly proceeded to wring, as thoroughly as possible, the excess water, before donning it again.

Not a word had passed between them, and neither spoke until Shad had readjusted his shirt, when, by way of opening conversation, Bob remarked:

"You'm wet, sir."

"Naturally," admitted Shad. "I've been in the bay, and the bay water is surprisingly wet."

"Aye," agreed Bob, "'tis that."

"And surprisingly cold."

"Aye, 'tis wonderful cold."

"And I'm profoundly grateful to you, for pulling me out of it."

"'Twere fine I comes up before your canoe founders, or I'm thinkin' you'd be handy t' drowned by now."

"A somber thought, but I guess you're right. A fellow couldn't swim far or stick it out long in there," said Shad, waving his arm toward the dark waters. "I'm sure I owe my life to you. It was lucky for me you saw me."

"'Tweren't luck, sir; 'twere Providence. 'Twere th' Lord's way o' takin' care o' you."

(To be continued.)

Bits of Fun FOR Everyone

They Knew.

Mr. Biggs was planning to build a garage in his yard, so he bought an expensive saw.

He left his office early the next afternoon with the intention of starting the job. Putting on a pair of overalls he went out into the garden.

"That new saw I bought isn't worth a nickel!" he stormed an hour later. "Why, the thing wouldn't cut butter."

"Oh, yes it would, daddy," he exclaimed earnestly. "Why, Ted and I sawed a whole brick in two with it this morning."—Pittsburgh Chronicle.

Discipline.

"Why don't you send your boy Josh to college?"

"I'm going to," replied Mr. Smith. "Not that I think a college education is necessary for success in life, but I want to get Josh cornered some place where he'll be compelled to admit there are a few things he doesn't know."—Washington Star.

Tied and Untied.

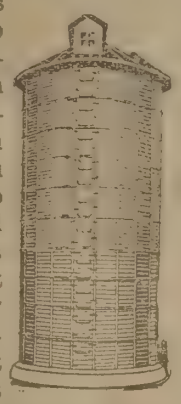
United States Senator Oddie of Nevada hails from Reno, where the divorce mills are said to work night and day, and he has been subject to quite a bit of wild spoofing from his colleagues on this account. The senator was in a group listening to some of these wise observations on his home city, and when he had an opportunity to get into the conversation he remarked: "Well, Reno is the only city in the world where the people go down to the trains to see the tied come in." For a second or two nobody got just what he meant, but about the minute it was beginning to percolate into the minds of his hearers he added with a smile: "And they go down to the trains to see the untied go out."—National Republican.

An Automobile Story.

A school girl was required to write 200 words about an automobile. She submitted the following: "My uncle bought a motor car. He was out riding in the country when it busted going up a hill. The other 180 words are what my uncle said when he was walking back to town, but I know you wouldn't want me to repeat them."—Boston Transcript.

Seemed Only Half as Long.

Teacher—Tell me, Freddie, how many days are there in a week?



Freddie—Six and a half, ma'am.

Teacher—What do you mean, Freddie?

Freddie—Because Saturday always passes twice as quickly as the other days.—Detroit Free Press.

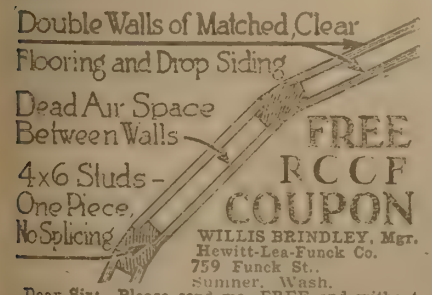
Last Chance for Free Roof With Your H-L-F Silo

Well, folks, if you want an H-L-F Silo, you'd better be getting it. Last call for Free Roofs. Roofs cost $35 each except on early orders.

The H-L-F Silo is the silo you want—no doubt about it. Listen to this from Sam Bowman, Clyde, Kansas: "The silo which we bought from you in 1914 is the best silo in this country. And it is as good today as when erected, as it does not show any signs of decay whatever, and I expect it to give service for at least fifty years more. It has the double-wall construction which prevents silage from freezing, as well as making it more substantial and durable than the single-wall construction."

H-L-F Silo

Direct to You at Factory Price



Direct to you at factory price means just one profit in the price you pay. We make the silo, ourselves, all the way from the tree. A few farmer representatives, mostly old customers, whose small commission comes from our profit and is charged to advertising. You get the rock-bottom price every time.

Free Roof
to Apr. 15th Only

This Free Roof offer means a saving to you of $35.00. It's worth $35.00 to us to have your order early. Also it gives us a chance to deliver silo to you when you want it. Therefore, if you place your order on or before April 15th, we'll cheerfully give you a complete All-Cedar Roof, made in sections, ready to put on, and including dormer and dormer window. If you answer this advertisement today, you will have plenty of time to look over our proposition and get your order in by April 15th. But April 15th is the dead line—NO FREE ROOFS AFTER APRIL 15TH, 1922.

Coupon Brings Silo Book and Full Information

I have no room in this advertisement to tell you all about the H-L-F Silo. But I have had plenty of room in a small book entitled "All About Silos," and this I'll gladly send you free, and with it a list of owners and price list. H-L-F prices are plainly printed in large figures, and include freight to your station. We have a system whereby every farmer gets a carload price on his order for a single silo. Fill in the coupon, please, right away, and Mail—then you'll be in time for a FREE ROOF if you decide to order.

Cooperation Succeeds

(Continued from page three.)

developed during 10 years' connection with the Salem Fruit union, was added that of his brother, who appears to have a natural "bent" for handling pools. In the sales department there is a system of filing which ordinarily in three minutes will furnish all the information needed on any car which has been sold. This is cross-indexed so that possession of any one of three facts about the car will make available its complete history. Records of sales and of the pools above mentioned are worked out to the finest details and nothing is allowed to be lost which would serve to market a car profitably, place it speedily or placate an irate cooperator. In this connection the association's system of keeping tab on its membership for purposes of classification and communication is interesting. On the wall in an outer office hangs a metal file of cards containing the names and "descriptions" of grower members, classified by districts and bearing also colored tabs which indicate the kinds of fruit grown on a member's farm. A glance at the file of a particular district shows what fruits predominate there—they like to keep the colors well distributed in the association office—and further examination shows the exact acreage in each fruit. For letter writing purposes there is an addressing machine using stencils which correspond to the grower's cards in the index. The G. M., desiring to fortify the prune growers, perhaps, against a barrage of misinformation from the enemy's camp, dictates a letter which is thereupon multigraphed. A single command: "Prune growers, front and center!" is issued to the addressing machine, and it does the rest. The association is strong on letter writing. Its officers believe that this is one of the most effective means of keeping its membership in line.

Would Stabilize Prices.

Instability of prices—one might almost say incongruity of prices—and lack of any attempt at distribution, even national, were perhaps the outstanding faults of the system which prevailed in Oregon before the Oregon growers organized. To these should be added also the utter absence of standardization and the fact that practically nothing was being spent in advertising Oregon fruits. Running afoul in its first season of one of the worst years for business in the history of the United States, the association nevertheless has knocked price cutting into a cocked hat, as one of its officers expressed it; has brought and held together 2000 growers owning 32,000 acres of fruit, by a program of education promoted through the holding of frequent meetings and publication of a house organ; has stood as a body against imports of Italian cherries and for reduction of freight rates, has constantly encouraged the growing of better stuff for market, and has worked continuously for the advancement of fruit interests of the northwest. Last year it put Maitland prunes in 40 new carload markets where prunes had never been before, and it is now completing an analysis of every big market in the United States, to show the attitude of that market toward the humble product that means a livelihood to hundreds of Oregon growers. In the fall of 1920 a small advertising campaign was started, limited almost entirely to New York city, and practically the same amount and kind of publicity was paid for in 1921. The advertising bill totaled $25,000 or $30,000 in the two years—hardly a drop in the bucket when compared with what some organizations are doing—and this will be increased as the association's tonnage becomes more dependable.

All-the-year selling, standardization of product and wide distribution, these three, and it would be difficult, perhaps, to say which of these is the greatest. But there is another factor in the success of the Oregon Growers' association which was particularly stressed by Mr. Lewis, viz., there is not a man in the organization—or at least if there is he won't be there long—who does not believe in cooperation.

"Nearly all of the men in charge of association affairs have been producers. Several now own orchards. Therefore they have the growers' point of view and the growers' interest at heart. The general manager of cooperative enterprise, as well as the men lower down, must believe in it, in its future, and in the things it aims to do. They must be men who are capable of hard work—"

"Yes, and of standing punishment," put in General Manager R. C. Paulus. "If the men in charge of this organization had not been just as described, and had not had in addition the vision to see beyond some of the clouds which at times have nearly obscured its path, it would not have been in existence today."

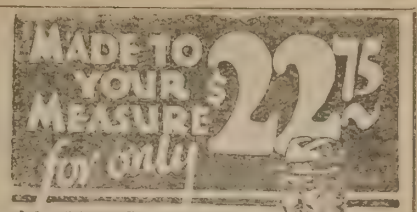
The Plan of Organization.

The Oregon Growers has this plan of organization:

1. Noncapital, nonprofit, purely cooperative in spirit.
2. Activities limited to members.
3. Fee $10.
4. Association reserves right to buy membership certificates in case of resale. (A very important consideration.)
5. Membership transferrable with property.
6. Member dropped when property sold.
7. All members have equal voting power.
8. Voting by mail allowed.
9. Proxies not allowed.
10. Each county elects its own directors.
11. Directors meet quarterly.
12. An executive committee elected from directors' meet once a month to transact business and hear reports of managers.

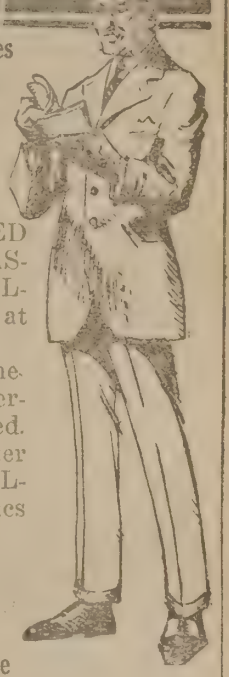
Its objects are to encourage production; preserve, store, can and market products, make advances, stop speculation, stabilize prices, develop markets, increase consumption, eliminate unnecessary middlemen and advertise Oregon products, particularly those of its fruit industry. The grower-member, who signs for five years, must ship to the association and may be charged liquidated damages if he fails to do so.

Has Grown Rapidly.



Starting August 1, 1919, with 134 members, controlling 3000 acres of fruit, the Oregon Growers' Cooperative association on September 1, 1920, had 1500 members, controlling 28,000 acres. Today it has 2050 members, controlling 34,000 acres from Medford to The Dalles, except Hood River, and in spite of serious problems which it still has to face, probably can be counted among the few successful cooperative organizations of the northwest. Over one-half of the prunes in the territory, about one-half of the Bartlett pears, one-third of the commercial apples, one-half of the walnuts, over one-half of the commercial cherries, about 25 per cent of the loganberries and a considerable proportion of the strawberries, raspberries, blackberries and (at The Dalles only) apricots, peaches, grapes and early vegetables were marketed through the association last year; also broccoli in the Willamette and Umpqua valleys only. Business ran close to $2,000,000 and included, in quantities handled, 7,500,000 pounds of prunes, 250 carloads of Bartlett and fall pears and 400 carloads of apples. The prune business last year totaled about half that of 1920 and the pear business only about 60 per cent, but the apple business was about the same and was more satisfactory because the "big freeze" of 1919 removed from the market many varieties that commercially were not only not in demand but undersirable. In 1921 the association became the largest handler in the state of both cherries and loganberries. It sold 1000 tons of the former, of which 40 tons went east under ice and the rest were used for canning and maraschino purposes. The association acreage in loganberries has increased so fast that with an average crop in 1922 it will handle 2000 tons, or twice as many as its nearest competitor. It marketed 1250 tons last season. In the winter of 1920 60 cars of broccoli, mostly from the Umpqua valley, were handled, and more than twice that quantity was in sight for this year, but the cold weather has cut the crop in half and it will be about the same as last season.

Operates All-Year Plants.



All-year plants of the association, where resident managers are employed, are at medford, Roseburg, Salem, Dalles, Sheridan and The Dalles. Packing plants for either apples or prunes are owned or rented for the seaso nat Grants Pass, Riddle, Myrtle Creek, Sutherlin, Corvallis, Dever, Scott's Mills, Yamhill, Forest Grove, Carlton, Newburg and (for the first time this year) at Canby and Hubbard. The growers own eight prune packing plants and lease one other—six in the Willamette valley, three in the Umpqua—and four large driers are owned—two 16, one 32 and one 40 tunnel, the latter one of the largest in the state.

A board of 21 directors elected annually from among the members, by plant districts, manages the association's affairs. It

Yakima Ranch for Sale

I own and offer for immediate sale, at a bargain, 112-acre dairy and hay ranch, located seven miles from Yakima and only one mile off paved road; all bottom land and level. Place has government water right to Natches river, giving plenty of water for irrigation without cost; also has good five-room plastered dwelling with basement, two wells, one of which is concreted, good hay barn and cow barn and milk house. All tools and implements, including separator, go with the place, as well as two fine large brood mares.

About 80 acres are under cultivation, balance in cottonwood timber and a small family orchard. For the person who wants a real place all ready to work and produce from the day he goes on it, he can't beat this and it is a real bargain at the price, $14,000. I will give terms with a reasonable payment down and balance over a long period of years with interest at 6 per cent. I purchased this place for a relative whose health failed him, making it necessary for him to leave, and am now going to sell it, as I am not a farmer.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

LET ME BE A FRIEND.

O Lord, I have no prayer for sect or creed,
But this: I pray when you are bending low.
Give me an eye to see my neighbor's need,
A heart to feel his woe.

To be called wise or great or good or grand
By men, is not my wish—a vain desire—
But just to clasp my neighbor by the hand
In friendship, I aspire.

Others may strive for honor, wealth or power,
May grasp in eagerness, in pleasure spend,
All these will vanish in a passing hour,
So let me be a friend.

—Selected.

Dear Mrs. Barland: I have been reading the Family Circle letters and find them very interesting. I am puzzled about several things and will ask your opinion concerning them.

If a stranger lifts his hat and says "how do you" are you supposed to pass without even seeming to notice him? If a friend lifts his hat should you smile and greet him? When a man thanks you for a dance what is the proper thing to say? I am 17 years old, 5 feet 6 inches tall and weigh 137 pounds. Am I too heavy for age and height? M.

My Dear Young Friend: If you had written your last name carefully so I could have made it out, I am sure the personal letter I wrote you wouldn't have been returned to me "unclaimed." I spent many valuable minutes trying to make it out but my guess was not correct, it appears.

I consider your questions important and will answer them here in the order given.

No girl should pay the least attention to any stranger who bows and lifts his hat. He is trying her out to see if she will take up with a stranger and will respect her if she ignores his presumptious advances. He might not acknowledge it, but down in his heart he will. The right sort of young man can manage to get an introduction if he is determined upon it and that is the proper way to meet young men.

Girls must protect themselves if they will keep free from embarrassing situations and the sooner they learn this the better it will be for them.

When a friend meets you and bows and lifts his hat it is proper to return the bow; in fact, it would be very discourteous not to do so. I can not imagine any well meaning young man bestowing a courteous greeting a second time on a friend who would cut him in so decided a manner as to ignore his bow.

When a man thanks you for a dance, a bow and pleasant smile is often sufficient, but it is good form to say "I, too, enjoyed the dance," or "thank you, it was a pleasure." I am assuming that you did enjoy the dance. If your partner was unduly familiar as I have seen happen, you are not called upon to even act as if you had enjoyed his attendance.

Never appear eager to receive attentions even if you really like the man and desire his attention. Men don't like to be chased and you will interest them more if you keep them guessing.

I think you are about the right weight for your height, but shouldn't be much heavier for a well proportioned figure

I am very glad to have you girls write me about these things. I shall never be too busy to answer you and I hope to hear from you again and from many more. You are 17 and what you do now and how you form your opinion of these matters will have great weight on all your life. My last word is to be the "captain of your own destiny" when associated with men. Retain your self-respect under all circumstance. Girls must take care of themselves in their association with men. They needn't be prudish, but just plain womanly and self-respecting, and the young people they mingle with will soon learn that one can be a good comrade and a jolly companion without permitting undue familiarity.

Remember this, dear girls, plain, genuine, simple goodness is always appreciated in young and old and every age.

ALICE W. BARLAND.

Dear Mrs. Barland: I give my method of bleaching dish towels or unbleached muslin. Wash cloth or towels before boiling, fill wash boiler half full of water, cut half bar of any good laundry soap into it and add two tablespoons of bluing and half-dozen lemon rinds or more. Put in the towels and boil hard for 15 or 20 minutes, rinse in two waters and hang out to dry. MRS. MABEL CLEMAN.

A young girl of 17 sent me a method something like this. She uses more soap and leaves out the lemon rinds. She gave me no address so will thank her here.

A. W. B.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Cheerfulness is a habit which should be cultivated.

Dr. Copeland.

It must be admitted that cheerfulness is both a cause and an effect. It produces good digestion, makes work easy, and brings about contentment of mind.

In turn, success in business, gratified appetite and freedom from pain result in cheerfulness and joy.

Some folks are miserable and cranky on "blue Monday." They have formed the habit of "blowing off steam" on Monday. They clean house with their tempers on Monday.

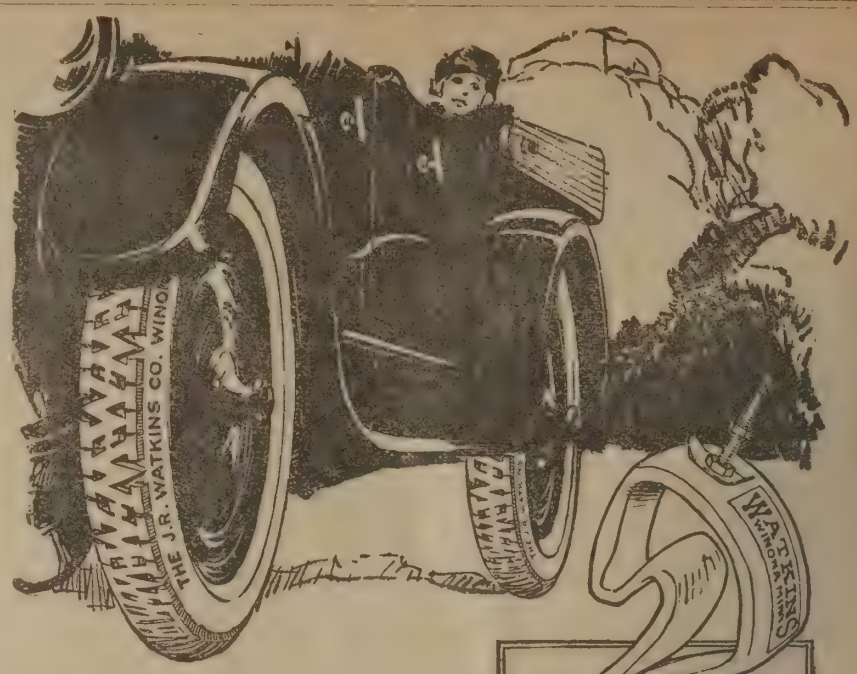
This is a bad habit. It is an unnecessary habit. It is an inexcusable habit.

I look with pity upon a man who has everybody in a ferment of misery because he chooses to vent his feelings on his associates.

A business man who growls at his clerks all through the first half of the day is equaled in manners only by the clerk who "snaps the head off" of any customer she serves.

Why give way to such emotions? It shows as little character as to yield to the temptation to steal or to commit some other crime of impulse.

I confess I feel more or less hypocritical in preaching a doctrine which I do not practice fully. At least, however, I can admit that I know better, and that I am ashamed after I have yielded to the bad habit of depression, crustiness or open ugliness of spirit and action.



These bad habits undermine the health. They produce indigestion, headache, eyeache, temporary blind spots and all sorts of nervous symptoms.

If you had no regard for the feelings of your neighbors you would cultivate the habit of cheerfulness, because that habit, studiously practiced, will add to your health, to your efficiency, and to your length of life.

Fear of disaster, fear of the poorhouse, fear of failure—every sort of fear is fatal to cheerfulness. You must have faith in God, in your fellow-men and in yourself, or else you will have gloom of spirit, with all its evil effects upon your soul and mind and body.

Every doctor will tell you that a contented mind is better than great riches. The Psalmist sang it, the doctors preach it—now go thou and practice it!

When you have converted your crankiness of soul into cheerfulness of spirit you will have better health and serve society as you have never served before.

TIRES that will stand up in the service of the Watkins Dealer *must* be good tires. Watkins "Big W" Tires were designed for this hard usage. And now you, too, can get these tires. Ask the Watkins Dealer about "Big W" Cords and Fabrics—and the "Big W" Guarantee.

Watkins
OVER 150 PRODUCTS
A Store at Your Door

For 54 years Watkins Dealers have served the homes of this country. There are today twenty million satisfied users of Watkins Products, and more than 5,500 Watkins Dealers are required to supply the demand. This tremendous business is the outgrowth of service and quality dating back almost to Civil War days. Your Watkins Dealer saves you time and money when he brings Watkins Products direct to your home. And, above all, he supplies you with more than 150 home needs of the very highest quality. The usual liberal credit policy applies. Stock up well when the Watkins Dealers calls. It pays! If one has not called recently, write us and we will see that you are supplied.

Prenatal Care

Do you know that the bureau of public health nursing and child hygiene of our Oregon state board of health is interested in the health and well-being of every rural home in the state? Do you know that this bureau is sending, free of charge, a series of letters of advice and information to every expectant mother in Oregon who may ask for this help?

These letters come once a month and are intended to encourage and advise women to the end that motherhood may be made as safe as possible and that our Oregon babies may be born healthy and strong. These prenatal letters will instruct in the matter of proper diet, clothes and personal hygiene and also as to danger signals and the need for consulting a physician early and periodically as well as having medical care during delivery.

It has been a well known fact for some time that proper instruction and care during pregnancy can and does prevent a large proportion of deaths of mothers.

If you desire these letters, apply to the child hygiene department, Oregon state board of health, Salem, Ore., giving your full name and address together with the date of expected confinement.

Grow Sweet Peas

(Continued from page eight.)

water and that is why it is best to plant in a ditch, leaving the seed well below the top of the ground, so that the water will not run off.

After the first two or three weeks of blooming the stems will begin to grow short and they will begin sooner if you don't give them lots of water and pick, or rather always cut, the flowers every day. Never pull or tear the vines, but use shears.

When the stems grow short put some barn bedding into an old tub or barrel, fill with water and allow to stand covered for 24 hours; dilute till you are certain you will not kill the plants, then pour it at the roots of the peas, keeping it off the plants; be very careful not to use it too strong. Make it weak and put it on three or four days in succession and you can almost see the stems grow.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3746. Lady's Dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. A 38-inch size will require 4 3-4 yards of 44-inch material. The width of the skirt at the foot is about 2 1-4 yards. Price, 10 cents.

3649. Misses' Dress. Cut in three sizes: 16, 18, and 20 years. An 18-year size requires 4 1-4 yards of 44-inch material. The width of the skirt at the foot is about 2 1-2 yards. Price, 10 cents.

3870. Lady's Dress. Cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38-inch size requires 4 yards of 44-inch material. The width of the skirt at the foot is about 2 yards. Price, 10 cents.

3694-3700. Lady's Costume. Waist 3694, cut in six sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. Skirt 3700 cut in seven sizes: 24, 26, 28, 30, 32, 34, and 36 inches waist measure. The waist will require 3 yards of 27-inch material. The skirt requires 3 1-2 yards of 40-inch material if without nap, and 3 1-8 yards of 44-inch material with nap. The width of the skirt at the foot is 2 5-8 yards. Two separate patterns, 10 cents for each pattern.

3884. Girl's Dress. Cut in four sizes: 6, 8, 10, and 12 years. A 12-year size requires 3 yards of 44-inch material. Price, 10 cents.

3262. Girl's Dress. Cut in four sizes: 8, 10, 12, and 14 years. A 12-year size will require 4 1-2 yards of 27-inch material for the dress, and 2 1-4 yards for the "jumper" or overblouse. Price, 10 cents.

3876. Girl's Dress. Cut in four sizes: 6, 8, 10, and 12 years. A 10-year size requires 3 yards of 38-inch material. Price, 10 cents.

3485. Lady's Apron. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42; extra large, 44-46 inches bust measure. A medium size will require 7 1-4 yards of 27-inch material. The width of the skirt at lower edge is about 2 yards. Price, 10 cents.

3362. A Comfortable Negligee. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42; and extra large, 44-46 inches bust measure. A medium size will require 8 1-2 yards of 27-inch material. Price, 10 cents.

3882. Lady's House Dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46, and 48 inches bust measure. A 38-inch size requires 5 yards of 36-inch material. The width at the foot is about 2 yards. Price, 10 cents.

3893. Lady's Chemise and "Step In" Drawers. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 1 1-4 yards of 36-inch material for the vest and 1 3-8 yards for the drawers. Price, 10 cents.

3901. Child's Dress. Cut in four sizes: 2, 3, 4, and 5 years. A 2-year size will require 1 5-8 yards of 32-inch material. Price, 10 cents.

CATALOGUE NOTICE.

High Points in News of the Week

The situation with reference to the soldiers' bonus bill appears as uncertain at the present time as at any period during its consideration. The measure was introduced into the lower house of congress last week carrying the provision that certificates should be issued to the ex-service men showing the intention of the government to pay them the bonus, these certificates to be used by the service men as collateral for loans at local banks. In the measure as drawn a number of choices of terms of payment are given to the ex-service men, and the uncertainty as to the number of men selecting the various options renders it impossible to estimate accurately the total amount necessary to pay the entire bonus. It is estimated all the way from $1,000,000,000 to $4,750,000,000.

The United States treasury department has gone on record strongly as opposed to this method of payment, even going so far as to suggest that local banks do not accept the certificates as collateral, as it would mean the tying up for several years of large sums of money needed in the conduct of the country's business.

President Harding still recommends the general sales tax as the most equitable means of raising the money. In order to give a little more time to consider the proposition, and for business conditions to adjust themselves, he last week recommended that further action on the measure be postponed for a period of 90 days.

* * *

With a view to conforming to the recently enacted budget law, the United States senate and the house of representatives have consolidated all appropriation work in the hands of a centralized appropriation committee in each house. Heretofore appropriation bills for such purposes as the army, navy, postoffice, agricultural department and so on have been handled by separate committees of both houses dealing with these particular departments. Under the new budget law the heads of all such departments and all other government departments are required to make an estimate of their needs for the ensuing year and submit it to the budget commission, which, in turn, submits it to congress. The two new appropriation committees are for the purpose of centralizing consideration of ways and means of raising the money, in somewhat the same way that the budget commission centralizes the consideration of department needs.

* * *

What is claimed to be the largest single rock blast ever fired in the United States reclamation service occurred recently at Rimrock, in the Yakima valley, when five tons of TNT were exploded under a wall of rock that it was desired to use in the construction of the Rimrock reclamation storage dam. The charge dislodged 5000 tons of rock, it is estimated.

* * *

American foreign trade showed a considerable decline in January of this year as against a year ago. Exports for the month and for the last six months of 1921 were about half what they were for the corresponding periods a year ago. Imports increased a little in January, but decreased in proportion with the last six months of the preceding year.

* * *

The Smith-McNary reclamation measure, which has been in the process of formation by the senate committee on irrigation and reclamation for several months, was formally introduced into the senate last week by Chairman McNary of the committee. The measure provides for the appropriation of $350,000,000 to be used as a revolving fund for the development of land. As lands are developed and become valuable, irrigation district bonds may be issued against them, these bonds to be sold to raise additional money with which to do reclamation work. It is estimated that $2,000,000,000 would be made available by this means before the total reclaimable arear of the United States was placed under development.

* * *

The United States government has officially declined the invitation to participate in the international economic and financial conference to be held at Genoa in April.

* * *

A far-reaching supreme court decision relative to Japanese ownership of land was rendered in a California court last week. The case was brought by the state of California in an effort to have a piece of land that had been bought by a citizen of Japan in the name of his two American-born children revert to the state. The court held that the children, being American-born, were, under the constitution of the United States, American citizens and, therefore, entitled to hold the lands purchased for them. While the case will probably be appealed to higher courts, it is feared by some that it will have the effect of enabling Japanese to secure possession of hundreds of thousands of acres of land in California and other parts of the United States by vesting the titles thereto in American-born Japanese children.

A widespread coal strike is threatened by the organized coal miners of America, to take place April 1 unless the mine owners agree to new wage agreements and working conditions to take place of those now expiring. Secretary of Labor Davis, in President Harding's cabinet, is endeavoring to get the mine workers and the mine owners together for the adoption of an agreement that will prevent the strike.

Mt. Vesuvius, the historic volcanic mountain near Naples, Italy, is reported to again be in a state of eruption.

Farm Business and Markets Outlook

(Continued from page five.)

Prices for No. 1 American cheese on March 8 were:

CHICAGO—Flats, 20 1-2@21c; twins, 20@20 1-2c; S. daisies, 20 1-2c; D. daisies, 20@20 1-2c; longhorns, 22@23c; square prints, 22@23c.

FRUITS AND VEGETABLES.

Total season's shipments of potatoes from the leading 18 states have been nearly 25 per cent larger than in the same period of the previous crop year. The movement from producing sections has slowed down and prices have become more firm. The supply for the rest of the season appears ample. Round whites, sacked, are quoted at $1.70 to $2 per 100 lbs. in various consuming markets.

Total shipments of apples from all sections up to February 25 have been 78,216 cars, compared with 98,339 cars to the same date of 1921. The market displays a firm tone, although the demand is slow and supplies in sight for the rest of the season are up to normal. Baldwins are bringing $7 to $8.25 per barrel and Winesaps are bringing $2.75 to $3.75 per box in city wholesale markets.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Ore., March 11.—Cattle—Choice steers, $7.25@7.75; medium to good steers, $6.75@7.25; fair to medium steers, $6.25@6.75; common to fair steers, $5.25@6.25; choice feeders, $5@6; fair to good feeders, $4.50@5; choice cows and heifers, $6@6.50; medium to good cows and heifers, $5.25@6; fair to medium cows and heifers, $4.50@5.25; common cows, $3.50@5.25; canners, $2@3.50; bulls, 3.50@4.75; choice dairy calves, $10@10.50; prime light calves, $9@10; medium light calves, $6.50@9; heavy calves, $4.50@6.50.

Eggs—Lower; receipts 18,258 cases; firsts, 22@22¼c; ordinary firsts, 19@20c; miscellaneous, 21@21½c.

Live Stock Conditions

Live stock is generally in good condition and health, says the United States bureau of crop estimates in its report for the last half of February. Losses have been light. A good demand for stocker hogs and brood sows is reported in many sections. Prices are generally higher and sales of sheep and hogs are more profitable. Interest in cooperative marketing of dairy products is manifested in Louisiana and a better grade of dairy cattle is being shipped in. A considerable increase in the number of poultry is reported in Arkansas.

Seeding of clover is in progress in some parts of Illinois and a heavy demand for high-grade clover seed is reported. Some injury to clover and alfalfa fields is reported in Indiana and Wisconsin because of the unfavorable weather conditions. Pastures and ranges are improved generally by increased supply of moisture.

Farm Labor.

The supply of farm labor is generally plentiful at lower wages. The demand for laborers is limited by low prices of farm produce and lack of finances. Men from cities are seeking employment on farms in Michigan, but wood cutting is practically the only work offered.

ALBATROSS BRANDS

No oil for these paints

You Save 75%

The General Basic Products Company of Seattle has perfected a series of paints for inside and outside use which require no oil. They come in powdered form—all you have to do is mix them in water as the different varieties require—and apply. The result is a beautiful, quickly applied, economical finish in just the shade or tint you desire—and you save about three-fourths over the cost of paints which require oil. The principle is that of cement—and you know how lasting a cement finish is. Varieties are:

ALBATROSS COLD WATER PAINT
A standard modern day product—comes in interior and exterior white and a full range of beautiful colors.

ALBATROSS CONCRETE, BRICK AND STUCCO PAINT
Comes in a splendid agreeable range of colors.

For Interior Walls and Ceiling

Those beautiful, restful, pleasing and sanitary finishes which are now so popular, are obtained through use of the various **Albatross** products for this purpose, viz.:

ALBATROSS WALL FINISH
A superior quality cold water finish for interiors—walls and ceilings. Comes in a pleasing range of tints and white.

ALBATROSS VELATONE
The very highest quality finish for inside walls and ceilings—ready to use with hot water. Comes in eighteen beautiful tints and white.

Specialties

Dry putty and wall size are specialties required in connection with practically all interior finishing, refinishing and decorating. If you specify Albatross brand, you'll get the best.

ALBATROSS WALL SIZE
Economical and easy to apply — stops suction — kills alkali — makes a perfect foundation upon which to paper, paint or calcimine.

ALBATROSS DRY PUTTY (Rock Hard Putty)
For patching holes in plaster, finishing hardwood floors, mending bric-a-brac, etc.

Please mention THE WASHINGTON FARMER when writing advertisers.

Wilber Van Leuven is 8 years old and will have another birthday December 19, 1922. Wilber says: "We have 11 cows. Their names are Star, Gertie, Lady, Bossy, Spot, Pet, Daisy, Stubby, Blossom, Whitey and Speck." Lady has a little new calf. Wilber's home is in Stevens county, Washington.

Hilda Stark likes The Junior Farmer very much. Her sister gets it. Hilda was 9 years old January 21, 1922. Elsie and Gertrude are her sisters. Her home is in central Douglas county, Washington. She is in the fourth grade at school.

Ella McHargue is an eastern Washington cousin. January 10, 1922, she was 10 years old. Ella has five sisters. There are two cows, two horses and two pigs at the McHargue farm.

BEDTIME STORIES

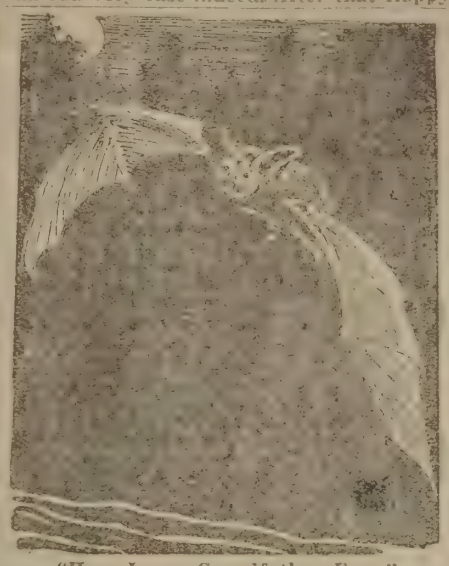
By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

SOME ONE THAT BILLY FORGOT.

Just as jolly, round, red Mr. Sun went down to his home behind the Purple Hills, Billy Mink came down the laughing Brook to the Smiling Pool. When he came in sight of the Big Hickory Tree on the bank of the Smiling Pool he stopped. What do you think he saw? When, there were all the little people of the Green Meadows and the Green Forest—Johnny Chuck, Happy Jack Squirrel, Striped Chipmunk, Chatterer the Red Squirrel, Reddy Fox, Jimmy Skunk, Bobby Coon, Danny Meadow Mouse, Unc' Billy Possum, Prickly Porky, Old Mr. Toad, Digger the Badger, Jumper the Hare, Sammy Jay, Blacky the Crow, Ol' Mistah Buzzard. And on the Big Rock in the Smiling Pool, sat Little Joe Otter, Jerry Muskrat, and Spotted Turtle, while on his big green lilypad, smiling at every one, sat Grandfather Frog.

They seemed to be waiting for some one and Billy Mink knew that that some one was himself. How he did wish that he hadn't boasted of what he could do! He would have run back home, but just then Ol' Mistah Buzzard's sharp eyes saw him.



"Here he comes!" cried Ol' Mistah Buzzard.

So Billy Mink had to go on. Everybody set up a great shout when he climbed up on the Big Rock, and though he felt just a little foolish, he tried not to show it.

Grandfather Frog made a little speech. He told what a wonderful fellow Billy Mink is, or thinks he is, and how he had boasted that he could do anything that any one else who wears fur can do. Then he invited Billy Mink and Little Joe Otter to show how they could swim.

It was a great race. Yes, indeed, it was a great race! And though Little Joe Otter won, Billy Mink proved that he can swim very fast, indeed.

Then Peter Rabbit and Billy Mink ran a race, and though Peter was first Billy Mink almost beat him, and proved that he can run very fast indeed. After that Happy

"Here I am, Grandfather Frog."

Jack Squirrel showed how fast he could climb a tree, but when he reached the very tip top Billy Mink was right at his heels.

Jumper the Hare made some wonderful jumps. Billy Mink jumped, too. Of course he didn't jump nearly so far as Jumper the Hare, whose legs are long and meant for jumping, but he jumped very well indeed. Then Billy Mink proved that he can follow a track with his nose just as well as Reddy Fox. He dug a hole to show that he can dig. Everything that any one else did, Billy Mink did, and with each success he felt better, for all the little Meadow and Forest People clapped their hands and shouted, "Hurrah for Billy Mink!"

Then Billy Mink looked down at Grandfather Frog and grinned. "Where's that fellow that can do something that I can't do?" demanded Billy Mink. "Where is he? I want to see him" Billy swelled himself up and began to strut back and forth on the Big Rock.

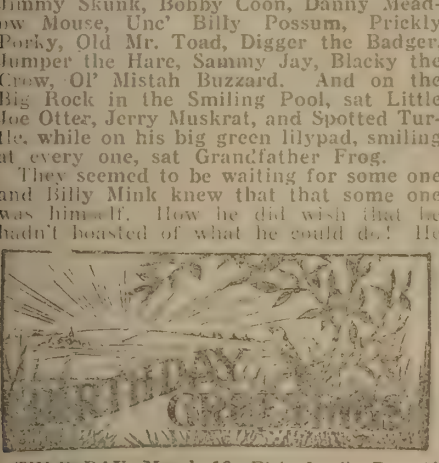
Grandfather Frog looked around at all the Little Forest People, and first winked one big goggly eye and then the other. Just as he did so a funny little squeaky voice, that seemed to come right out of the air, said:

"Here I am, Grandfather Frog."

Every one but Billy Mink looked up. Billy didn't need to, for as soon as he heard that voice he knew who it is that wears fur that can do something that he can not do. He had forgotten all about him when he boasted.

What was it? Why, Flitter the Bat, of course, who, as every one knows, can fly, while Billy Mink can not.

LETTERS WELCOMED BY AUNT NELLIE.



Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Farmers and Advertising

Advertising has played a mighty important part in the agricultural development of America.

The tillers of the soil have benefited from advertising in innumerable ways. Through this agency they have learned of countless improved methods for cultivating their farms and of many conveniences for their homes. Advertising has been the good friend which has introduced the silo, the telephone, the harvester, the incubator, the cream separator, water and lighting systems and dozens of other useful articles.

It is an almost invariable rule that the manufacturer does not advertise until his product is thoroughly perfected. If the new implement or machine is advertised farmers can depend on it.

Without this widespread confidence in advertising modern "machine" farming would certainly not have advanced as it has in America.

Advertising will continue to perform a useful service. It will pay you to read and investigate the advertisements in every issue of your state farm paper.

The department editors of this paper are anxious to be of service to you. Do not fail to write to us if they can be of help to you.

News for Breeders

(Continued from page twelve.)

uary 17, produced about 461 pounds of fat, not yet all official. She was shipped from Oregon to Chehalis, sold and shipped to Winlock, and had 11 different milkers during the year. She stood in a stanchion at each place. Curtis Blossom, a junior 3-year-old, finished in December with about 517 pounds of fat. Star of Yewloa finished February 22 with about 457 pounds. A remarkable record is that of Dawn's Sunshine, one of the show heifers that Mr. Sears bred himself. She was injured on the show circuit and dropped a calf at only five months, freshening at just past 2, yet she has milked up to 21 pounds and in January produced over 31 pounds of fat.

Ayrshires Rank High

Stewart Robin, an Ayrshire cow owned by E. W. Van Tassell of Wenatchee, Wash., heads the breed's 50-pound list as published for January and February, according to the report of the Ayrshire Breeders' association. She is credited with producing 1922.1 pounds of milk and 87.07 pounds of butterfat and 1774.3 pounds of milk and 71.86 pounds of butterfat in the two months, respectively. She has a record of 11,779 pounds of milk and 445.98 pounds of butterfat in the 300-day roll of honor division.

Stewart Robin is sired by Willowmoor Robin Hood 16th, now in the herd of the State College of Washington. He is the sire of one world's record cow, as well as several that are among the high five of their different classes. Her dam is Lady

Stewart Robin.

Stewart of Menie, the foundation cow of the Van Tassell herd. This cow was 16 years old last August. She was put on test the 16th of November and up to March 1 had produced 6397 pounds of milk and 215 pounds of butterfat.

Several of the Van Tassell cows rank high in their respective classes for the entire United States. In the month of September Glengarry's Scottish Queen was fifth cow in the mature class, producing 1580 pounds of milk and 82.8 pounds of butter. In the junior 4-year-old class Stewart Robin, who as a 3-year-old finished in the second place for the United States, is milking heavily again this year, being first in her class for September with 1957 pounds of milk and 89.8 pounds of butter. In the junior 3-year-old class Queechy's Choice of Wenatchee, who has been milking seven months, placed 10th with a production of 1189 pounds of milk and 50 pounds of butter. In the 2-year-old class Scottish Queen of Wenatchee placed first with 1287 pounds of milk and 60 pounds of butter. In the same class Queechy's Robin Hood of Wenatchee placed fifth with 1054 pounds of milk and 49.4 pounds of butter. Stewart Robin was also second highest cow of any age for the United States.

For the month of October Glengarry's Scottish Queen holds third place in the mature class with 1423 pounds of milk and 85.7 pounds of butter. Stewart Robin holds first place in the junior 4-year-old class with 1922 pounds of milk and 102.4 pounds of butter. In the junior 3-year-old class Queechy's Choice of Wenatchee holds 11th place with 1043 pounds of milk and 53.1 pounds of butter. In October Stewart Robin holds the first place in production over all ages.

SCAMAHORN SELLS TOP ANIMAL.

In the recent Western Royal Swine association's consignment sale at Spokane A Kloppenburg of Spokane paid $80 for a senior Poland China gilt consigned by E. I. Scamahorn of Moran Prairie, near Spokane. It was previously stated that $75 paid by J. H. Shinn for a Duroc Jersey was the top price of the sale.

LIVE STOCK BUSINESS BETTER.

Increased interest and stronger prices in the live stock business, especially hogs, is reported by Colonel Harry C. Cranke of Moscow, Idaho, who has conducted several sales throughout the northwest during recent weeks. At the S. L. Banks sale February 28 at Tekoa, Wash., 34 head of Duroc Jerseys averaged $59, with a top price of $70 and a low price of $47.50. On March 1 40 head of Durocs belonging to J. Simpson, Belgrade, Mont., averaged $49.75. On the following day about the same number of Poland Chinas belonging to W. Niven of Manhattan, Mont., averaged $51. At the Banks sale six Holstein bull calves, ranging from 4 weeks to 9 months of age, averaged $125. Colonel Cranke announces the following sales that he will conduct during the next few weeks: March 22, a consignment sale of hogs representing several breeds, at Bozeman, Mont.; March 27, on the Wagner Brothers farm at Dishman, Wash., a sale of Holstein cows; April 6, at Okanogan, a sale of Hereford cattle belonging to Frank Wingo of Hassan, Wash.; April 19, on the farm of T. Harrison of Santa Rosa, Cal., a sale of milking Shorthorn cattle.

Cooperation Succeeds

(Continued from page twenty-one.)

meets quarterly, but an executive committee of five elected from its membership meets monthly and keeps in very close touch with the operation of its business. The executive officers are R. C. Paulus, general manager; C. I. Lewis, assistant manager; W. I. Staley, secretary-treasurer, and M. O. Evans, field manager, who directs four field men, two in the Willamette valley, one in the Umpqua and one in the Rogue.

The organization is on a five-year contract basis, beginning with 1920, which without much doubt is one reason it is alive today. It faced the same difficulties that have greatly handicapped all like organizations, namely, large carryover of supplies and very large overdrafts to members. To these possibly may be added a different marketing season and the overvaluation of plants purchased.

The association handles sprays, spray matrials, fertilizer and other orchard equipment at its all-year plants at cost to members, but it is not entensively engaged in the distributing business. Its headquarters are in the Masonic building, Salem.

Upon organization in August, 1919, the association began issuing the monthly service or "house organ," The Oregon Grower, which has proved to be a valuable means of disseminating information among members, keeping them in touch with concitions and with the activities of the organization, and preserving the ties of cooperation. It usually contains 20 to 24 pages and is sent free not only to all members, but to all fruitgrowers in Oregon and in Clarke county, Washington, who desire it. Its present circulation is 8500.

Poultry Department Is Popular Feature of Washington Farmer

There is a constant demand in all parts of Washington for live, reliable information about poultry. It is a big subject on the farms of the state, and it ought to be, for millions are invested in the poultry on Washington farms.

The Washington Farmer meets this demand by maintaining an accurate, up-to-date, helpful poultry department in every issue. This department is one of the most popular features of the paper. Instead of dealing with conditions in some distant locality, IT KEEPS YOU POSTED REGARDING THE POULTRY INDUSTRY IN THE VERY STATE WHOSE SOIL YOUR BIRDS ARE SCRATCHING. It gives you an interchange of ideas with other practical breeders all over the state who are facing the same problems and conditions that you are. It reports their experiences with the different breeds of fowls, their views on henhouse construction, incubators, brooders, trapnests and scores of other important matters which have to do with making a satisfactory profit. Moreover, the guide to various breeders of fowls found among the farmers' "Want" Ads is a very valuable directory.

Popular and helpful as the poultry department is, it is just one of scores of things for which our readers welcome their state farm magazine.

Owing to the success of our cooperative plan, this magazine sells at the rock-bottom price of $1 for five years, 260 live, worth-while, entertaining issues. Our Cooperative plan asks of you that you renew your subscription at least 60 days in advance of the expiration date on the address label of your paper, and that you include your neighbor's order with your own. Help us make 1922 our banner year in cooperation.

Subscription Rates of The Washington Farmer:
25 Cents for 1 Year.
50 Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

$1.00 for Five Years

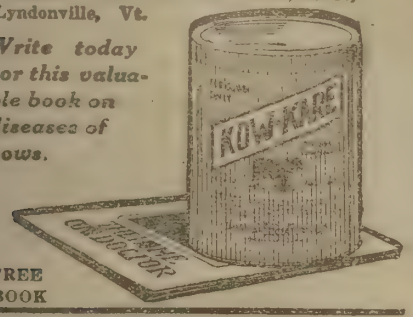
WHY SUFFER LOSS FROM SICK COWS!

Easy Home Treatment Keeps Cows Healthy and Profitable

Cows are pretty hardy animals. Practically the only diseases they suffer from are those which result from weakened vitality of genital or digestive organs. These, of course, are serious because they immediately reduce the milk-flow—and milk is money. We get scores of letters weekly like this one from W. H. Lawson, Petrolia, Ont., a dealer who sells Kow-Kare:

"We handle a lot of 'cow tonics', 'regulators', etc., but when it is up to us to sell something we can guarantee, we sell Kow-Kare. Only last month, we saved a valuable Registered Durham cow valued at $250 with Kow-Kare. The cow retained the afterbirth and after ten days' doctoring the veterinary said to kill the cow. The owner happened in when we were recommending your Kow-Kare, and told us his trouble. We donated a box of your Kow-Kare and he came back in five days for another box and paid for both."



As a sample of the endorsements we get from cow owners themselves, read this letter from C. E. Dodge, Dewittville, N. Y.:

"Since I have been on the County Farm, I have been using Kow-Kare in the dairy for the last ten years. I have 52 cows. My experience is that a few dollars worth of Kow-Kare saves us a great many dollars worth of veterinary bills, and also every cow in the dairy that I feed it to produces more all the year thru because of the Kow-Kare. I have no sick cows or trouble, when I begin feeding Kow-Kare, from the first of January until I turn them out in the Spring."

You, too, can be free of such cow ailments as Barrenness, Abortion, Retained Afterbirth, Scouring, Bunches, Milk Fever, Loss of Appetite, etc., by using this reliable cow medicine. General store, feed dealers and druggists sell it at the new reduced prices—65c and $1.25.

World Record Jersey, St. Mawes Prett/ Lady, as Senior Two Year Old, 824.35 Pounds Fat

We offer a full brother in blood to this wonderful cow, whose new world record was finished Feb. 21. His sire, Poppy's Golden St. Mawes, is a son of the great gold medal cow, St. Mawes Poppy, 952 lbs. fat, and by the gold medal bull, Rosaire's Olga Lad. His dam, Olga Lad's Daisy Girl, is a full sister to the dam of "Lady," whose record is shown above.

He is 50 per cent common blood with Poppy's Dortha, world record junior three-year-old, 994 pounds fat, and

Over 40 per cent common blood with St. Mawes Lad's Lady, world record senior yearling, 824 lbs. fat.

He is a straight backed, long bodied, good individual. Where can you equal his breeding? DANIELS JERSEY FARM, LESTER C. DANIELS, Tillamook, Ore.

Oreglow Jerseys

As the twig is bent so will the tree incline—start right with proven stock. Write us for Golden Glows.

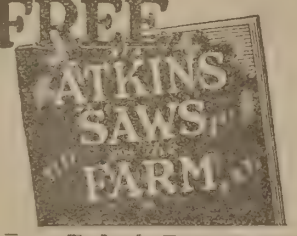
ATKINS SILVER STEEL SAWS

Cut Costs



Save time, money and material by using the saws that cut faster, easier and last longer. Look for the name on the blade—Atkins.

Only Atkins Saws are made of the famous "Silver Steel," tempered by the special Atkins process to take a keen, easy-cutting edge. After you've once used an Atkins — you'll never be satisfied with any other make of saw. A poor saw costs you more. Atkins saws save their cost in time and material — make work easier.

Atkins Silver Steel "Segment Ground" cross-cut saws —circular saws, hack saws, buck saws, docking saws, pruning saws—in fact, any saw for any purpose bearing the Atkins name means a bigger return for your money.

Your dealer can show you an Atkins saw for every use. If he does not have an Atkins, it will pay you to write us before buying a saw.

This Helpful Book on Saws Sent to You~FREE

The 1922 Atkins book is full of useful tables and information to save you time and money as well as describing the complete line of Atkins Saws. Just put the use you have for a saw below with your name and address. Get your free copy—NOW! It's worth money to you.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Save Half on Pure Gum Rubber HIP BOOTS

ONLY $2.79 and Postage

Yes—a clear saving of at least half on these wonderful pure gum rubber hip boots for men. Let us prove it absolutely without cost or obligation to you. Let us send your size on approval. When they arrive, examine them carefully. Try them on. If not delighted with your bargain, return the boots and you will not lose one penny. Guaranteed first quality rubber throughout. Friction lined; heavy soles and heels. All seams reinforced. Sizes, 6 to 14. Wide widths. Order by No. 6B A949. Price $2.79 and postage on arrival. State size wanted.

Send No Money

No—not one cent now. Just letter or postcard with name and address, also number of boot and size wanted. When boots arrive, pay only this smashed bargain price, $2.79 and postage. Then examine their quality and workmanship. Try them on and show to your family. If you are not simply delighted with your bargain—if you do not think you have saved at least $2 at our special sale price, send the boots back and we will refund your money promptly.

Don't Wait. Send Today.

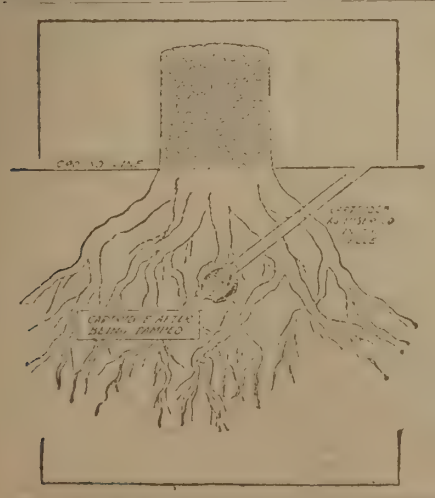
For Good Farming, Attractive Country Homes and Happy Country People

Land Clearing Requires Hardheaded Judgment

A "stump" may be defined as any kind of a growth that obstructs land, whether it is the butt of a cut tree, a tall snag, a living tree or a bunch of sprouts or brush. From the viewpoint of a farmer it is a stump if it obstructs the plowing and other tillage of the land.

Before deciding to clear land, the owner should consider several features of the matter well. The reckless slaughtering of the timber has left in stumps many thousands of acres of land which is not fit for cultivation and that should go back into timber. Such land, of course, should not be cleared. On the other hand, it is folly to permit brush land which has good soil to lie idle when a hundred years will not develop profitable timber on it.

Much of the land that is in woods should be left so, for timber and for fuel. Every farm should have its timber tract, where the forest is conserved in a way to make it permanent. To cut young growth that will make good timber in a reasonable time is a mistake, no matter how good the soil is. Remember, too, the wind break value of a piece of woods adjoining farm land, and consider the effect on land you now farm of taking away the protection afforded.



Do not clear land where the soil is too stony to be cultivated to advantage, or land that is exceptionally steep or incurably swampy. Do not clear when the profits would not justify the clearing. And do not clear when you can buy equally good improved land for less than the cost of clearing.

There is a certain sentimental satisfaction in clearing and cleaning up one's own place, connecting fields and improving it generally, even though such improving will not add greatly to the actual money income from the crops. This will have a bearing in some instances.

But hardheaded judgment should not be swayed too much by sentiment, for there are a good many thousands of acres that have been cleared and now are parts of farms which it would be wise and profitable to plant to forest again. Lay out your clearing carefully. Include no corners, gullies or steep places you will afterwards neglect. And make sure your field is rightly placed in relation to the rest of the farm.

These are among the points given in this article, taken from "Clearing Land of Stumps," by J. R. Martin, published by the Institute of the Makers of Explosives, New York city. This institute is made up of a dozen or more of the larger manufacturers of explosives and the bulletin's aim is to give the sum of the experiences to date of nearly all makers of explosives as well as of farmers who have coped successfully with the problem of stumps in the fields, roads or any land to be cleaned up.

About new clearing there may be some question, but about taking out stumps in good cultivated land there can be none. There are stumps in fields and along fences, roads, hedges and on home grounds. There are pastures that are pastures and not wheat fields or orchards because cultivation among the stumps is too inconvenient. There are old fruit trees and old shade trees that are diseased and a menace. All these should come out, and the quicker they come out the better.

How cartridges of powder swell and fill the hole when they are split and pressed with tamping stick.

There are about 500 different varieties of trees which make stumps in America. There are three general types of roots—lateral roots, semi-tap roots and tap roots. The largest class of stumps is the semi-tap root class.

REMOVING STUMPS.

Several methods of removing stumps are more or less well developed throughout the country. Probably no one method is best all the time and in many cases a combination of various means will be found most effective.

Digging out the stumps.

Pulling the stumps with horses or machines.

Burning the stumps, and

The use of explosives to blast out the stumps, are some of the chief methods employed.

It costs more to take out stumps while they are green than to do the work a year or more later after the bark and top wood have rotted from the roots. At the same time it costs money to miss crops—to wait from summer till the following spring is not a bad idea, for that loses little or no time and starts the rotting process which makes removal easier and cheaper.

When stumps are small or numerous they can be pulled by a team of horses hitched direct by a capstan puller, traction engine or donkey engine. The same is true to a lesser degree when larger stumps grow small and swallow roots, which require little power to lift and move.

For larger stumps, explosives have been found effective and economic, though there are important considerations which modify such a rule. One of them is that of the soil.

Explosives work more effectively in heavy, tight soil such as moist clay, than in dry sand.

Old, well decayed stumps may be blasted out. Small green stumps may be blasted out clean, roots and all.

Large green stumps nearly always require a combination of methods, as for instance, blasting and pulling. The cost of explosives often can be cut down by making use of such a combination or method. A heavy team or other means of pulling will take out roots after the ground has been loosened with explosives.

Generally speaking, tap root stumps larger than your arm should be blasted.

There are two ways of blasting out true tap-root stumps. One is to bore a hole in the wood of the tap root itself and the other is to place the charges right alongside the root and against it, like mudcap charges are placed in stone blasting. In placing the charge in the wood, make a hole in the ground down to a point a couple of feet below the surface of the ground. Then bore a hole in the wood with a wood augur. This hole should go two-thirds or three-fourths of the way through the root. Fill the hole in the wood with explosives, fire, and the resulting blast will cut off the root.

In placing the charge of explosive against the wood, get it at least four feet deep.

In all sorts of stump blasting the holes for the charges can be dug with narrow bladed shovels, spades or crow bars or bored with dirt augurs. All things considered it is hard to beat the bar and sledge combination for making holes for charges of no more than two or three sticks or for starting holes for larger charges.

The bored hole is better than the dug one because it can be tamped tighter. Holes for inch and a quarter sticks of explosives should be made with inch and a half augurs or bars.

In making holes for blasting out tap root stumps start the bar or augur straight down along the roots on the surface. When you have reached the required depth, wriggle the bar sideways to make the hole wide at the bottom.

When you have many stumps to blast out it often is a good practice to make holes in the forenoon and then to load and shoot after dinner.

Always fire the charges soon after they are loaded.

Use plenty of water when tamping the holes and tamp well.

Often there are holes dug by skunks, ground hogs, gophers, squirrels, rats or mice under stumps. Keep the charge of explosives away from these cavities—better fill them up.

A proper charge of explosive for a stump blast has a muffled report. It lifts out and splits the stump. Loud reports and the throwing of the pieces far shows that too much explosive has been used.

A green stump requires a great deal more explosive than one that has stood a few years. More explosives are required in stony land than in smooth land to blast out stumps. The harder and heavier the soil is, the less explosives are required and the looser and lighter it is, the more explosives are required. Dry soil requires more explosive than moist soil.

KINDS OF EXPLOSIVES.

There are scores of different kinds of explosives made and used for blasting purposes and many dozens of different names used for them. The most familiar name of any explosive in America is dynamite. Another familiar term is powder. Other names are farm powder, quarry powder, contractor's powder, coal powder, stumping powder, etc. Nearly every one of the explosives designated by these names is made in several strengths and in quantities to suit varying conditions.

All blasting explosives are not made of the same ingredients. They differ a great deal in many other ways than in quality, as quality is generally understood. Nearly every standard kind of grade is of excellent quality for some particular purpose and condition and practically every one can be classed as of poor quality for conditions and purposes to which it is not suited.

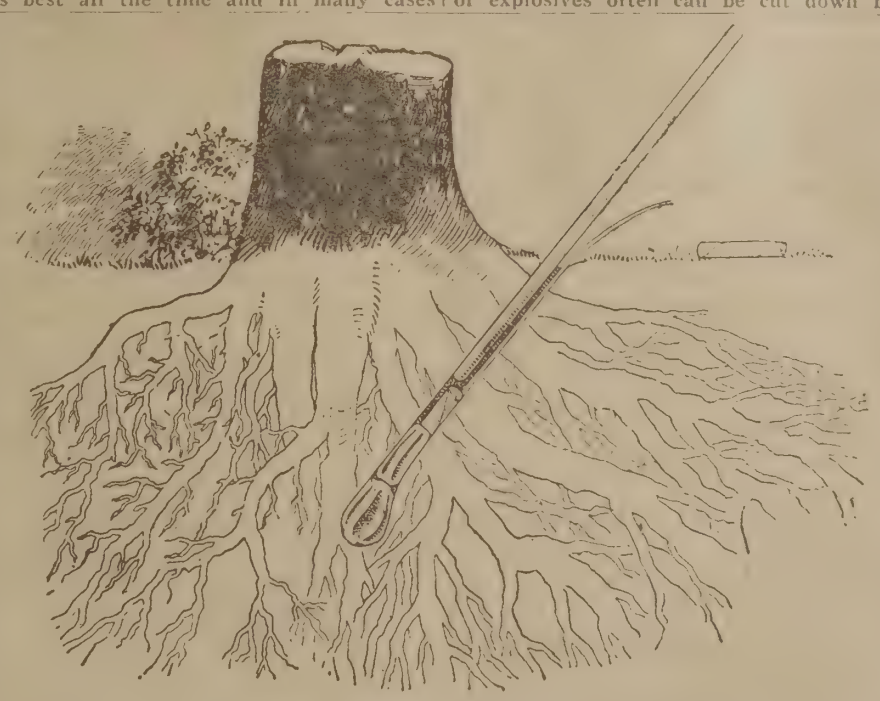
Some explosives are suitable for wet work and others only for dry work. Some are adapted to blasting on top rock, others to blasting ground only. Some freeze when chilled a little. Others can be exposed freely without freezing.

Blasting powder has been known and used for several hundred years and it is

(Continued on page twenty-two.)

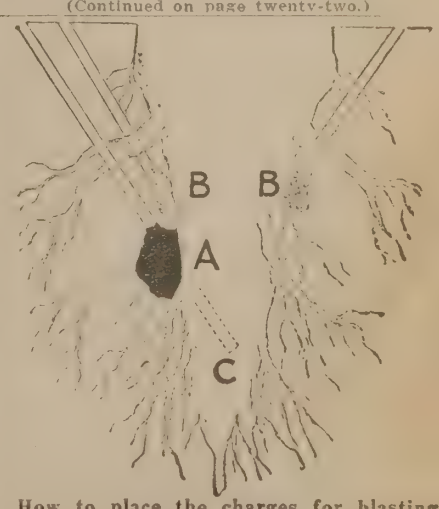
According to figures supplied by the Washington state bureau of immigration aid statistics, there are 3,974,250 acres of cut-over lands in western Washington, and 629,200 acres in eastern Washington.

Of the 3,974,250 acres of cut-over lands in western Washington, 2,026,200 acres are classed as agricultural land, 1,438,000 as grazing lands and 482,600 acres as probably subject to reforestation.



Of the 629,200 acres of cut-over lands in eastern Washington, 188,000 are classed as agricultural and 425,200 as grazing lands. This gives a total of 2,214,200 acres of cut-over lands in the state of Washington, which are classed as agricultural lands.

These figures show that the agricultural cut-over lands in the state of Washington make up considerably over 50 per cent of the farming lands now under cultivation in the state.



The agricultural cut-over lands in eastern Washington are largely in four counties, Pend Oreille leading with 70,000 acres, Stevens next largest with 65,000 acres and Klickitat and Spokane following, each with 20,000 acres.

Snohomish county leads all the counties in western Washington in cut-over agricultural lands, having 250,000 acres; Clarke and Grays Harbor counties each have 185,000 acres; King county, 160,000 acres; Lewis county, 152,000 acres; Whatcom, 150,000 acres. Kitsap, Mason, Pierce, Skagit, each have between 100,000 and 150,000 acres; Clallam, Cowlitz, Island, Jefferson and Thurston each have between 60,000 and 100,000 acres.

Eighty per cent of the cut-over lands in Clallam, Klickitat and Pierce counties are classified as suitable for agriculture, 75 per cent of the lands in Skagit and Whatcom counties; 70 per cent of Clarke; 60 per cent of Skamania and Snohomish; 50 per cent of Chehalis, Island, Lewis and Pacific; 45 per cent of Thurston; 40 per cent of Cowlitz; 25 per cent of King and Kitsap, and 20 per cent of Mason and Wahkiakum.

To show sticks of explosive expanded, as permitted by splitting of stick wrappings, in big hole.

How to place the charges for blasting out tap-rooted stump. Three methods are shown. "A" shows how to do it with one charge, using cap and fuse and not boring into the wood. "B" shows how to place two charges when electric blasting machine is available. "C" shows by dotted lines position of auger hole in wood where one charge could be placed to cut off the root and throw out the stump. Any one of three methods will do the work.

National Grange Master Writes an Epoch-Making Letter

In approving letters to Master S. J. Lowell of the national grange, Senators Poindexter of Washington and McNary of Oregon endorse his protest against a possible strike of coal mine workers and railroad employees. Mr. Lowell sent his protesting letter to 8000 granges and it is expected that it will be read in all of them this month. It is as follows:

The time has now arrived when it seems pertinent that the grange should express itself in no uncertain terms in protest of a possible strike of mine workers and railroad employees.

If the coal strike takes place, as seems possible, in April the production of the fuel, upon which the prosperity and well-being of millions depend, will cease. Although it is claimed that coal enough to last for a month or more is now above ground, any stoppage of production obviously will result in high prices in the near future. If railroad workers strike the transportation upon which the food of millions depends will stop.

A railroad strike now means the farmer's products remaining unsold and spoiling in his barns. And that may mean famine, suffering and perhaps death in the cities. It means farm supplies piled up in railroad yards while fields wait for seeds, fertilizer and machinery necessary to make them productive.

A strike in April at planting time wrecks a year's crop production plans.

A coal strike comes less directly home to our people than to the people living in the cities, but an obligation to help makes it clear that the interest of all, and not of a class or group, is paramount in this republic. It is none the less pressing because our interest in this is secondary and financial, instead of primary and vital.

If coal production stops people will suffer, and the spectacle of a comparatively small group of men and interests seizing the weapon of human misery and human suffering in order to impose their will, and their refusal to deal fairly with one another, and make others pay the penalty, is preposterous in this nation and time.

The decision of every member of the grange to do his part in building up an overwhelming public opinion for a fair and just settlement and the enforcement of such settlement to the utmost, will prevent any strike. Owners, workers and the government must feel the power of this public opinion.

No man or set of men in this country can succeed against a united public sentiment.

I want you to voice your protest against any owners or management of railroads, or owners of coal mines, or workmen in either, creating a condition that will stop the progress of our recovery from the terrible scourge of war, which we have just passed through, and express it in terms that will leave no doubt in any mind that we are in no way to be used to further the interest of either to the advantage of one over the other.

We are doing our part and it is not unfair for us to demand that both capital and labor do theirs. Whatever differences may exist between them must be adjusted without stopping the wheels of commerce.

I am expecting you, brothers and sisters, to take active interest in helping to promote the public sentiment that will bring this about. Whenever possible make every effort to have the opinion of your grange reported in the newspapers of your county, so that this protest against an impending menace may be widely noticed.

We are heartily in accord with the spirit and purpose of this righteous protest. There is no answer to Master Lowell's reminder that the American farmers are doing their part "and it is not unfair for us to demand that both capital and labor do theirs," and that "whatever differences may exist between them must be adjusted without stopping the wheels of commerce."

How to adjust those differences without stopping the wheels of commerce is one of the outstanding problems before the American people. Senator Poindexter of Washington has taken advanced ground on this great issue and some time ago introduced a bill to compel both capital and labor engaged in the operation of the railroads to submit their disputes to judicial determination.

The time is coming when that just principle will be written into the laws of this country and people then will look back and wonder at their long forbearance in permitting capital and labor to fight out their differences in transportation, coal mining and other vital industries where the rest of the nation must stand by and suffer incalculable losses. It seems all the more ridiculous when we stop to consider the elaborate machinery of courts that we have set up to compel individuals peaceably to adjust even their minor differences of a few dollars. We do not allow two individuals who have a dispute to go out and shoot up the town in trying to conquer each other. Then why do we permit organized capital and organized labor constantly to hold over the nation the danger and the threat of great strikes that would be almost as destructive as war?

So far as we can recall at this moment, the letter of National Master Lowell is the first emphatic protest to come from a great body of American citizens. We congratulate Mr. Lowell upon his foresight, his courage and the fair and thoughtful way he has taken to bring this tremendously important subject to the attention of congress and the American people.

Learn the Business First

"You should not give strong medicine to children in adult doses."

So says J. A. Scollard, president of the United Dairy Associations of Washington. He allows us to imply that it is all right to give strong medicines to grown folks in grownup doses.

When he made the above statement he was referring to the plan of cooperation adopted by the dairy associations of the six western Washington counties whose efforts are now coordinated in the association of which Mr. Scollard is president. He and his board of directors, when they were beginning their big fight in behalf of the dairy producer, went a little slowly on the matter of pure cooperation. They did not know everything that was to be known about the milk manufacturing and marketing business, and about cooperative enterprises in particular, and they knew they didn't know. Hence, they adopted a medium course. They put into effect what Mr. Scollard calls a "diluted" form of cooperation. They took in some outside capital and some outside experience to help them get started, though keeping at all times complete control in the hands of the producers.

The success that the United Dairy association has attained makes it worth while that other producers give their plan a thorough investigation before deciding upon the particular brand of cooperation that they will attempt to use.

The Place to Look

A prominent live stock man declared the other day that the place to find something was where you had lost it. He had in mind the possibilities of recuperation in the live stock industry.

Losses are often incurred in activities that should thereafter be avoided because of the unsoundness of the proposition itself. The live stock industry, however, is not one of that class. It is one of the stable and dependable industries of the country, year in and year out. Depression occasionally hits it, but the man who sticks through thick and thin and who conducts his business efficiently must inevitably win.

The live stock man above referred to was right in the statement he made. The man who, through no fault of his own, but as a result of the unfortunate conditions of recent months, lost money in the live stock business can do no better than to stay in it or get back in it if he is out. But it must always be remembered that this business, like all others, must be conducted conservatively and efficiently if profits are to be made.

State Farm News

Supported by a charter membership of 1200 and encouraged by backing assured from other communities in northwestern Washington, the Bellingham Tulip Festival association, organized on a nonprofit basis last year, has its plans well laid for this year's tulip festival, the third held by the city, on May 4, 5 and 6.

On the opening day a tulip show will be staged, and in the evening Queen Tulip will be crowned with elaborate ceremony. Following this feature there will be a grand ball. On the second day a tulip parade will be held, in which 30 or 40 floats are expected to appear. Prizes wil be given for the best floats as well as for the best displays at the blossom show, where any spring flower may be entered. The third day will be devoted chiefly to a carnival.

* * *

At a meeting held February 24 at the Odd Fellows' hall in Tenino a silver cup offered by Thurston county banks to the community placing the most purebred sires last year was presented to Tenino. L. H. Hubbard, cashier of the Tenino bank, made the presentation. C. M. Hubbard, Washington State college live stock specialist, also spoke. Seventeen purebred sires were placed in the Tenino district in 1921.

* * *

The Skagit County Live Stock association completed its organization at a meeting March 1 at Mount Vernon, adopting a constitution and electing officers. The following were chosen: President, H. S. Ruley; vice president, W. E. Jennings; secretary-treasurer, Iver Youngquist; directors, Dr. C. S. Philips, Mount Vernon; William Knutzen, Burlington and Olympia Marsh; J. M. Harrison, Sedro-Woolley; Aaron Snyder, Lyman; Nels Anderson, Sammish; James B. Hayton, Skagit island; A. J. Sennes, Conway-Fir; J. H. Hulbert, La Conner Flats, and J. A. Folsom, Beaver Marsh.

The association voted unanimously to request the county commissioners to obtain an agricultural agent for Skagit county.

* * *

Grays Harbor county fair will be held the week of September 4, according to S. K. Bowes, county commissioner, who attended the meeting of directors of the Northwest Fair association at Spokane.

* * *

Eighty-five stockmen and farmers who attended the organization meeting and first monthly banquet of the Columbia County Live Stock association at Dayton in mid-February pledged backing for the better sire campaign, boys and girls' club work and a proposal to reestablish the county fair, which has not been held in 13 years. A general live stock tour is planned for the early summer. C. J. Broughton was elected president; Henry Delaney, vice president; J. M. Lewis, secretary, and A. B. Burnett, treasurer.

* * *

Eggs produced and chickens raised last year in Spokane county were worth $750,000, according to County Agent Patton.

* * *

J. R. Martin of Satsop was elected president of the Grays Harbor County Jersey Breeders' club at its annual meeting at Monesano February 20. Parker Askew of Wynooche valley was chosen vice president; E. E. Hale of Montesano, secretary-treasurer, and E. L. Brewer of Satsop, J. H. Taylor of Wynooche valley and Merritt Twidwell of North River valley, directors. On the following Friday the members went in a body to the Warren Lincoln farm, near Shelton, for an inspection of the Lincoln herd.

* * *

A pig club of 11 members at Lind, financed by the First National bank, is the largest of four new ones recently formed in Adams county with a total of 27 boys and one girl enrolled. County Agent N. C. Donaldson is organizing them.

* * *

Governor Hart told Walla Walla men when he was there recently that the jute mill at the state prison will not be started again, as making of grain sacks has not been profitable. Large quantities of them are still on hand and can not be sold at less than cost before June 1, when it is permissible under the state law to sell them in open market. Warden Potts stated that there are 889,159 sacks on hand.

* * *

A farm bureau center was organized in the Willow Lawn district March 7, says a Yakima report. J. W. Andrews was elected chairman; Clarence Rusk, secretary; Anton Carlson, project leader in horticulture; J. A. Roberts, dairying; John Yule, farm crops; Webb Hallowell, live stock; E. L. Spring, poultry.

* * *

The spring poultry school, made necessary by the large number of applications for the winter school which could not be accepted, opened at the western Washington experiment station at Puyallup March 5.

The course will last six weeks and will cover virtually the same ground as that covered by the winter class, which recently closed its work. However, due to the season of the year, the spring class will be able to spend much more of its time with baby chicks in practice and observation than was possible with the winter class.

Professor George Shoup, head of the poultry department, has sent out word that the practice course is filled to capacity and that others desiring to study the poultry business at the spring term will be enrolled in the observation class. This is to be the last poultry course to be scheduled until January of next year. The major portion of the class is made up of women.

The school is under the direction of Professor and Mrs. George Shoup, with Dr. W. T. Johnson, poultry surgeon, assisting.

Coming Events of Interest

March 28—Water power hearing, Spokane.

The following schedule, in which the state college extension division and farm bureau are cooperating, has been arranged for squirrel poison mixing demonstrations in Whitman county: March 24, Endicott; March 25, Colfax; March 27, Garfield; March 28, Palouse, March 29, Oakesdale; March 30, Tekoa; March 31, Farmington; April 3, Thornton; April 6, Rosalia; April 7, Pine City; April 10, Colton; April 11, Pullman; April 12, St. John; April 13, Steptoe; April 15, Fairbanks.

April 5—Pierce county poultry meet.

April 5-6.—Okanogan live stock meet-sale, Okanogan.

April 15—Stock show and mock sale, W. S. C., Pullman.

May 4-6—Tulip festival, Bellingham.

July 27-28—Whatcom co. Guernsey gallop, Bellingham.

April 16—Easter.

FARM BUSINESS AND MARKETS OUTLOOK

Advance in Cattle Market Interrupted

The advance in the cattle market, which averaged 15 cents or more per week since late in December, has been interrupted and a loss of 40 to 75 cents sustained in the last few days. Supply at the leading markets increased, due probably to the fact that tax assessment day is on the horizon.

Nevertheless, the position of the market is believed to be strong and moderate advances later on are expected. The east has been a liberal buyer at middle western markets, exporters are buying 400 or 500 head per week at Chicago and the Pacific coast is buying killing cattle in the southwest.

Dressed beef prices have not lost ground.

Demand for stockers and feeders remains fairly uniform, shipments from the 12 leading markets totaling around 50,000 head per week. Values have been marked up consistently with the advance on killing grades and there has been a disposition to turn to stocker steers and stock cows in order to avoid high costs. Total shipments from the 10 leading markets during January and February were 373,000 head, an increase of 37 per cent over last year. In the southwest high prices are being asked for steers to be moved to northern pastures and the pilgrimage may be a light one. At the same time rains in Kansas, Oklahoma, Nebraska and Texas have revived grass in that section and increased the demand.

Hog Market in Setback

The hog market has weakened decidedly in the last few days, due mostly to a top-heavy condition. A decline of $1 per 100 pounds has occurred. Average weights have advanced, so that the yield of meats and fat has risen without any material increase in the run. The fresh pork market has not declined, so that the decline may not go much farther unless receipts expand.

Packers are still balking at the price of hogs, although obliged to buy enough to supply their fresh meat trade. Eastern shipping demand has been less active during the last two weeks. On a statistical basis, the market outlook is fairly strong and promises to remain so until the increase in production now taking place begins to affect market supply.

Sheep Men in Strong Position

Measured by the reduction in the sheep population and by the probable number of lambs on feed to be marketed during the next three months, sheep and lamb feeders are in a stronger position than producers of cattle or hogs. The market has been unsteady during the last two weeks, but feeders are able to shut off the supply on declines and dressed lamb prices remain at practically the high point of the year, so that the market is kept in a fairly healthy condition. If the rest of the winter crop of fed lambs is put upon the market gradually no serious decline should occur until southwestern lambs begin to move in the latter part of May.

Tone of the horse markets improved during the last week, due to an increase in the number of buyers for the farm trade and also to slight improvement in city demand. At a Chicago auction 1200 head were disposed of with prices $5 to $10 higher.

Mills Are After Wool

Although wool markets are quiet, mills are showing more interest than when the speculative fever was at its height and prices remain near the topmost levels. High-class foreign wools especially are scarce and the total supply of all kinds in the United States is less than usual. Contracting of the new clip in the west has ceased, as a deadlock over prices has developed. The asking price for fine and fine medium clips on the order is about 40 cents. Only a small quantity of new wool from the southwest has been shipped thus far, although that section usually consigns early. Foreign wool prices are about 5 per cent lower than in January, but the London auction has become firm and the foreign outlook is for steady prices.

The American Woolen company, which was the leading buyer at the government auction, is said to have sufficient orders for cloth to keep its mills going into the summer and the woolen goods market has improved slightly.

Mohair Price is Fixed

An opening price of 26 cents a pound has been fixed by Portland dealers for the new mohair clip. This price will hold until the market adjusts itself and actual values can be determined. The 26-cent quotation is on long staple mohair, delivered at Portland, tags and inferior fleeces out at value. Short staple six-months mohair is quoted at 18 cents.

Shearing started in western Oregon recently, but was stopped by rain before much was taken off. If the weather is favorable there should be active shearing in the coming week.

Dealers do not look for an advancing market this season, but the mohair trade is frequently more or less erratic and country buyers are disposed at times to bid more for hair than they can later realize on it.

The traders base their opinion of the probable future of the mohair market on the course of wool prices to date, the sharp advance in the commodity having been succeeded by a period of reduction which, if it has not left the market lower, has at least produced an uncertain condition.

Light Wheat Carryover in Prospect

An analysis of current wheat figures shows that stocks on farms and in the visible supply on March 1 were only 172,414,000 bushels, compared with a 10-year average of 209,478,000 bushels. About 16,000,000 bushels more wheat have disappeared into domestic and export channels since July 1 than the 10-year average for that period. The quantity of wheat remaining on farms and in the visible supply for use in the next four months is less than the quantity which disappeared from those sources in the corresponding period of 1921 and is only 14,000,000 bushels more than the 10-year-average disappearance, thus forecasting a small carryover at the end of the crop year.

Net exports of wheat and flour in the last four months of the crop year have averaged about 63,000,000 bushels in the 10-year period. They are almost certain to fall below that figure this year, but the foreign outlook indicates that enough will be taken to leave less than an average carryover. This indication will be further strengthened if country mill and elevator holdings on March 1, not yet reported by the department of agriculture, should prove to be below the 10-year average of 102,000,000 bushels.

The domestic wheat situation appears to be a tight fit and the same is true abroad. Undoubtedly the world is consuming more wheat this year than was grown during the year. With no reserve stocks to draw upon in the coming year, production must be increased or severe shortage will result.

Corn and Oats

Although farm stocks of corn are still the largest on record with the exception of last year, when they were 251,000,000 bushels greater than this year, yet if corn disappears as rapidly in the next eight months as it did in the same period of 1921, all of the big surplus which depressed the market last fall will have faded away, so that only a normal quantity will be left to carry into next year.

Farm reserves of oats were 404,000,000 bushels, compared with a 10-year average of 497,000,000 bushels, but the visible supply is of record size, so that the total supply for the rest of the crop year is only about 45,000,000 bushels less than the average. Although the quantity of oats available until August 1 is nearly 50,000,000 bushels less than the disappearance in that period last year, it is 54,000,000 bushels more than the 10-year average, promising a fair carryover at the end of the season.

A comparison of the data for this year on each grain, last year and the 10-year average follows:

WHEAT.

	1921-1922.	Bushels— 1920-1921.	10-Yr. Avg. 1911-1921.

Decline in Grains Near Close

Grain prices have declined sharply during the last two weeks. Wheat values at the low point were 10 to 20 cents lower and the corn market was over 10 cents a bushel below the high point of the season.

Rains in the southwest have relieved drought in that section and crop reports are favorable. Large shipments of wheat from the Argentine and Australia, made since the first of the year, are nearing European ports, so that the foreign stampede to buy nearby wheat from North America has ceased and the decline has stimulated more or less reselling abroad by uneasy buyers.

The Argentine is clearing about 5,000,000 bushels per week and has shipped 36,000,000 bushels since January 1, or one-third of her estimated surplus. Australia is estimated to have 50,000,000 bushels left for export, of which 20,000,000 bushels are already sold.

Export buying was brisk on the decline in the corn market. Extensive purchases were made for Russia, both directly and through the relief organization. The continent also was a big buyer. White corn has advanced to a premium of 4 cents above yellow corn, due to export orders for corn grits. The exportable surplus of corn from the new Argentine crop is estimated at 108,000,000 bushels, or only two-thirds as large as that of last year.

The world's wheat situation shows no great change. There is no actual scarcity in this country and the temporary shortage in Europe has been relieved for the time being. The close adjustment of supply and demand may not be demonstrated until later on.

Cash grain markets:

The range of cash grain prices for the week ending March 15 was:

Chicago Wheat No. 3 red, $1.30@1.37 1-4; No. 2 hard, $1.29@1.35 1-2.

Corn—No. 2 mixed, 55 1-4@58 1-2c; No. 3, 54@57 3-4c; No. 4, 53@56 3-4c; No. 2 yellow, 55 1-2@59c; No. 3, 54 1-2@57 1-2c; No. 4, 54 1-2@56c; No. 2 white, 59@63c; No. 3, 57@60 1-2c; No. 4, 57@59 1-2c.

Oats—No. 2 white, 37@40 1-2c; No. 3, 33 3-4@39c; No. 4, 33@35 1-2c.

Rye—98 1-2c@1.02 3-4.

Barley—60@69c.

Seed, Feed and Hay

Receipts of clover and grass seed are running light and shipments from distributing centers are large, so that prices are holding well. Receipts of clover seed at Chicago since August 1 have been 10,931,000 pounds, compared with a three-year average of 10,032,000 pounds. Shipments from the same point were 7,819,000 pounds, compared with a three-year average of 5,630,000 pounds.

Toledo, per bushel—Prime red clover, $16.15; prime alsike, $11.75@11.85; prime timothy, $3.15.

Demand for most feedstuffs is quiet, particularly at eastern points. In the south pasture is already a factor in the demand. The prosperous hog market is maintaining a good outlet for middlings and tankage. Supplies are ample, with the exception of linseed meal. Corn industries are operating nearly at capacity. Flour mills have increased operations recently and are offering wheat feeds at slightly lower prices.

CHICAGO—Bran, $28; standard middlings, $29; flour middlings, $32.50; cottonseed meal, 36 per cent, $46.25; 43 per cent, $50.50; hominy feed, $22.50; gluten feed, $32.65; old process oil meal, $54.50; tankage, $60.

Receipts of hay at distributing markets have been light and prices have held firmly. Timothy prices are about $1 per ton higher. Alfalfa also has advanced slightly. Storms have increased the demand in some sections and have curtailed shipments. When these conditions pass, the advance may not be sustained, as pasture is gradually becoming available.

CHICAGO—No. 1 timothy, $22@24; standard, $20@21; No. 2, $19@20; No. 3, $14@17; No. 1 light clover mixed, $21@22; No. 1 clover, $17@20; No. 1 clover mixed, $18@20; No. 1 alfalfa, $15@26; upland prairie, $11@15; midland prairie, $10@13; rye straw, $13.50@14.50; oat and wheat straw, $9.50@12.50.

Egg Market Near Bottom

The egg market is apparently not far from its low points for the spring season. At Chicago fresh firsts sold as low at 21 1-2 to 22 cents during the last week, although the close was on a small upturn. The movement into storage has begun, as there are some operators evidently who believe that these levels are safe. In the spring of 1921 the lowest price paid for fresh firsts was 21 1-2 cents late in April. From this point the market advanced to 55 cents early in December. The supply of eggs in cold storage in tthe United States on March 1 had been cut down to 12,000 cases. Average holdings on March 1 during the last five years have been 25,000 cases.

Poultry prices have declined slightly in the last few days. Receipts of dressed poultry at the four leading cities since January 1 are practically the same as during the corresponding period of 1921. The supply in cold storage is still large, but is being cut down rather rapidly.

Butter and Cheese

Although receipts of butter at the leading markets are gradually increasing and are now running substantially ahead of those of last year, prices more than recovered a small loss during the early part of last week. Confidence in the maintenance of prevailing values for a little while longer has been more general, due to the passing of conditions which prevented shipments from producing sections. Although the supply of fancy fresh butter has been light, due, it is said, to local demand, which has absorbed all of the product of some creameries, the supply in the southwest especially is light and this section is drawing upon the outside. Production reports from creameries indicate a gradual increase in the make. Demand, however, is very broad at the present level of prices.

The preliminary report on cold storage holdings of butter in the United States on March 1 was 22,562,000 pounds, compared with a five-year average of 21,924,000 pounds.

The cheese market has been somewhat irregular, with twins and longhorns very firm, daisies draggy and other styles about steady. The general tone of the market has improved as demand has broadened. Higher prices upon cheese are not generally expected, nor are severe declines probable during the next few weeks. The supply of fancy held cheese is light and all markets report firm prices upon it.

Fruits and Vegetables

Under heavy shipments from producing sections the potato market has weakened recently, with northern round whites quoted down to $1.60@1.80 at Chicago. Northern sacked round whites at shipping points are quoted at $1.45 to $1.57, while sacked Rurals in wagonloads are quoted at 70 to 90 cents per 100 pounds at Idaho and Colorado shipping points.

Bulk of apple receipts are boxed stock, Oregon, Washington and Idaho furnishing about nine-tenths of the current supply. Prices are steady, with extra fancy Winesaps bringing $3 to $3.50 per box in consuming markets.

Coordinate Grain Marketing

New Organization Will Sell a Hundred Million Bushels

At meetings in Denver plans were worked out for a federation of 10 state grain marketing association, controlling at the present time more than 75,000,000 bushels of pooled wheat.

The combination as planned will absorb the Northwest Wheat Growers, Associated, and the National Wheat Growers' association. The Northwest Wheat Growers, Associated, comprises the four statewide wheat marketing associations in Oregon, Montana, Washington and Idaho. The National Wheat Growers' association includes legally incorporated bodies in Oklahoma, Kansas and North Dakota and other associations now in process of formation in Texas, Nebraska and Colorado.

The total present membership in the 10 states named is slightly in excess of 35,000 farmers, all of whom grow wheat and all of whom have already signed legally binding contracts under which all the wheat they grow is pledged to be marketed through their own associations, on a completely pooled basis, for a five-year period.

Continuing membership campaigns in the 10 states are expected to bring the total membership to more than 50,000 and the total amount of controlled wheat to more than 100,000,000 bushels before July 1 of this year.

Negotiations sponsored by Carl Williams of Oklahoma and others have been under way for several months looking toward the federation of these various organizations. The result was an official call issued by George C. Jewett, representing the Northwest Wheat Growers, Associated, for a meeting of delegates from all similar wheat marketing associations, to be held in Denver on March 1. Representatives of the United States Grain Growers, the great cooperative commission sales agency at Chicago, were also invited to the meeting, though on account of differences in their plan of organization from that of the pooling organization no common ground for a federation with them could be found.

Means Big Sales Organization.

The plan as outlined for the new federation proposes no change whatever in the corporate forms of the existing state associations. It merely unites them in a gigantic sales organization which will cover practically all of the surplus wheat producing sections of the United States.

The nation will be divided into sales zones according to markets. All state associations chiefly patronizing the same market will be included in the same zone. State organizations may select the zone to which they wish to belong. At present it is probable that four zones will be created. Zone No. 1 will probably include the state associations of Oregon, Washington and Idaho. Zone No. 2 will cover Montana and North Dakota, with other spring wheat states yet to be organized. Zone No. 3 will doubtless include Kansas, Nebraska and Colorado and zone No. 4 will take in Oklahoma and Texas. Each state association will have two trustees on the zone board, with proportionate additional representation for states having more than 10,000,000 bushels of wheat under contract. One of the zone trustees from each state will be named as the state's member of the board of directors of the national organization, which is to be known as the American Wheat Growers, Associated.

Pools will probably be created by zones, and the some boards will have full detail control of sales under the general supervision of the national board. The latter will function directly for all the participating states in matters of finance, legal advice, field organization work, statistics and information, export sales, auditing and office management and general control of domestic sales in all zones.

Details of the general plan, which was unanimously agreed upon at the Denver conference, were further whipped into shape at a meeting in Kansas City on March 9, and were turned into legal form for final submission to state boards of directors at a committee meeting held in Chicago on March 20, which was attended by George C. Jewett of Oregon, Aaron Sapiro of California, W. C. Lansdon of Kansas and Dan G. Murley and Carl Williams of Oklahoma.

Northwest Pioneered the Way.

The Northwest Wheat Growers, Associated, comprising the states of Oregon, Washington, Idaho and Montana, has been in existence as a going farmers' organization for the last three years. It is actually handling this season about 20,000,000 bushels of wheat.

None of the state wheat growers' associations in the central west have as yet handled any pooled wheat, but all of them are preparing to do so in connection with the 1922 crops. The Oklahoma Wheat Growers' association, of which D. G. Murley is president and John Manley secretary, has 7,500,000 bushels pooled. The Kansas association has 11,000,000 bushels and the North Dakota association 10,000,000 bushels. Other central states have smaller amounts.

The basis on which all of these organizations work is that, to be effective in stabilizing prices and in properly merchandising the crop, the disposal of a large volume of wheat must be directed by a single agency or set of men. The larger the volume the greater the chance for success. The new organization has a prospect of going into the 1922 wheat season with from 12 to 15 per cent of the wheat crop of the United States under contract.

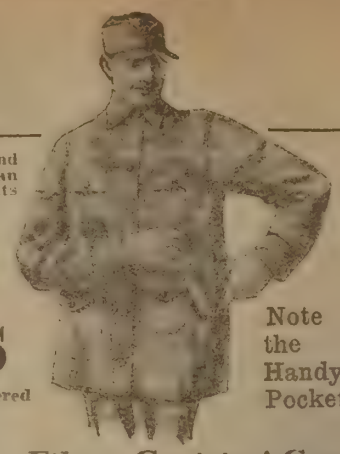
The name of Mr. Jewett, manager of the Northwest Wheat Growers, Associated, has been suggested as manager for the new national organization. Reports from the east say that he will take over the duties, but no confirmation has been received in the northwest up to this writing, and those closely associated with him here appear to doubt the likelihood of his becoming national manager.

Bishop Heads Holstein Association

Members of the Washington State Holstein-Friesian association at their annual meeting in Seattle March 7 made slight changes in their constitution and elected officers for the coming year.

The feature of the meeting was the election of officers, which placed William Bishop of Chimacum at the head of the association as president. As vice president the delegates unanimously chose Harold Stimson, son of the late F. S. Stimson, who held the office of president at the time of his death. A. B. Winters of Everett was chosen as treasurer.

A few changes were made with the executive board, the new board being as follows: E. A. Stuart, Seattle; John L. Smith, Spokane; H. C. Davis, Granger; A. E. Smith, Sumas; Alex. Todd, Yakima; T. G. Lockhart, Mount Vernon, and H. R. Sholtes, Adna.



In changing the bylaws of the constitution the delegates decided to shift the financial burden of the association to the herds rather than on the owners of cattle by assessing graduated yearly dues, which are levied according to the number of animals in the herd. In place of the usual dues of $5 per year the new ruling reads that each member pays $5 as life membership dues with $2 additional for each animal up to 25, $2.50 for numbers under 50 head and $3 per head for herds of 100 head and over.

A report of the credentials committee was adopted, which favored the work of the extension department of the state college in its eradicationof the scrub sire and recommended that members of the association give any assistance possible in placing a purebred sire wherever one can be used to a better advantage.

A reduction in the number of delegates was made by allowing for one county delegate out of every 10 members instead of one out of every five, as has been the case in the past. The regular meetings of the association in the future will be held early in the months of February and September.

ASSOCIATION REDUCES FEES.

At the recent annual meeting of the Snoqualmie Valley Cow Testing association the yearly fee was reduced from $2.50 to $2.25 per cow. E. W. Trezise of Tolt was reelected president and L. J. Clark of Bellevue will be the secretary for the ensuing year.

U. S. and Canadian Patents

Only $6 Delivered

Note the Handy Pocket

The Filson Cruising Coat

Is just the thing to use about the tractor. It is tight at the sleeve and closed at the throat. The big back pocket keeps the wrench handy.

It affords maximum protection in all kinds of weather. Made of Filson quality shedpel khaki, double shoulders and sleeves. It is water-resistant and windproof. Price $6, delivered.

Our catalog No. 9 shows many garments that are valuable in the out-of-doors. It's free.

FORDSON TRACTORS REDUCED $230

NOW $895 F.O.B. DETROIT

Saw Wood, Pull Stumps, Harrow, Plow, Disk, Thresh, Grind Feed with this "Perfect Hired Man"

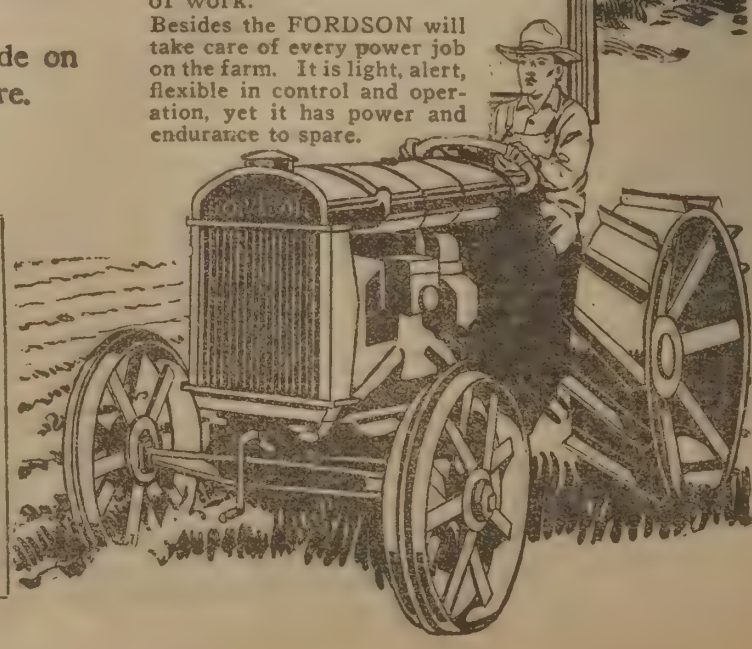
The Northwest Ford dealers of Washington, Montana and Idaho are glad to announce that it is now possible for every FARMER TO OWN A TRACTOR

Free demonstration

See the Fordson at work!

The nearest dealer will gladly make a free demonstration.

THE NEW PRICE



puts the sturdy, reliable FORDSON within the reach of all.

Terms of payment can be made on application. Write for literature.

One man with a FORDSON TRACTOR can do more work easier and with less expense than two men can do with horses. This means that you with a FORDSON TRACTOR can actually raise more crops, with less work and less expense. And this means that your profits will be greater with fewer hours of work.

Besides the FORDSON will take care of every power job on the farm. It is light, alert, flexible in control and operation, yet it has power and endurance to spare.

Delay Action on Marketing Plans

Aside from the election of officers and the selection of an executive committee, little official business of importance was transacted at the meeting of the Skookum Packers' association at Wenatchee last week, according to the official statement given out by the officers following the meeting.

It is understood that the relationship between the association and the Northwestern Fruit exchange is no different than it has been for several weeks, notwithstanding that it was expected that action would be taken either confirming or withdrawing the action already taken by local units of the Skookum packers as the first step in cancellation of their contract with the Skookum association.

All of these locals have filed notice of such cancellation and, so far as is known at this writing, only one, that at Wenatchee, has rescinded that notice. They have until May 1 to complete the cancellation or to continue their membership throughout the 1922 season.

As previously stated in THE FARMER, the Skookum association is made up of local fruit growers' cooperative associations, the greater number of which are in the Wenatchee territory. These local associations have membership contracts with the Skookum Packers' association, one provision of which is that they may cancel their membership any year provided notice of such cancellation is given 60 days prior to May 1 of that year. These notices of cancellation are the ones above referred to. In turn, the Skookum Packers' association has a five-year contract, with four years yet to run, under which it sells all of its fruit through the Northwestern Fruit exchange, the marketing organization in the Pacific northwest representing the J. S. Crutchfield interests of Pittsburgh. Fear of what they believed to be a growing domination of northwestern fruit marketing by the eastern interests, as represented by Mr. Crutchfield, is given by the growers as their reason for considering marketing through other channels.

According to the statement given out by the officers of the Skookum Packers following last week's meeting, the following officers were eleeted and the following business transacted:

President, I. H. Logue of Pateros; first vice president, C. W. White of Peshastin; second vice president, A. F. Munson of Sunnyslope; secretary and treasurer, Miss Grace Lamphere; general manager, J. A. Warman.

The following exeeutive committee was chosen: C. W. White of Peshastin, A. F. Munson of Sunnyslope, J. W. Terry of Yakima, F. H. Phipps of Brewster, B. W. Johnson of Monroe, Ore., and B. M. Martin of Entiat.

A resolution was adopted by the board of trustees authorizing the disbursement of about $10,000 of the assets of the association among the various local units. There was a surplus of about $17,000 left over from the last year's operations and a portion of this will be returned to the units.

A resolution was so passed directing the general manager to abandon the Seattle office of the association and consolidate the business of the association in the Wenatchee office.

The following trustees were present at the meeting: Okanogan, H. J. Kerr; Omak, H. M. Holmes; Brewster, F. H. Phipps; Pateros, I. H. Logue; Entiat, W. S. Trimble; Sunnyslope, A. E. Munson; Cashmere, H. J. Olive; Peshastin, C. W. White; Leavenworth, J. B. Adams; Chelan, C. M. Wild; Yakima, J. W. Terry; Monroe, Ore.; B. W. Johnson; Wenatchee, O. T. Clawson; Kennewick, Frank Craver.

Shorthorn Sale

Dunn Bros.' Third Annual Event

The third annual Shorthorn sale of the Dunn Brothers was held at the ranch of Dunbro March 16. The bidding was somewhat more responsive than a years ago. Practically all of the purchasers of stock paid cash and very few notes were taken. The distribution of the stock was fairly wide, some animals going to Montana and eastern Washington and several head to the West Side. This year quite a few men who are beginners as Shorthorn breeders were at the sale to get foundation stock.

While stock of Dunn breeding made up the bulk of the sale, other Yakima breeders participated in it, including I. L. Jones of Sunnyside, J. E. Forsell of Grandview, H. O. Wicks of White Swan, Jones & Boose and Earl Mulhall of Grangeville, Idaho.

The total of the sale, comprising 39 heads, was $6305, with an average for the Dunn stock of $214, according to Guy Finlay, clerk of sale. The heifers sold at much higher prices than the bulls, the average price of the heifers being $36 above that of the bulls.

The sale was topped by a young bull, Sunny Boy, at $300, the purchaser being F. J. Taylor of Sunnyside. Two heifers brought $285 each, one going to Dr. R. E. Pearce of Granger and the other to Thomas McKeenan of Ellensburg, this being the top price of heifers. The auctioneers were George R. Gouchnour of Sunnyside and Sandy Keith of Davenport, Wash. The record of the sale is as follows:

Dunn Brothers Bulls.

Bulls consigned by Dunn Brothers—Village Pride, Lester Pearne, White Swan, $155; Lawson, John E. Sawyer, Wapato, Wash., $195; Queen's Cup, F. W. Bruce, Yakima, R. 4, $205; Watch Me Too, George Siegle, Toppenish, $140; Butterfly's Cup, Ervin Wallace, Mt. Vernon, Wash., $145; Cumberland Clip, W. R. Robbins, Toppenish, $155; Standard Bearer, P. J. Lyons, Yakima, $160; Barbara's Cup, H. O. Wick, White Swan, $210; Escana Star, Lester Pearne, White Swan, $120; Cup's Star, D. B. Jeffries, Ellensburg, $165; Sunny Boy, F. J. Taylor, Sunnyside, $300; Dora's Laddie, R. L. Simpson, Grandview, $130.

Heifers consigned by Dunn Brothers—Secret Bow, W. L. Hartman, Nisqually, Wash., $215; Mildred Gentry, Dr. R. E. Pearce, Granger, $285; Sarah Birthday 2d, J. H. McCroskey, Dayton, Wash., $180; Sunny Fly, W. L. Hartman, $195; Sweet Maid, Thomas McKeenan, Ellensburg, $285; White Butterfly, Dr. R. E. Pearce, $245; Princess of Dawn, D. B. Jeffries, $200; Charity Girl, Bert M. Wicks, White Swan, $155; Escana Maid, S. Woodhouse, Ellensburg, $245; Bonnie Mildred, S. Woodhouse, $140; Pride of Washington 2d, D. B. Jeffries, $200.

Grandview Consignments.

Bulls consigned by J. E. Forsell, Grandview—Skookum Beau, Carl Huntley, Wisdom, Mont., $120; Marcus Cumberland, Isaac Van Nostrem, Bickleton, $180; Roan Knight, bull, consigned by Jones & Boose of Sunnyside, $140. Butterland, bull, consigned by Taylor Brothers, W. A. Swartz, White Swan, $160. Grace 7th, cow with calf at side; consigned by Jones & Boose Phil Adams, Ellensburg, $115. Red Belle, cow with calf at side, consigned by Jones & Boose, Phil Adams, $155. Willow, cow with calf at side, consigned by I. L. Jones, Grandview, Lyle Heffron, Sunnyside, $165.

LYNN'S ROYAL DESIGNER.

John F. Lynn & Son of Peach, Wash., purchased recently from D. C. Lonergan & Sons of Omaha, Neb., the Poland China boar, Lynn's Royal Designer, and not Lynn's Royal Designator, as stated in a recent issue of THE FARMER. This boar was sired by Designer, grand champion of the breed at the Nebraska state fair in 1921.

NEW YAKIMA COUNTY AGENT.

S. B. Nelson, director of the state college extension service, has announced the appointment of A. E. Lovett to be county agricultural agent in Yakima county to succeed R. B. Coglan, who recently resigned.

For Ironing

For Water Heating

THAT'S precisely what you can have—with a Colt Lighting-and-Cooking Plant! *Artificial gas* that produces the most marvelous light known to science—a light many times brighter than that given by gas as used by city-folk; a light so near to sunlight it has coaxed hens into laying and vegetables into sprouting. . . .

Gas that makes the hottest of cooking flames—boils coffee in four minutes by the watch. So clean you can draw a silk handkerchief across the bottom of a pan and not soil it. No odor while burning. No matches necessary to ignite it.

Gas for lighting home, barn, driveway and outbuildings.

Gas for cooking.

Gas for ironing.

Gas for water-heating.

THIS gas is Carbide gas, and the simple Colt machine makes it for you automatically—when you need it, and only when you need it. Starts and shuts off supply automatically.

Colt Plant Simplicity Itself

The Colt generates this wonderful gas by mixing carbide with plain, ordinary water. It does all the work itself—there is nothing to get out of order. No expensive unit requiring replacement in short period of time. The gas is yours at the twist of fingers. And carbide is readily obtainable from warehouses at all convenient points. There is no waste. Even the residue makes excellent fertilizer and whitewash. Easily installed, and the cost is astonishingly reasonable.

More Than 341,000 Have Own Gas Well

Carbide lighting and cooking is not a new-fangled, untried idea, the dream of a visionary. You will find it on more than 341,000 farms and country estates. Owners are enthusiastic about it. It makes their home stand out in the community. It makes it more valuable, more cheerful and more comfortable. It drives out the sweltering coal range—the dangerous, messy oil lamp that imperils eyesight and home. Chases drudgery. Brings sunlight wherever wanted.

Get Full Facts—Mail Coupon

You will want a Colt "Gas Well" once you are told the full story of the joy, comfort and convenience it brings—the utter simplicity and do-the-work-itself operation of the machine. Mail the coupon below. It will bring you a wonderful and amazing story. Send it today—NOW.

How to Prevent Sore Shoulders

By DR. E. E. WEGNER, Dean of the Department of Veterinary Science, Washington State College.

Just at this time of the year, when many horses are being taken out for the work of the spring season, there is great danger of injuring their shoulders, as the shoulders have become soft and are easily injured when the pressure of the collar is applied steadily for hours at a time.

Dr. Wegner.

The principal reasons for the injury to the shoulder are the following: First, unequal distribution of weight on the collar bed. This may be produced by an ill-fitting collar or a collar pad that is old and bunchy and no longer of even thickness or it may be the result of the long hair on the shoulders becoming wet with sweat and rolling up in bunches under the collar, causing too much pressure at some one point. Whenever this excessive pressure occurs at any point the tissues are bruised at that point and a sore is almost certain to result. Then in some cases the moisture or sweat under the collars soaks the hair and collar pad, and this in constant contact with the skin in time scalds the skin and causes soreness.

Hames Must Be Properly Placed.

Hames are sometimes let down too low or too near the point of the shoulder. This does not spread the weight of the draft over a sufficiently large area and bruises the small area over which the weight is disfributed. Sometimes one trace is longer than the other and places more weight on one shoulder than the other, causing injury that might easily be prevented. Young and inexperienced animals sometimes do not pull straight in the collar; but pull sideways in the collar, causing unequal distribution of weight and a resulting injury.

Dirty collars or collar pads are also a frequent cause of soreness. They should be cleansed at regular intervals. I have seen pads taken from the shoulders of an animal that had sore shoulders and placed on the shoulders of a well horse and cause soreness of the shoulders of the second animal by infecting the skin of the healthy animal. Pads that have been badly soaked with infectious materials from wounds of the shoulders should be well cleansed before they are again used on healthy animals.

Pads Sometimes Harmful.

The collars should fit well and the hames should be so adjusted that the draft is relatively high on the shoulder. Collar pads should be omitted, if it is possible to get along without them, as they are a menace to the health of the animal's shoulder, since they absorb the moisture and collect the dirt more readily than the bare leather of the unpadded collar. Nothing is better for the horse than a plain, well-fitted, leather collar.

The shoulders may to advantage be clipped before the animals are put to work; this removes the long hair and prevents the balling up and accumulation of dirt and sweat in this matted hair. The mane should be left long ordinarily, as the stiff hairs when cut short may be turned inward by the weight of the collar and cause a great deal of irritation at the top of the neck. Care should be exercised, however, to see that the mane does not bunch up under the collar.

Keep the Shoulders Clean.

Cleanliness is of greatest importance and it is well to wash the necks and shoulders of the animals when they have been at work in the dust and heat. Plain water, to which a teaspoonful of salt has been added to each pint, makes as good a wash as one can well prepare, and if this is used after each day's work and the collar given attention to see that it is clean, the danger of soreness of the shoulders is greatly reduced. It is well to pass around in front of a team whenever they are stopped to rest and to raise the collars from the shoulders and admit the air to the skin and to rub off the moisture and dirt that has collected there and to lay the hair straight again. These simple attentions at frequent intervals are very necessary to the welfare of the shoulders.

Cleanliness with well-fitting collars and common sense and humane care of animals that must do the work is not expensive and will make the lot of the working animal much easier to bear. Sore shoulders are usually the result of neglect and carelessness.

In a second article on this subject Dr. Wegner will discuss the treatment of shoulders that have already become sore. —Editor.

Hold Mock Sale April 15

April 15 has been set as the date for the annual show and mock sale of the "All-Ag" club at Washington State college, and Manager E. E. Mundy of Ellensburg is already deep in plans for making it successful. The affair gives students an excellent opportunity to prepare cattle for the show and sale ring and to judge their values, and in addition it is the occasion of an annual intermingling of live stock students of the college and live stock breeders of the state.

Officers for the show are Harold Sorenson of Ellensburg, head of department; Fred Adams and Clarence Anderson of Seattle, editor and assistant editor of the catalogue; Cecil Compau of Walla Walla and Charles Averson of Centralia, business manager and assistant of the catalogue; Ralph Gillespie of Pullman, banquet; G. O. Baker of Clarkston, grounds; Ralph Singleton of Sweetwater, Idaho, prizes; Lorraine Boggs of North Bend, judging; Robert Bucklin of Port Blakely, publicity.

JERSEY COMES FROM CONNECTICUT.

Sybil's Gamboge Pearl is a beautiful little Jersey heifer that journeyed all the way across the continent from Hartford, Conn., to Bellingham, Wash. She is probably the only daughter in the Pacific northwest of the noted $65,000 bull, Sybil's Gamboge. Pearl was purchased last summer at the Waulkley Bellows farm sale by Cyrus Gates, well-known financier and Jersey fancier of Bellingham. Gates left her to be bred and she made the long trip in November, arriving at her new home on the 10th. She was dropped August 15, 1920. She was bred to Sybil Gamboge 3d, said by Tom Dempsey and other good Jersey judges to be the best son of Sybil's Gamboge. Sybil's Gamboge, the sire of Mr. Gates' heifer, is not only the highest priced Jersey bull ever sold at auction, but he is by Imp. Royal Majesty and out of Gamboge Oxford Sybil, a great show and production cow.

Get new 1922 Model STUMP PULLER FREE

Clear your Stump Land **without cost.** Increase your income and the value of your farm. Your richest land lies under those tax-eating stumps. Pull them—make this valuable land **work for you.** Get a Stump Puller **free** by being a

Kirstin Demonstrator

Pay for your KIRSTIN by showing it to others on your own land. Our plan does not interfere with your own work. Thousands write us every year about the KIRSTIN. We want one owner in each locality who will let us send other people to his farm to see the KIRSTIN work. You don't **sell** or **canvas**—just **show** the KIRSTIN.

We Pay You Cash

The KIRSTIN Demonstrators earn cash commissions for this easy work. A few commissions pay for your own Puller and give you **extra money besides.** No limit to the money you can earn.

WRITE TODAY! Act quick! Only one demonstrator appointed in each locality. Special low prices to demonstrators. Write for full details at once—today.

A LITTLE "WANT AD" FREQUENTLY OFFERS A BIG BARGAIN. MAKE IT A PRACTICE TO READ OUR "WANT ADS" EVERY WEEK.

POWER *when you need it most*

Power to plow deep and fast—day and night if necessary—is what every farmer demands of his tractor.

Is your tractor making good? Is it giving you the power that shows up in acres plowed?

Your answer depends largely on the care and attention you give to **LUBRICATION.** It is a vital factor in tractor operation—yet is frequently overlooked.

Lubrication actually determines engine power and three-fourths of your repair costs. And it also has a tremendous effect on fuel and oil consumption.

That's why you can't afford to buy just ordinary "oil." It pays to use **SUNOCO Motor Oil** and be certain of proper lubrication. Although your oil bill for a year is one of your smallest operating expenses, yet ordinary oil is one of the most expensive things you can buy.

SUNOCO has the quality and accuracy to maintain compression-tight, leak-proof cylinders. That means full engine power and maximum fuel economy.

And **SUNOCO,** being absolutely pure, leaves no gummy residue to carbonize in the cylinders; foul the spark plugs and clog the valves.

Buy your **SUNOCO** in 30 or 50 gallon, faucet-equipped steel drums. It's just as economical and efficient for your truck or passenger car as for your tractor. Any **SUNOCO** dealer will tell you the right types to use. A trial will convince you.

It will pay you to read our booklet, "Lubrication or Just Oil." Ask your dealer for a copy or write us.

MOTOR OIL

How to Overhaul Tractor

By PROF. L. J. SMITH, W. S. C.

While the following article is written with special reference to the tractor, much of the advice applies equally well to automobile motors. There is little difference between the four-cylinder tractor motor and the auto motor, except that the tractor motor is heavier and has larger bearings.—L. J. S.

Tractor overhaul is a vital item in power farming. A good deal of the time the engine is being worked to its power limit, and it must not be neglected. Many complain that the tractor loses its power very rapidly, but with reasonable care this claim is without foundation. An engine well overhauled should start its second season at practically the same power it originally developed. The third season a 25-horsepower will likely fall off two to three horsepower. Before the fourth season (if it has hard continuous service) the cylinders should be ground and oversize pistons and rings put in; and then the motor will have a little more power than when it came from the factory.

The first step in the overhaul is to get the tractor into a building where there is plenty of light and, if possible, a clean floor. If there is a bench and vise available, carry them in alongside the tractor for greater convenience. Then gather together all the tools and wrenches about the place and you are ready to begin.

Clean It Well to Begin With.

One point should be mentioned first, that of thoroughly cleaning the grease and dirt off the tractor. A half-cleaned tractor takes more time and makes a dirty job all through the overhauling. After getting off all one can with scrapers and brushes, go over it again with plenty of rags and kerosene.

Get some of the boxes to put nuts and small parts in and start dismantling the motor. If several men are on the job, some can work on the wheels and axles, or, in the case of track-laying types, on the tracks. Examine and clean all bearings and renew badly worn parts. Take all play out of the steering gear, if possible.

Take off all grease cups and clean out the old grease in the cups and in the holes leading to the bearings. It is a good idea to refill the cups the first few times with graphite hard oil. Graphite is a splendid lubricant, but should not be used continuously, as it tends to flake up on the bearing surfaces. The above jobs are for the less experienced and can be going ahead while the motor, which is the vital part of the tractor, is being cared for.

In some cases, the whole motor can be loosened from the frame and lifted right out on the bench. If it is very heavy, it can be lifted by means of a tripod made of 4x4s and a block and tackle. More often the motor is overhauled on the tractor.

The First Step.

Usually, the first step is to take off the cylinder head, being careful to save the copper gasket. Scrape off all carbon deposits and grind the valves, being sure to number each valve with a center punch to correspond with its valve seat, for each valve must back to its old place. If the valves are badly worn or pitted, as is often the case with exhaust valves, they will need considerable grinding with the coarse paste before finishing with the fine. Be careful not to get any coarse paste in the part of the tin that holds the fine paste. Use the paste sparingly, and clean off thoroughly when through to avoid getting the grinding compound into the cylinders. It is a good plan to have a light spring under the valve so that each time the pressure is taken off the valve while grinding, the valve will lift off the seat. Then rotate the valve a quarter turn before starting grinding again to avoid grinding grooves in the seat. Never make a full turn when grinding; but rotate back and forth, then lift and turn the valve, and press down and repeat.

One should have a couple of valves and springs on hand for emergency. Also an extra cylinder head gasket.

Kerosene tractors run hotter than gasolene, and often require regrinding of valves once a month, if doing hard continuous work. Again, many tractors will require the valves ground but once in the middle of a season's run. Bad seating valves result in loss of power.

When tightening down the head be careful to tighten the center nuts first, else the gasket may not make a tight joint, and water will leak from the jacket into the cylinders. This is especially important on twin cylinder motors.

Placing the Rings.

If the tractor has had a heavy season's run, it is worth while putting in two new rings in the grooves nearest the compression end of the piston. Be sure that all groves are well cleaned of carbon. Before putting the rings in place revolve each in its respective groove to be sure it does not fit too tightly. In case the rings are too wide, dress them down carefully and uniformly by placing a piece of emery cloth on a flat, true surface, and rubbing the ring on the cloth. In the absence of emery cloth, dress the edges carefully and uniformly with a fine file.

There is also danger that the ring may be a little too large in circumference for the cylinder. Put the ring in the cylinder at the lower end or half way down from the top and note if the ends of the ring touch at the joint. Be sure the ring is in square and that the edges are in line. In a 20-horsepower four-cylinder motor, the slot where the ends of the rings meet should be about one-hundredth of an inch in width. In a two-cylinder 20-horsepower motor the space should not be less than one-sixty-fourth of an inch at the joint.

It is well to find if the new ring fits uniformly against the cylinder wall. To do this, rub a very small amount of lamp black around the cylinder, about half way down the cylinder. Put the rings in the piston, and put the piston in its cylinder and work it back and forth vigorously. Then remove and the spots of contact will readily be seen on the rings. It may be they will require a little fitting with a mill file in order to make a tight joint and therefore give a good compression.

Adjusting the Crank Shaft.

Another of the main items in the overhaul is the adjustment of the crank shaft, connecting rod (crank pin), and piston pin bearings. Many of the smaller four-cylinder motors have no adjustment of the piston pin bearings. In such a case, the piston pin and brass bushings are replaced possibly every three or four years. As the pin is hardened and ground it is often necessary to replace the bushings only.

The connecting rod or crank pin bearings get loose quickest, and pound badly. They must not be neglected or the babbitt will be spoiled and possibly the bearing gotten out of round. After the crank case is off, try the lower ends of the connecting rods for end play. The babbitted shell is made a little narrower than the bearing surface. If there is looseness, the lower end of the connecting rod can easily be moved from side to side. Take off the cap, noting how it is marked so it can be returned the same side to. If the surfaces are smooth, take out a thin shim from each side and replace the cap, screwing up the nuts evenly and tightly. If it is still loose, more shims must be removed. The bearing must not be so tight that one can not turn the crank shaft easily. Before finally tightening the nuts put a little thin oil on the bearing surface. It never should be set up dry, nor should the crank shaft bearings.

If the babbitted surface is rough and badly worn, it must be scraped. First mix up some lampblack and oil, or better still, get some prussian blue. Put the smallest bit on the tip of a finger and rub very uniformly over the bearing. Then tighten the cap and turn the crank a few revolutions; and loosen the cap. The high spots will be blackened and must be scraped down with a babbitt scraper. Continue the above until the dark spots are within a half inch of each other. The surface of the babbitt within a quarter inch of the shims should not touch the bearing, in

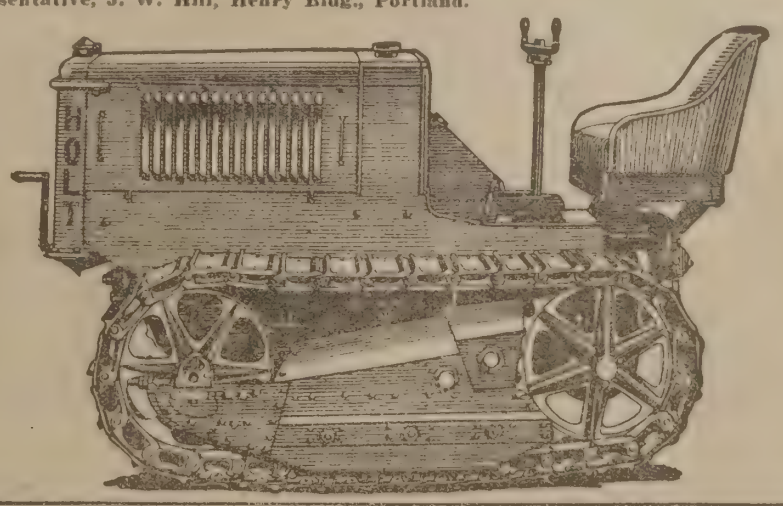
CATERPILLAR

T-35 TRACTOR

"Caterpillar" T-35 Tractor is not designed or built to meet a price. It is built to maintain the high and exacting standards of "Caterpillar" performance—dependable, economical, trouble-free service.



In the "Caterpillar" T-35 Tractor there is greater economy, greater value—by every test and measure—in dependability—in long life—in low operating costs—in negligible repairs—in capacity for work—in uninterrupted field service and in every other way. "Caterpillar" T-35 Tractor was not offered to the public until it could meet these value-tests.

This Tractor is ideal for small farms, vineyards, berry fields, road patrol work, hauling and general contracting. It also is a handy supplement to the power needs of big farms. Its utility as a tractive power unit is supplemented by its ability to handle scores of belt jobs: pumping, grinding, sawing and other stationary work. A factory and a service organization on the Pacific Coast assure service any time, anywhere. Write at once for full information.

LIVESTOCK AND DAIRY

Essentials for Success

There are seven essentials of success in dairying, in the opinion of the international dairy extension service. They are: (1) Healthy animals, (2) good dairy type and good breed type, (3) well-bred animals, (4) correct and liberal feeding, (5) sanitary surroundings and good care, (6) publicity and (7) sound business practice.

No animal in a herd can secure the results it is capable of when it is sick, says William M. Rider, director of the extension service. Its breeding and individuality may be of the highest order, yet if it is afflicted with one of our contagious cattle diseases or contemporary illnesses it can not yield maximum results. Healthy dairy cattle are, therefore, essential to secure the highest net returns.

Form and function go hand in hand when it comes to economical milk production. Cows possessing correct dairy conformation and good size for their age are most likely to be good producers. Become familiar with correct dairy and breed type and keep only dairy animals of this kind.

In every case the sire of your herd should be a purebred animal, and conform to the requirements mentioned in 1 and 2 above. Retain only the best and highest bred of your grade cows which are of good dairy type. Breed these to good, purebred bulls, and raise the best heifers for your future herd. Keep milk and butterfat records of each animal in milk, know production and cost of production. Build your herd with profitable dairy animals only. Change from a herd of grade cattle to a purebred one as soon as possible. Your net returns will be greater, you will be more satisfied with the dairy business.

Good cows need plenty of right kind of feed to produce milk at a profit. Remember that about one-half the feed is used by the cow for her body upkeep. Feed enough feeds to keep her in good condition, and for a large flow of milk. Feed about one pound of a good grain mixture to each three pounds of milk, also about one pound of hay per hundredweight of the cow, and from three to four pounds of corn silage per hundred live weight. Feed at regular times each day. Supply plenty of fresh, clean water, and not too cold.

Provide clean stalls, with plenty of light, fresh air, and not too crowded. Have cow barn well ventilated. Avoid dampness, draughts and darkness in barn. Give cattle kind treatment and good care. Be regular each day in time of feeding, milking and doing the chores.

Advertise your herd and your farm. Let the public know what you have and they will buy your surplus stock and your dairy products. Give your local newspaper and your breed paper items about your herd and your plans. They want the news and will help you to gain favorable publicity. Besides using the press make use of attractive leaflets, folders, cards and the outdoor metal display signs. Advertise on your farm, tell your name or farm name, and what breed you have. Thousands of prospective customers pass your farm in a year, and you will find "it pays to advertise."

This is absolutely essential in the management of your dairy herd. Keep a record of expenses and receips, know what the herd is doing as a whole, and also have record of each cow in herd as to her expense and return. Get rid of unprofitable cows. Market your products profitably by knowing costs of production Use business stationery, letterheads and envelope. Answer correspondence promptly. Guarantee satisfaction with every sale and transaction.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

INFECTIOUS DISEASES, ARTICLE 3.

Distemper.

Distemper, or strangles, is one of the very common diseases of horses and mules: in fact, few escape this disease in some form during the early part of their lives. It may be quite severe or very mild, depending upon the resistance of the animal and the strength of the bacteria. This disease is contagious, though it does not spread widely except by contact, and it does not go in waves over the country, like some other animal diseases, though at no time is it far away. There is always a chance of it getting into a group of horses that haven't had it, especially if they have been on the highways or tied in town to a public hitching place, where other horses that are suffering have been tied. It is very easy for this disease to spread in this way, more easy than is generally supposed. Then once a single animal on a ranch is taken sick it is easy for it to transmit the disease to others with which it comes in contact, until it not uncommonly spreads to all the animals on a ranch. Spread is made easy and rapid because of the coughing and sneezing by the affected animals. They spread the materials from the nose and throat over a wide area and all animals within a radius of many feet are liable to be sprayed. Then, too, they contaminate mangers, feed racks, water troughs, halters, harness blankets and everything with which they come in contact.

When Symptoms Appear.

Symptoms of this disease appear from two to eight days after the animal has been exposed, and first may be noticed the evidence of fever, such as standing coat, slight loss of appetite and general indisposition. These symptoms may escape notice in animals that are not being used regularly and then the first noticeable symptom may be a discharge from the nose, which begins as a thin, watery one and quickly thickens until it becomes quite thick with pus. This pus discharge is very characteristic of strangles and is always one of the prominent symptoms.

Aside from the nasal discharge abscesses very frequently occur in the region of the throat; these are caused by the bacteria following the fluids from the nasal cavity downward to the throat, and there being stopped by the glands in the upper part of the neck. Stopping here, the bacteria continue to grow and form abscesses in this region. These abscesses are sometimes serious, as they get large and may cause so much swelling that they obstruct the breathing. As a rule strangles is confined to the head and upper part of the neck and for that reason treatment, to do the most good, ought to be given these parts.

Local Applications.

It does little good to give medicine internally, but much good may be done by giving most of the attention to the head and throat, where most of the trouble is located. Allowing the animals to inhale vapor from hot water to which has been

"Cut the Price" Says Melotte

MELOTTE, the Edison of Europe, manufacturer of the greatest Cream Separator the world has ever known, announces a sweeping reduction in prices.

Labor conditions in general together with tremendous re-building and re-organizing efforts put forth by this big man of Belgium has resulted in cutting production costs to the bone.

And right now *at this particular time,* exchange rates are extremely favorable. Take advantage of this condition while it lasts. Get the most for your American dollar. Buy now and save money!

Before buying any separator find out how the Melotte has won 264 Grand and International prizes and how, for Efficiency of Skimming, Ease of Turning, Convenience of Operation and Durability—the Great Belgium Melotte has won every important European Contest.

Belgium Imported MELOTTE

From Belgium to The Pacific Coast by Water
The increasing demand for Melotte Separators on the Pacific Coast has prompted us to open a Pacific Coast Office to receive direct shipments by water from Belgium. Because of this, farmers and dairymen all over the West now have a wonderful opportunity to save money in the purchase of a Melotte Separator. A Melotte can now be ordered direct from our Pacific Coast Office, which means a saving in time to you of one to two weeks. You are losing money every day you are without it, so send the coupon today to the Pacific Coast Office.

$7.50 after 30 Days Free Trial

We will send an Imported Melotte Cream Separator direct to your farm on a 30 days absolutely Free Trial—no deposits—no papers to sign—use it as if it were your own separator. Compare it—test it in every way.

When you are convinced the Melotte skims cleaner, turns easier, washes quicker, lasts longer than all others, then pay $7.50 as first payment and the balance in small monthly payments until the separator is paid for.

Self-Balancing Bowl The Belgium Melotte is the only single-bearing-bowl separator ever made. This patented bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing.* It skims as perfectly after 15 years' use as when new Positively cannot ever get out of balance—cannot vibrate and thus cause cross currents which waste cream by remixing with the milk. The 600-lb. Melotte turns as easily as the 300-lb. machine of other makes. Spins for 25 minutes unless brake is applied. No other separator has or needs a brake. The Melotte bowl has solved the problem of perfect skimming.

Send This Coupon!

DR. HESS DIP and DISINFECTANT

Use the sprinkling can about your premises—the dipping tank where the occasion demands. For your hogs, a wallow is the most convenient, and quite effective. To every 70 to 100 gallons of water add one gallon of Dr. Hess Dip and Disinfectant. Then your premises—the cow barn, the stables, the pig pen, the poultry house, the sink, drains, closets, cesspools—everything, everywhere, will be pure and healthful.

You can dip, or you can spray or sprinkle, or apply with a sponge or brush, Dr. Hess Dip and Disinfectant to the animal body. There's scarcely an animal parasite, skin disease, or infection that Dr. Hess D. and D. will not remedy. *Guaranteed.*

added small amounts of eucalyptus oil or spirits of turpentine is very helpful. One should as carefully avoid anything that has a tendency to irritate the air passages, such as smokes of all kinds, which by some are considered helpful.

Attention to the throat is urgently needed to see that the animals do not suffer from the abscesses that may develop there. If abscesses start it is best to poultice them at once to cause them to develop as fast as possible, so that they may be opened and relieved as soon as possible. Before they are opened, however, one should wait until they are near the surface unless he is very familiar with the region to know that he isn't going to cut some large vein or nerve that is present in this region. The poultice should be large and hot as the skin can bear and continued until the abscess "heads up," so that it can be opened. Too often the poultices are so small and hold so little heat that they are quite useless.

Keep the sick animals away from the well ones as much as possible and try to prevent the spread of the disease, but unless the animals can be kept entirely away, that is, if they must use the same watering place and some other things in common, the chances of stopping the spread of strangles are very remote. Vaccination of well animals is often asked about, but, while I would not say that it does no good, it is not a specific and will not certainly prevent animals from getting this disease. It may at times make the attacks lighter. It is well enough to try to get the good that is in it, though too much must not be expected.

VETERINARY

By DR. S. B. NELSON.

Pneumonia.—I have a cow that has been sick for about 10 days. She will not eat any hay or mill feed. After she was sick for three days she became stiff. She was stiff for 24 hours and then got over it. She has a cough and goes along with her head down, when she coughs she slobbers at the mouth. One side of her nose has been running for the last three days. She was giving four gallons of milk a day, but only gives half a gallon now. H. R.
Spangle, Wash.

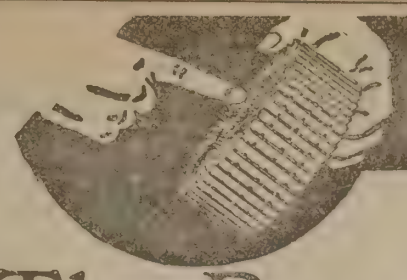
It is quite likely that your cow is suffering from either pneumonia or pleurisy, most likely pneumonia. By this time she will be better or dead. If she is still living, the thing that she will need is a tonic. You will find a tonic composed of one ounce of compound tincture of gentian and one-half dram of quinine in a solution of one quart of warm water, given to her morning and evening, will be of great value.

Cow Pox.—Will you please advise me what to do for a cow that has fallen off in flesh and stays that way, although fed the same as the other cows that are looking fine. Her bowels seem to be too loose and her hair is rough. She has been in this condition nearly two years; before that time she was always fat. Lately she she had small sores resembling boils come on her bag. R. A.
Colfax, Wash.

The chances are that your cow has had cow pox. If the small boils or sores still occur, wash the udder before and after each milking with a 2 per cent solution of lysol. After milking wash and dry the udder carefully and apply a little zinc oxide ointment to the scabs. Give her one-half ounce of compound tincture of gentian in a little water once daily for two weeks. Increase her grain ration gradually as she will take it.

Lame Pigs.—I have some 6-month-old pigs that are lame and they can hardly get up. I have been feeding mill run and milk and some corn, and they eat well. What is the matter with them? J. C.
Talmya, Wash.

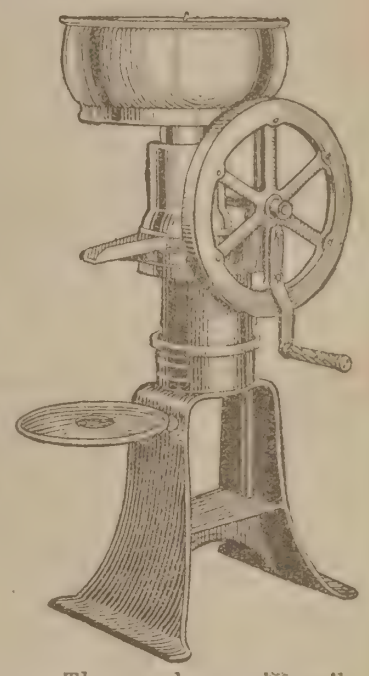
I wonder if your pigs have a good place to sleep, where there is no draft. The first thing to do is to see that their sleeping quarters are not drafty. Put in bunches of three or four and give them two ounces of castor oil to the four pigs. Mix it well with the slop, so that one gets his share. The next day begin feeding five grains of potassium iodide to each pig. As soon as possible begin giving them a little exercise if they can take it.



Wart Treatment.—I have a heifer coming fresh soon and her teats are covered with warts. What will take these off?
Brooklyn, Wash. D. R.

You will find the use of the following prescription valuable if applied to the teats after milking, morning and night: One and one-half drams of chloral hydrate, one and one-half drams of acetic acid absolute, one dram of salicylic acid, one dram of spirits of ether, four drams of collodion.

String Halt.—I have a fine saddle mare that has been troubled with string halt for about five months. She is not very bad and there are times when it is hardly noticeable. Is there a cure for it?
Tonasket, Wash. W. C. D.



The safest and best treatment for string halt in horses is an operation. This has

(Continued on page Fourteen.)

It's the LINK BLADE does it!

The Proof of Simplex Superiority Is in the Using

We base our claims for superiority of the Simplex separator upon what it does in actual use.

Simplex representatives are ready at all times to demonstrate the skimming and easy running qualities of their machine against all others.

The Babcock Test and the judgment of an unprejudiced operator decide in favor of the Simplex.

The Simplex link-blade is the result of 40 years of cream separator building. It gets all the cream. It is easy to wash.

The Simplex is built for convenience. The supply can is easily reached. The crank is just the right height. What is more important, it turns easily. Every bearing and gear is always accessible for oiling.

For those who have electricity there are motor driven models.

TEN DAYS' FREE TRIAL
SEND NO MONEY

To prove our confidence in this separator we will ship you a new 1922 Simplex. Use it for ten days without cost. If you do not say it beats all other separators, return at our expense. Write for literature today.

POULTRY AND RABBITS

Questions Answered

By GEORGE R. SHOUP, Poultryman, Western Washington Experiment Station.

I have 27 White Wyandotte chickens and would like to know how many roosters for every 12 hens and how often to change roosters to have good success.
LaCrosse, Wash. F. S.

We find White Wyandottes one of the most difficult breeds to secure fertile eggs from. This is one of the trials of the Wyandotte breeder. We usually recommend six hens to one cockerel, or four pullets to one cock bird, in mating this breed. Would also suggest that in the case of birds carrying very heavy fluff feathers, some of the fluff be pulled out.

Last year I penned my purebred Rhode Island Red pullets up with a good red rooster and raised some very pretty pullets. I have been advised by some to use this same rooster with his pullets this year. Would it be all right to do so? I would also like to know just how to cull my flock for good layers. I keep about 70 hens. I have only oats and wheat to feed them. How is best to feed them? We are 60 miles from the railroad, so it isn't practical to get prepared mashes.
May, Idaho. MRS. E. M.

It would not be advisable for you to use the male bird with his daughters this year, as you would be inbreeding, and unless the individuals have been very carefully selected there would be a tendency to reduce the vitality of the offspring. You will obtain better results, I believe, if you use one of the cockerels obtained from this mating with the hens that you used last year. As only one of these hens will be 50 per cent or more of the cockerel's blood you will not be inbreeding. I believe it would be more satisfactory for you to use the old hens mated to a cockerel than to try to use pullets for breeding.

At this time of the year it is hardly advisable to try to cull your flock for good layers, except to weed out small immature or sickly-looking individuals. If you have kept your birds as long as this you might as well keep them through the spring, because nearly any bird will lay enough eggs to pay for her keep during the next few months. About the 1st of July your county agricultural agent will probably be glad to aid you in culling your flock.

I suggest that you feed the birds four pounds of soaked or sprouted oats for morning feed and about eight pounds of whole wheat for the evening feed. You should be able to purchase corn meal, or corn to be ground, from your neighbors, as I believe it can be grown in May.

A satisfactory dry mash could then be made up of 60 per cent wheat meal, 2 per cent ground oats and 20 per cent corn meal. Give the birds all the sour skimmed milk and oyster shell they will eat.

What is the matter with my chickens? When they walk they stagger around, seem weak in their legs, and their heads jerk back and they act as if they would tip over backward. Some of them have swelled heads. A few of their combs have turned blue. One or two of them have flopped around on the ground a while and then got up and seemed all right. My henhouse has been very damp until lately.
Wilsall, Mont. MRS. G. T. M'B.

I believe that the swelled heads which you mentioned are due to a roupy condition brought on by the house being damp. The weak condition of the legs may be caused by a number of different conditions, such as rheumatism, tuberculosis or the feeding of too much protein in the mash. The action of the head and body could be caused by either intestinal worms or poisoning due to the birds eating decomposed meat, moldy foods or too much salt.

The only satisfactory way to diagnose your trouble is by a post mortem examination. The sick birds should be isolated immediately and the whole flock given a dose of epsom salts at the rate of one pound per 100 birds, fed in a crumbly, moist mash. They should be given what they will consume in about 15-20 minutes.

I suggest that you properly ventilate your poultry house to take the dampness out, and if in case any of the birds die or the trouble spreads that you send one or more birds to the veterinary section of your state college for examination.

Which is better, raw or cooked meat for laying hens? How many hens can be mated to one rooster? MRS. P. T. S.
Harrison, Idaho.

For laying hens the cooked meat in the form of meat scraps is more satisfactory than the raw meat, because it is more uniform in quality and does not have as great a tendency to throw the birds off feed. Raw meat should be fed to laying hens is only a limited amount. I would not use over an ounce per bird every other day and not even this amount in case the birds are getting meat scraps in the dry mash, or all the skimmed milk they will drink. The raw meat is so forcing that I have found in many cases the birds have lost the use of their limbs when it has been fed with other protein feeds.

One male can be mated with 8 or 10 females of the general purpose varieties when penned and 15 when on range. With the lighter varieties one male can be mated with 15 females when penned and 25 to 30 when on range.

Rabbits Out of Condition

By A. D. NORRIS.

(Rabbitry Department, Western Washington Experiment Station.)

Last summer my rabbits quit breeding and I thought it was on account of the bucks not being any good, so I killed the bucks and all the does except about 10 and bought a new buck. They are the Flemish Giant breed. Now only one doe has taken the buck. I have tried all of them several times, but it seems to do no good. They are all less than a year old.
F. M. F.
Selah, Wash.

Your trouble may have been in the buck. If with the does, they are out of condition. If the skin seems well cushioned underneath, the frame well rounded and the pelvis bones not prominent when the hair is pressed over the rump, there is no doubt but that she is too fat.

Feed her about 6 ounces good alfalfa hay each day and give her fresh water and every third day about seven ounces of mangels or carrots. If in the summer give her the amount of lawn clippings she will consume in an hour. Exercise by allowing her a runway each day for an hour or two. When the surplus flesh seems to be off feed the amount of grain necessary to keep her in fair condition. Lump salt should be accessible practically all of the time. Nothing is gained by giving something to create an abnormal condition.

In the fall of the year and when the Flemish Giants are not mating, until 10 months of age, it seems to be harder to get breeding results.

BE SURE OF VIGOR.

The breeding fowl should be a vigorous bird, with face, comb and wattles of a bright color, eyes bright and fairly prominent, head comparatively broad, legs short, set well apart and straight, plumage clean and smooth.

USE A GOOD ROOSTER.

A standard-bred male at the head of an inferior flock will improve the quality of the stock materially.

Chickens Sick?
Hens Not Laying

There's no excuse for roup, colds, canker, sore head, chicken pox, skin disorders, cholera, indigestion, bowel trouble and such ailments. GERMOZONE positively will rid your chickens of disease—and keep them healthy. For over 30 years the dependable remedy and preventive. Get Germozone and Lee's FREE BOOKLETS, which explain proper feeding and care and how to keep hens laying regularly the year round. At drug or seed stores. If no dealer, order by card. 75c and $1.50 sizes. Send no money—Postman will collect. No extra charge.

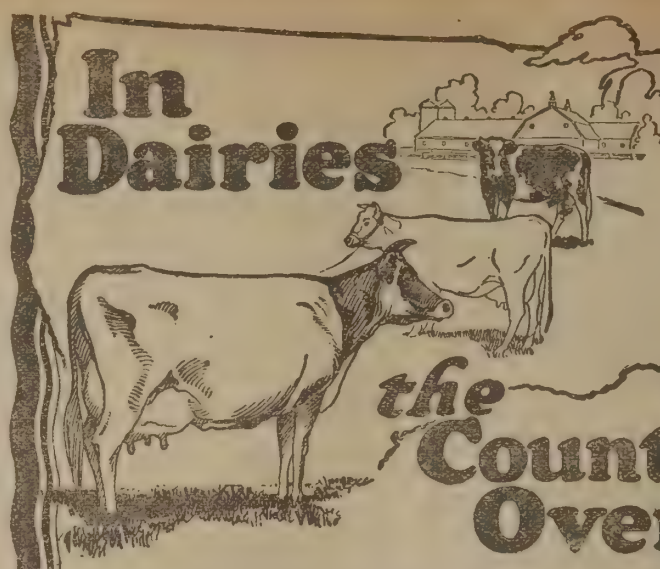
GENERAL ADVERTISING.

THE CAUSE OF WHITE DIARRHEA

White Diarrhea is caused by the bacillus Bacterium Pullorum transmitted through the yolk. There is scarcely a hatch without some infected chicks. The germs multiply very rapidly and one infected chick may infect the entire brood. The germs can be killed by the use of preventives. Intestinal Antiseptics to kill the germs should be given as soon as the chicks are out of the shell. It is much easier to prevent than it is to cure.



HOW TO PREVENT WHITE DIARREHA

Dear Sir: Last spring my first incubator chicks when but a few days old began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged. Finally, I sent 50c to the Walker Remedy Co., Dept. 543, Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We never lost a single chick after the first dose. We raised 700 thrifty, healthy chicks, where before we never raised more than 100 a year. I'd be glad indeed to have others know of this wonderful remedy. Ethel Rhoades, Shenandoah, Ia.

DON'T WAIT

Don't wait until White Diarrhea gets half or two-thirds your chicks. Don't let it get started. Be prepared. Write today. Let us prove to you that Walko will prevent White Diarrhea. Send 50c for box on our guarantee—money back if not satisfied. **Walker Remedy Co., Dept. 543, Waterloo, Iowa.**

In Dairies the Country Over

Bag Balm is greatly valued by cow owners everywhere because it is perfect insurance against the troubles that attack the milk yield through the udder or teats.

The slightest cut, bruise, chap or sore will make a cow restless and cause a "holding-up" of the milk. Besides, many serious ailments result from neglecting what may seem like very slight injuries of these milk-producing organs.

Any inflammation, soreness, congestion or hardened tissue will quickly heal and become soft and normal through the penetrating action of Bag Balm. Healthy tissue and normal circulation give the cow comfort and restore a full milk-flow. Caked Bag responds promptly to application of this ointment; equally valuable in treating Bunches and Cow Pox.

For the sake of safety, keep a package on hand; feed dealers, general stores and druggists sell big 10-ounce package at the reduced price, 60c.

Write for our valuable free booklet, "Dairy Wrinkles."

ORCHARD AND GARDEN

Orchard Soils

Rains Leach Out Plant Foods

Almost any soil will grow apples provided the climate is not too severe. In fact, every state in the Union raises apples to some extent, but less than a third of them grow apples on a commercial scale, says O. M. Morris, head of the horticultural department, Washington States college, who spoke on the subject of "Orchard Fertility" at the western Washington horticultural convention at Mount Vernon recently.

"The degree in which any district succeeds depends in large measure on the selection of the proper location for orchards, the wood growth of the trees and the fruit production. Hand in hand with the foregoing points are proper climatic and soil conditions, and these have much to do with fruit production.

"Tillage the first few years should never stir the soil from around the roots, but should be just deep enough to cause a good physical condition of the soil," continued Professor Morris. "Too much cultivation often causes damage, especially when the soil is inclined to puddle. In many orchards clean cultivation has given way to a system of cover crops, but the practice is as yet in the experimental stage. It is often difficult to ascertain the results from cover croppings or fertilization because in many cases an increased production is credited to a method of pruning or to irrigation.

"It is necessary, however, that orchardists in Washington pay particular attention to fertilization and cultivation because the greater part of the Washington orchards are commercial orchards, the owner depending entirely upon the apple crop for his income. Experimentation has proven that such fertilizers as nitrogen, phosphorous and potassium, which are three of the principle plant foods, are found to be leached from the soil by excessive rainfall. In some sections, where the rainfall is heavy, such leaching has caused nitrogen to be the limiting factor, since it is very soluble.

"In irrigated districts, on the other hand, this condition is overcome by irrigation, which supplies only enough water to be used by the trees. In such cases when nitrogen is applied to the soil it appears to have a greater effect, but in reality it is merely because there is no leaching process to carry this element away.

"This is a question which should be remembered when considering the degree of permanent agriculture in any community. The condition will also apply to other soil elements, such as phosphorous and potassium, but to a more limited extent. An ample supply of all plant foods is necessary for the normal growth of the tree and maximum production of fruit. It is erroneous to believe that nitrogen alone will supply foliage while phosphorous will produce seed growth. Other elements are necessary and should be applied in the proper combination, as proved by the fact that a lack in any one plant food will result in an unfertile soil, and the addition of this element will restore the soil to fertility. This has caused people to get the impression that that particular element alone produced the results, when in fact it was the combination that was necessary.

"There is only one way to tell exactly which element is deficient, and that is to make the fertilizer applications in rows—leaving a check plot untreated to show the comparison when nothing is applied. As a double check a strip of lime can be applied at right angles to the rows. This will show in what combination lime should be applied. The same result can be had with a cross strip of vetch or other cover crop. In many cases, however, the value of a fertilizer will be indicated by its effect on a cover crop in the entire orchard, since the trees usually show the same results."

Forcing Rhubarb

The growing of rhubarb in warm cellars and roothouses during the winter months has become quite an industry in certain parts of Washington. The process is known as forcing, with artificial heat, but no light is needed.

Many growers make use of their root cellars, provided all potatoes and roots can be stored elsewhere by early January. Others have especially built houses covered with paper roofing instead of dirt, but in most cases a stove is placed at each end with each pipe running to the center, where it meets a chimney. The cellar under the dwelling house is often used if it is large enough and can be given sufficient heat.

E. C. Orton of Sumner, Wash., has a house 180x160 feet, which he built especially for forcing rhubarb. The concrete walls are three feet high and are set into the ground about 10 inches. The roof was boarded over and covered with a good grade of roofing. The roots are placed in three sections, with an aisle running the full length on each side of the center.

"Better rhubarb can be had by using roots that are 5 years old," said Orton. "Many growers try to get more use out of their plants by leaving them in the field until they are 6 and 7 years old, but plants more than 5 years old will produce small, slender stalks, which sell for a smaller price. It pays to use younger roots which are of good size and have not been pulled too heavy their second year. The season before it is put into the forcing cellar the patch should be pulled only twice. Heavier pulling will lower the vitality of the roots too much.

The large forcing house for rhubarb on the E. C. Orton farm near Sumner, Wash. The large double doors are wide enough to allow a team and wagon to drive the entire length when filling the cellar with roots.

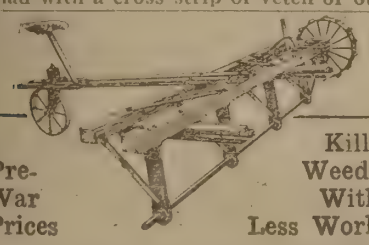
"Three pullings is about all that can be expected from roots in the cellar. The roots need watering once a week and the temperature of the air should be kept at summer heat, or from 75 to 85 degrees Fahrenheit. When stoves are used for heating they should be guarded by boards or sheet iron in order to protect the plants from the direct heat rays. It is best to give the roots a slow growth, since it makes better colored stalks."

Most of the rhubarb used for forcing is the Mammoth Victoria, since it is an early variety and brings the highest price on the market. The roots should remain in the ground long enough to get the benefit of the first freeze, since it is better for the roots. They will make a quicker growth and produce better stalks than when they are dug earlier in the season.

In marketing rhubarb the stalks are packed in 20-pound boxes after being graded as to size and quality. The large, even sized and well colored stalks are sold as choice rhubarb while the smaller and broken stalks are put into a second grade.

Efforts are now being made to ship the winter rhubarb to Chicago markets, but as yet no carload shipments have been made. The indications are that more sales will be made to eastern markets in the future since the local markets are well supplied every year by the truck gardeners.

INTERLOCKING ROOTS.



When the branches of apple trees interlock, it is safe to assume that the root systems under ground are also occupying about all the space there is for them.

SPACING PLUM TREES.

Lombard, Burbank and Red June plums are strong-growing varieties. Greengage and Damson will require not so much of space.

MUST USE JUDGMENT.

Mix your sprays according to the scientific formula given by those who know. Apply them with judgment.

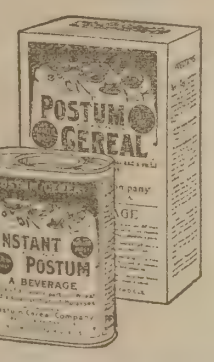
Wishing for sleep is a poor way to get it

A LITTLE wisdom in the daytime is a better assurance of rest than any amount of anxious wishing when nerves are a-jangle at night.

What you do at noon often has more influence on sleep than what you want and hope for, at midnight.



Coffee's drug element, caffeine, whips up the nerves, and when its use is continued there's usually a penalty which no amount of mental effort can avoid.

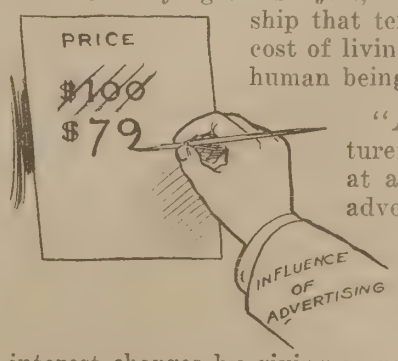
The part of wisdom, as so many thousands have found, is to turn away from nerve-stimulation and adopt rich, delicious Postum as the mealtime drink. Postum delights the taste, but brings no disturbance to nerves or digestion. Even the little children can share in the enjoyment of Postum at any meal.

It's better to anticipate warnings than to be driven by them.

It's better to encourage and preserve sound nerves and complete health than to listen to the clock ticks at night and say, "I wish!"

You can get Postum wherever good food or drink is sold and served. An order today may be the beginning, for you, of the great satisfaction and comfort which so many others have found in Postum.

Your grocer has both forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes.



Postum *for* Health

"There's a Reason"

Advertising Lowers Cost of Goods

"Advertising," writes John Lee Mahin, a man who has spent his life studying the subject, "is an organized form of salesmanship that tends, in the long run, to make the cost of living more reasonable for the average human being.

"Advertising enables the manufacturer to give a better quality of goods at a lower price than he could if his advertising had not lifted him out of the rut of ruinous competition and standardized his articles of merchandise.

"Further, advertising reduces interest charges by giving manufacturers power to make quicker collections; it lowers the cost of production of standard articles, benefits skilled labor and improves all kinds of labor conditions.

"Modern advertising methods reduce the cost of everything that requires personal salesmanship in its distribution. Thus they reduce the ultimate cost of living."

The above truths are well illustrated by the advertising columns of this paper.

A great many money-saving opportunities are to be found constantly in them.

Are you reading and investigating our advertisements? When you write our advertisers, please mention The Washington Farmer.

VETERINARY

(Continued from page eleven.)

been very successful in many instances. If you are away from the services of a veterinarian, Fowler's solution of arsenic in one ounce doses daily, morning and evening, for a week to three weeks, has given good results. This, however, is probably not as good a treatment as the former.

Frozen Teat.—I have a cow that I dried up last fall; when cold weather started she got a front teat frozen and it stayed frozen all winter, thawing when the thaw came and freezing again when it got cold. It is now black and very soft. Can I save it or will it come off and what effect will it have on the cow? She will freshen the last of March and is a heavy milker.
Omak, Wash. L. S.

The frozen part of the teat will sluff off. The probability is that that teat will leak the milk constantly while that quarter is secreting. I do not believe there is any way that you can save it except by drying that quarter up as rapidly as possible.

Needs Examination.—I have a 6-year-old cow that came fresh the first of last June, but she has not come in heat since. She is a good cow and I would like to breed her again. C. H.

Of course, the advice would depend upon the cause of her trouble, which I am not able to determine. You do not state whether she is kept in the stable or given exercise, but I might say that it would be to advantage to see that she gets considerable exercise. But I would watch her closely, because, you know, some animals do not show much nervous excitement during the period of oestrum, but that should not be the case for a period of months, so there is probably something else the trouble. It might be a cystic ovary; in that case you would need the services of a veterinarian to determine whether it was or not.

Bowels Loose.—I have a mare 16 years old that is troubled with loose bowels in the morning and afternoon and gets normal at work. Is there anything that will give permanent relief? L. L. C.
Newberg, Ore.

Try giving your mare a teaspoonful of listerine on her feed two or three times daily.

Sow Eats Pigs.—I have a sow that eats her pigs. She has 15 or more at a litter, but usually eats half or more before she quits. I have given her all kinds of roots and green stuff, cooked potato peelings and salt water and all the salty fat pork she would eat, but it does not help. She is a purebred, so I would like to cure her of this habit. E. M. L.
Buena Vista, Ore.

Feed your sow more nitrogenous material during the time that she is carrying her litter. She does not want salt pork. She wants lean meat, peas, soy beans, tankage. By changing the diet you may stop her of the habit. If it is a fixed habit she may not quit it.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

The GAUNT GRAY WOLF

By DILLON WALLACE

Copyright, 1914, by Fleming H. Revell Co. Published by special arrangement with the International Feature Service, Inc.

SYNOPSIS.

Shad Trowbridge, a New England lad of about 20 years, sails on a mail boat to Labrador, where he plans to spend a few weeks [illegible] hunting and fishing in the wilderness. Upon his arrival he meets two experienced fishermen and trappers, Dick Blake and Ed Matheson, who recommend to him a young lad of 17 known as Ungava Bob, as a guide for his hunting and fishing trip inland. Desiring to lose the least time possible in securing Ungava Bob's services and starting inland for his vacation, Shad starts across the bay in his canoe in the face of a threatening storm. In the darkness his canoe is capsized and he is plunged into the icy water. As he rises to the surface a rope is thrown to him and he hears a voice shouting to make it fast. He is soon drawn aboard a little sailboat which, unknown to him had approached at the moment of his great need.

"I'm sure I owe my life to you," he said to the lad piloting the sailboat. "It was lucky for me you saw me."

"'Tweren't luck, sir," said the lad. "'Twere Providence. 'Twere the Lord who were takin' care of you."

CHAPTER III.

Shad Is Guest of Ungava Bob.

"Well, it was a pretty good way, anyhow. But where did you drop from? I didn't see you till you threw me that line a few minutes ago."

"I were passin' t' wind'ard, sir, when I sights you, an' not knowin' who 'twere, I sails close in till I makes you out as a stranger, an' then you goes down an' I picks you up."

"That sounds very simple, but it was a good stunt, just the same, to get me the line and come around in this chop the way you did, and then haul me aboard before I knew what you were about—you kept your head beautifully, and knew what to do—and you only a kid, too!" added Shad, in surprise, as the moonlight fell full on Bob's face.

"A—kid?" asked Bob, not quite certain what "kid" might be.

"Yes—just a youngster—a boy."

"I'm 17," Bob asserted, in a tone which resented the imputation of extreme youth. "You don't look much older'n that yourself."

"But I am—much older—I'm 18," said Shad, grinning. "My name's Trowbridge—Shad Trowbridge, from Boston. What is your name? Let's get acquainted," and Shad extended his hand.

"I'm Bob Gray o' Wolf Bight," said Bob, taking Shad's hand.

"Not Ungava Bob?" exclaimed Shad.

"Aye, they calls me Ungava Bob hereabouts sometimes."

"Why, I was on my way to Wolf Bight to see you!"

"T' see me, sir?"

"Yes, I came up from Fort Pelican to Porcupine Cove with two trappers named Blake and Matheson, and they told me about you. They said I might induce you to take a trip with me."

"A trip with you, sir?"

"Yes. I want to take a little canoe and fishing trip into the country, and Blake and Matheson suggested that you might have two or three weeks to spare and could go along with me. I'll pay you well for your services. What do you think of it?"

"I'm—not just knowin'," Bob hesitated. "I leaves for my trappin' grounds th' first o' August t' be gone th' winter, an'—I'm thinkin' I wants t' stay home till I goes—an' my folks'll be wantin' me home."

"Well, let's not decide now. We'll talk it over tomorrow."

"You'm cold," said Bob, after a moment's silence, reaching into a locker under his seat and bringing out a moleskin adicky. "Put un on. She's fine and warm."

"Thank you. I'm thoroughly chilled," Shad admitted, gratefully accepting the adicky and drawing it on over his wet clothing.

"Pull th' hood up," suggested Bob. "'Twill help warm you."

"There, that's better; I'll soon be quite comfortable."

"We don't seem to be making much headway," Shad remarked, observing the shore after a brief lapse in conversation.

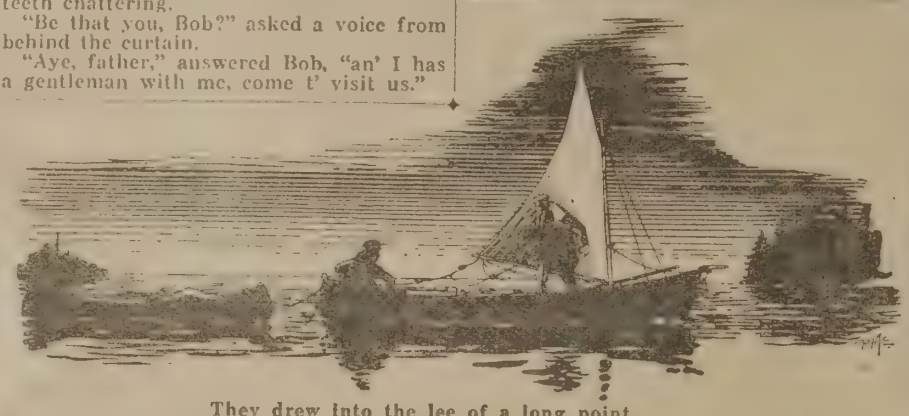
"No," said Bob, "th' canoe bein' awash 'tis a heavy drag towin' she, but we'll be in th' lee an' out o' danger o' th' sea smashin' she ag'in th' boat, an' then I'll haul she alongside an' bring your outfit aboard."

They were slowly approaching the south shore and presently, as Bob had predicted, ran under the lee of a long point of land, where in calmer water the canoe was maneuvered alongside, and Shad's outfit, so fortunately and securely lashed fast by Ed Matheson, was found intact, save the paddle which Shad had been using.

The things were quickly transferred to the boat, and, this accomplished, Bob bailed the canoe free of water, dropped it astern, now a light and easy tow, and catching the breeze again in the open, turned at length into Wolf Bight, where he made a landing on a sandy beach.

"That's where I lives," said Bob, indicating a little log cabin, sharply silhouetted against the moonlit sky, on a gentle rise above them.

When the canoe, quite unharmed, was lifted from the water and all made snug, Shad silently followed up the path and into the door of the darkened cabin, where Bob lighted a candle, displaying a large square room, the uncarpeted floor scoured to immaculate whiteness, as were also the home-made wooden chairs, a chest of drawers, and uncovered table.



There were two windows on the south side and one on the north side, all gracefully draped with snowy muslin. A clock ticked cheerfully on a rude mantel behind a large box stove. To the left of the door a rough stairway led to the attic, and the rear of the room was curtained off into two compartments, the spotlessly clean curtains of a pale blue and white checked print giving a refreshing touch of color to the room which, simply as it was furnished, possessed an atmosphere of restfulness and homely comfort that impressed the visitor at once as cozy and wholesome.

"My folks be all abed," explained Bob, as he placed the candle on the table, "but we'll put a fire on an' boil th' kettle. A drop o' hot tea'll warm you up after your cold souse."

"I would appreciate it," said Shad, his teeth chattering.

"Be that you, Bob?" asked a voice from behind the curtain.

"Aye, father," answered Bob, "an' I has a gentleman with me, come t' visit us."

They drew into the lee of a long point.

"Now that be fine. I'll be gettin' right up," said the voice.

"Put a fire on, lad, an' set th' kettle over," suggested a woman's voice, "an' I'll be gettin' a bite t' eat."

"Please don't leave your bed," pleaded Shad. "It will make me feel that I am causing a lot of trouble. Bob and I will do very nicely."

"'Tis no trouble, sir—'tis no trouble at all," the man's voice assured.

"Oh, no, sir; 'tis no trouble," echoed the woman's voice. "'Tis too rare a pleasure t' have a visitor."

Both spoke in accents of such honest welcome and hospitality that Shad made no further objection.

The fire was quickly lighted, and Shad, as the stove began to send out its genial warmth, had just removed his borrowed adicky when the curtain parted and Mr. and Mrs. Gray appeared.

"Mr. Trowbridge, this be father and mother," said Bob, adding as a second thought, "Mr. Trowbridge lives in Boston."

"'Tis fine t' see a stranger, sir," welcomed Richard Gray, as he shook Shad's hand warmly, "an' from Boston, too! I have hearn th' fishermen o' th' coast tell o' Boston more'n once, but I never were thinkin' we'd have some one from Boston come t' our house! An' you comes all th' way from Boston, now?"

"Yes," admitted Shad, "but I feel sure I'm causing you and Mrs. Gray no end of inconvenience, coming at this time of night."

"Oh, no, sir! 'Tis no inconvenience in th' least. We're proud t' have you," assured Mrs. Gray, taking his hand. "Why, you'm wet, sir!" she exclaimed, noticing Shad's clinging garments, and her motherly instinct at once asserted itself. "You must have a change. Bob, lad, hold th' candle now, whilst I get some dry clothes."

"Please don't trouble yourself. I'm very comfortable by the fire; indeed, I am," Shad protested.

But Bob nevertheless held the candle while his mother selected a suit of warm underwear, a pair of woolen socks, a flannel outer shirt, and a pair of freshly washed white moleskin trousers from the chest of drawers.

"These be Bob's clothes, but they'll be a handy fit for you, I'm thinkin', for Bob an' you be as like in size as two duck's eggs," she commented, looking the two over for comparison. "Now, Bob, light a candle an' show Mr. Trowbridge above stairs. When you're changed, sir, bring your wet things down an' we'll hang un by th' stove t' dry."

"You're very kind, Mrs. Gray," said Shad gratefully, turning to follow Bob.

In the attic were three bunks spread with downy Hudson's Bay company blankets, two stools and a small table. It contained no other furniture, but was beautifully clean. There was an open window at either end, one looking toward the water, the other toward the spruce forest, and the atmosphere, bearing the perfume of balsam and fir, was fresh and wholesome.

"I sleeps here," informed Bob, placing the candle on the table and indicating one of the bunks, "an' you may have either o' th' other beds you wants. Now whilst you changes, sir, I'll bring up th' things from th' boat. Here's a pair o' deerskin moccasins. Put un on," he added, selecting a new pair from several hanging on a peg.

Shad made his toilet leisurely, and as he turned to descend the stairs with his wet garments on his arm he met the appetizing odor of frying fish, which reminded him that he had eaten nothing since midday and was ravenously hungry.

In the room below he found the table spread with a white cloth. A plate of bread and a jar of jam were upon it, and at the stove Mrs. Gray was transferring from frying pan to platter some deliciously browned brook trout. Bob, with his father's assistance, had brought up Shad's belongings from the boat, and Richard was critically examining Shad's repeating rifle.

"Let me have un," said he, putting down the gun, and reaching for the wet garments on Shad's arm proceeded at once to spread them upon a line behind the stove.

"Set in an' have a bite, now. You must be wonderful hungry after your cruise," invited Mrs. Gray.

"'Tis only trout an' a bit o' bread an' jam an' a drop o' tea," Richard apologized, as he joined Shad and Bob at the table, "but we has t' do wi' plain eatin' in this country, an' be content with what th' Lord sends us."

"Trout are a real luxury to me," assured Shad. "We are seldom able to get them at home, and a trout supper is a feast to be remembered."

"Well, now! Trout a luxury!" exclaimed Richard. "About all we gets t' eat in th' summer is trout an' salmon, an' we're glad enough when th' birds flies in th' fall."

"What birds do you get?" asked Shad.

"Duck and geese, and there's plenty of partridge in the winter," explained Richard.

"An' I were thinkin', now, you might not care for un," said Mrs. Gray. "I'm wonderful glad you likes un."

Richard asked the blessing, and then invited Shad to "fall to," and frequently urged him to take more trout and not to be "afraid of un," a quite unnecessary warning in view of Shad's long fast and naturally vigorous appetite.

"Mr. Trowbridge wants me t' go on a fortnight's trip up th' country with he," remarked Bob, as they ate.

"A trip up th' country?" inquired Richard.

"Yes," said Shad, "a fishing and canoeing trip."

"But Bob's t' be wonderful busy makin' ready for th' trappin'," Richard objected.

"So he tells me," said Shad, "but perhaps if we talk it over tomorrow you can make some suggestion."

"Aye," agreed Richard, with evident relief, "we'll talk un over tomorrow."

When the meal was finished Richard devoutly offered thanks, after the manner of the God-fearing folk of the country.

The mantel clock struck 2 as they arose from the table. Dawn was breaking, for at this season of the year the Labrador nights are short, and Shad, at the end of his long and eventful day, was quite content to follow Bob above stairs to his attic bunk.

CHAPTER IV.

Away to the Trails.

Sunshine was streaming through the open south window of the attic when Shad awoke. Just outside the window a jay was screeching noisily. Bob's bunk was vacant. It was evident that Shad had slept long and that the hour was late, and he sprang quickly from his bed and consulted his watch, but the watch, flooded with water when the canoe capsized the night before, had stopped.

He paused for a moment at the open window to look out upon the near-by forest and expand his lungs with delicious draughts of the fragrant air. It was a glorious day, and as he left the window to make a hasty toilet his nerves tingled in eager anticipation, for he was at last at the threshold of the great Labrador wilderness—his land of dreams and romance. He was certain it held for him many novel experiences and perhaps thrilling adventures. And he was not to be disappointed.

His clothes, which Richard had hung to dry by the stove the night before, lay on a stool at his bedside, neatly folded. Some one had placed them there while he slept. He donned them quickly, and descending to the living room found the table spread and Mrs. Gray preparing to set a pot of tea to brew.

"Good morning, sir," she greeted, adding solicitously: "I hopes you had a good rest, and feels none the worse for gettin' wet last evenin'."

"Good morning," said Shad. "I rested splendidly, thank you, and feel fine and dandy. Whew!" he exclaimed, glancing at the mantel clock. "Twelve o'clock!"

"Aye. We was wonderful careful t' be quiet an' not wake you, sir," she explained. "'Tis well t' have plenty o' rest after a wettin' in th' bay. Dinner's just ready," and going to the open door she called, "Emily! Emily!"

A young girl, perhaps 12 years of age, quickly entered in response to the summons. She was clad in a cool, fresh print frock and wore deerskin moccasins upon her feet. Her wavy chestnut-brown hair, gathered with a ribbon, hung down her back; her oval face, lighted by big blue eyes, was tanned a healthy brown, and Shad thought her a rather pretty and altogether wholesome looking girl, as she paused in confusion at the threshold upon seeing him.

"Emily, dear, get Mr. Trowbridge a basin o' water, now; he's wantin' t' wash up," directed Mrs. Gray. "Mr. Trowbridge, this is our little maid, Emily."

"I'm glad to know you, Emily," said Shad courteously. "Have you quite recovered from your injury? When I was at Fort Pelican I heard all about you and your trip to St. Johns."

"I's fine now, thank you, sir," answered Emily, flushing to the roots of her hair.

"Yes, Emily's fine an' well now, sir," assured Mrs. Gray, as Emily turned to fill the basin of water. "But she were wonderful bad after her fall till she goes t' the' hospital in St. Johns t' be cured. They's a fresh towel on the peg above th' bench, sir, an' a comb on th' shelf under th' mirror by th' window," she continued, as Emily placed a basin of water on a bench by the door.

"Thank you," acknowledge Shad, turning to complete his toilet.

"Now, Emily, dear, call father an' Bob," said Mrs. Gray; "dinner's sot." And Emily, glad of a respite from the embarrassing presence of the stranger, ran out, presently to return with her father and Bob.

When dinner was disposed of, Richard suggested that it was "wonderful warm so handy t' th' stove," and leaving Mrs. Gray and Emily to clear the table he conducted Shad and Bob to a convenient seat near the boat landing, where they could enjoy a cooling breeze from the bay. Here he drew from his pocket a stick of very black and very strong-looking tobacco, and holding it toward Shad, asked:

"Does you smoke, sir?"

"No, thank you," declined Shad. "I had just learned to smoke when I entered college, but I was trying for a place on the 'varsity nine and I had to drop smoking. A fellow can't play his best ball, you know, if he smokes. So I quit before I formed the habit."

"Is that a game like snowshoe racin'?" asked Bob.

"Oh, no!" and Shad described the game and its tactics minutely, with thrilling details of battles that his college nine had won and lost upon the diamond.

"Well, Bob," Shad asked finally, "have you decided to go with me for a trip into the country?"

"I'm not rightly knowin,' sir, where you wants t' go," said Bob.

Shad stated the object of his journey, and the three talked over the possibilities of making such a trip as he desired within the time at Bob's disposal.

"Countin' on bad weather, 'twouldn't be much of a trip you could make in a fortnut, and that'd be th' most time Bob could spare, whatever, with his gettin' ready t' go t' th' trails," Richard finally explained. "His mother an' me be wantin' he home, too, till he goes, for 'twill be a long for his mother t' have he away without seein' he.

"Now you says you has no hurry t' go away. Dick Black an' Bill Campbell goes t' th' handiest tilt o' th' Big Hill trail t' help Bob an' Ed Matheson in with their outfit, an' they starts th' first o' August. Then they comes back t' take their outfits up an' they has t' get in before breeze up.

"You bein' in no hurry, sir, could go with un on th' first trip, an' come back

with un, an' that gives you a fine trip an' a fine view o' th' country. It takes un a month t' go in, but runnin' back light wi' th' rapids they makes un in a week, so you gets back th' first week in September month."

"'Twould be grand t' have you along, sir!" exclaimed Bob. "An' I were never thinkin' o' that. Father's wonderful at plannin'."

"Done!" said Shad. "I'll do it, but I hope you won't find me a nuisance around here during the three weeks we have to wait."

"Oh, no, sir!" 'Tis a rare treat t' have you visit us, sir!" protested Richard.

And thus it was finally decided.

Bob was very busy during the days that followed. Not only his provision and clothing supply for a 10 months' absence from home was to be made ready, but also the full equipment for the new trails to be established.

The necessary traps had already been purchased, but sheetiron had to be fashioned into stoves and stovepipe to heat the tents and log tilts, and one new tent was to be made. It was imperative, too, that each minor necessity that the wilderness itself could not readily supply be provided in advance, and that nothing be forgotten or overlooked.

The establishment of these trails was an event of high importance in the Gray household. Bob's little fortune of a few thousand dollars, derived from the salvage of a trading schooner the previous year, had been deposited in a St. Johns bank, and his thrifty old friend, Douglas Campbell, had suggested that it might be invested to advantage in a small trading venture.

"Bob can lay his trails this winter," said Douglas, "an' next year take some tradin' goods in. Knowin' th' Nascaupee an' Mountaineer Injuns, an' a bit o' their lingo, he'll be able t' do a snug bit o' tradin' with un, along with his trappin'. An' if you opens a little store here at th' Bight next summer th' rest of you can 'tend un when Bob's inside trappin.'

"I were thinkin', too," said Douglas, "'twould be fine t' send Emily t' St. Johns t' school th' winter, an' she'd learn t' keep th' books. She's a smart lass, an' she'd learn, now, in a winter or two winters, whatever, an' 'twould pay—an' do th' lass a wonderful lot o' good. I'm wantin' a trip t' St. Johns, an' I'd take she on th' mail boat."

There were many long discussions before it was finally decided that Bob should launch upon the venture. Bob's mother opposed it. The terrible winter of suspense when Bob, lost in the snow, was given up for dead, was still a vivid remembrance to her. She recalled those tedious months of grief as one recalls a horrid nightmare, and she declared that another such winter, particularly if she were to be deprived of Emily's society, would be unendurable.

But her objections were finally overcome. Emily was to go to school and it was decided Bob should establish two new trails. One of these he was to hunt himself, the other one Ed Matheson had agreed to hunt on a profit-sharing basis. Dick Blake and Bill Campbell—a son of Douglass Campbell—were to occupy adjoining trails, and the four to work more or less in conjunction with one another.

Shad and Emily became fast friends at once. On pleasant afternoons she would lead him away to explore the surrounding woods in search of wild flowers, and after supper he would tell her fairy tales from Grimm, but best of all she liked his stores from Greek and Roman mythology.

She, and the whole family, indeed, listened with rapt attention when Shad related how Chronos attacked Uranos with a sickle, wounding and driving Uranos from his throne; how some of the drops that fell from Uranos' wounds sprang giants, the forefathers of the wild Indians; how from still other drops came the swift-footed Furies—the three Erinnyes—who punished those who did wrong, and were the dread of the wicked.

Thus the days passed quickly and pleasantly—even the occasional foggy or rainy days, when Bob and his father worked indoors, and Bob, at Emily's request, recounted very modestly his own adventures. Emily particularly liked to have Bob tell of Ma-ni-ka-wan, an Indian maiden who nursed him back to health after Sish-e-ta-ku-shin and Moo-koo-mahn, Manikawan's father and brother, had found him unconscious in the snow and carried him to their skin wigwam.

"Th' Nascaupees was rare kind t' me," Bob explained to Shad. "They made me one o' th' tribe, Sishetakuskin calls me his son, an' they gives me an Indian name meanin' in our talk 'White Brother o' th' Snow.' They were thinkin' I'd stop with un, an' they were wonderful sorry when I leaves un t' come home with th' huskies. Manikawan were a pretty maid—as pretty as ever I see."

"Were she as pretty as Bessie, now?" asked Emily slyly.

"Now, Emily, dear, don't go teasin' Bob," warned Mrs. Gray.

"I were just askin' he," said Emily; "he's so wonderful fond o' Bessie."

"O' course he's fond o' Bessie, and so be all of us. Emily's speakin' o' Bessie Black, sir," Mrs. Gray explained, to Shad. "She's Tom Black's lass. Tom is th' factor's man over t' th' post, an' th' Blacks be great friends of ours. Bessie's but a young maid—a year younger'n Bob. You'll see th' Blacks when you goes over t' th' post with Bob."

"I'm immensely interested in your Indian friends," said Shad. "Manikawan was a little brick, and the Nascaupees bully good fellows. Will there be a chance of my meeting them?"

"No, they camps on lakes down t' th' n'uth'ard in summer," Bob explained. "If you was stayin' th' winter, now, you'd see un."

"I'm almost persuaded to remain on the trails with you all winter and see something of the life of real, uncivilized Indians," asserted Shad. "I would stay if it were not for college."

"'Twould be fine t' have you, now!" exclaimed Bob enthusiastically. "But," he added doubtfully, "I'm fearin' you'd find th' winter wonderful cold, an' th' tilts lonesome places t' stop in, not bein' used to un."

"An' your mother would be worryin' amout you; now, wouldn't she?" suggested Mrs. Gray.

"My mother died when I was a little boy, and father died two years ago," said Shad. "I have one sister, but she learned long ago that I could take care of myself."

"Is she a little sister?" asked Emily.

"Oh, no," said Shad, "she's a big, married sister, and has a little girl of her own nearly as old as you are."

"'Twould be grand t' have you stay," Bob again suggested.

"Thank you, and it would be grand to

You can now own a water system for less money.

BARNES & FISHER AUTOMATIC WATER SYSTEM

An Abundance of Water Day and Night

The B. & F. Automatic Water System is so reasonable in price, so simple in operation and so easily installed that no farm home should be without one. Don't be dependent upon some antiquated system of water supply when you can have a water system that will give you water when and where you want it. Three hundred gallons an hour at forty-five pounds pressure. Water for every purpose automatically pumped from well, lake, spring or river direct to open faucet. Runs on central station electric current or farm lighting plant. Write for descriptive bulletin and prices.

Barnes & Fisher Mfg. Co.

2931 1ST AVE. SO., SEATTLE, WASH.

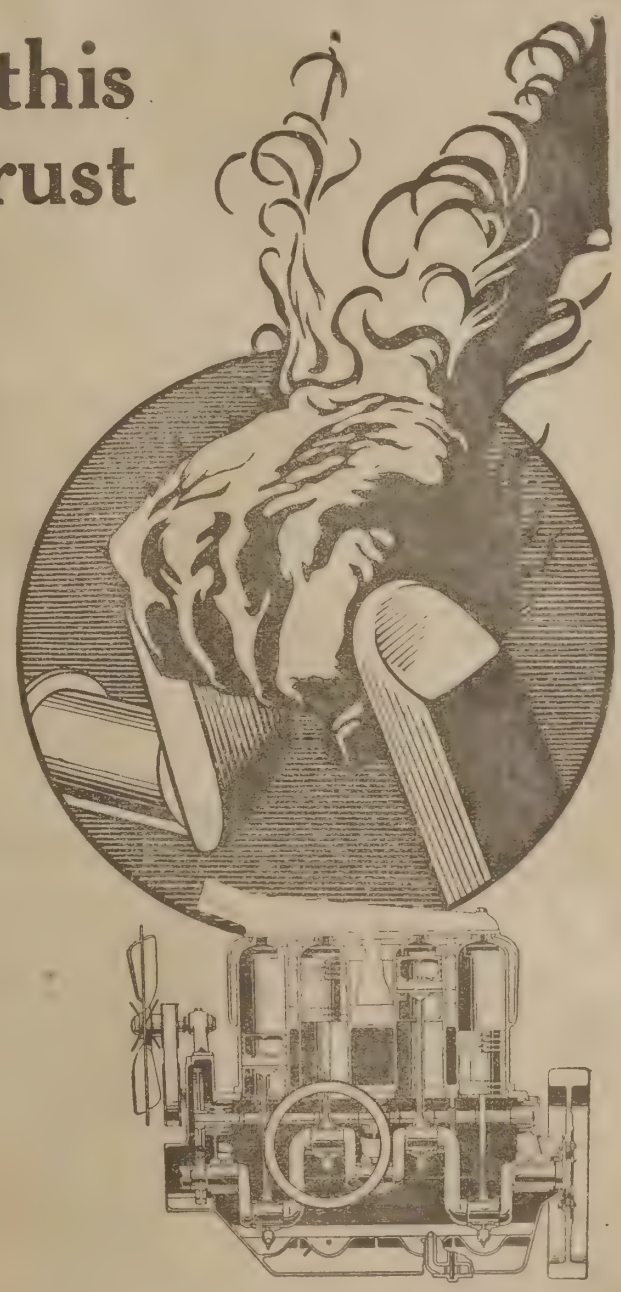
The department editors of this paper are anxious to be of service to you. Do not fail to write to us if they can be of help to you.

VEEDOL resists this mighty 2-ton thrust

30 times a second

YOUR engine turns over. The piston plunges downward with a mighty thrust on the bearing—a thrust caused by a two-ton pressure on a piston of average diameter.



And this takes place 30 times every second your four cylinder car is rolling along at 25 miles an hour. Think what the pressure must be in your truck engine or the laboring motor of your tractor!

A thin film of oil must hold those plunging surfaces apart even after the oil has endured the deadly heat generated by the explosion in the combustion chambers—heat as high as 1000 degrees at the piston head, and 300-400 degrees on the cylinder and piston walls.

Veedol is especially manufactured to resist deadly heat and friction. Veedol is a Pennsylvania base oil and is refined *more* than other oils by the Faulkner process. This exclusive Veedol process gives that *extra* heat resisting quality so necessary to perfect lubrication in a year when economical operation is imperative.

Veedol in your engine insures proper piston seal and full power; longer life for the oil and for your engine; protection for all moving surfaces and for your investment in your automotive machinery.

There are five Veedol oils, each different in body, but all of one quality. Go to your dealer. Consult the Veedol Chart on his wall. Select the Veedol Oil designated for your car, your truck, or your tractor. Use this oil and no other.

Let us send you a copy of our booklet "Facts you should know about lubrication."

There are Veedol Greases and Trans-Gear Oil for the differential, transmission, cups and springs of the motor car, truck and tractor.

FAMILY CIRCLE

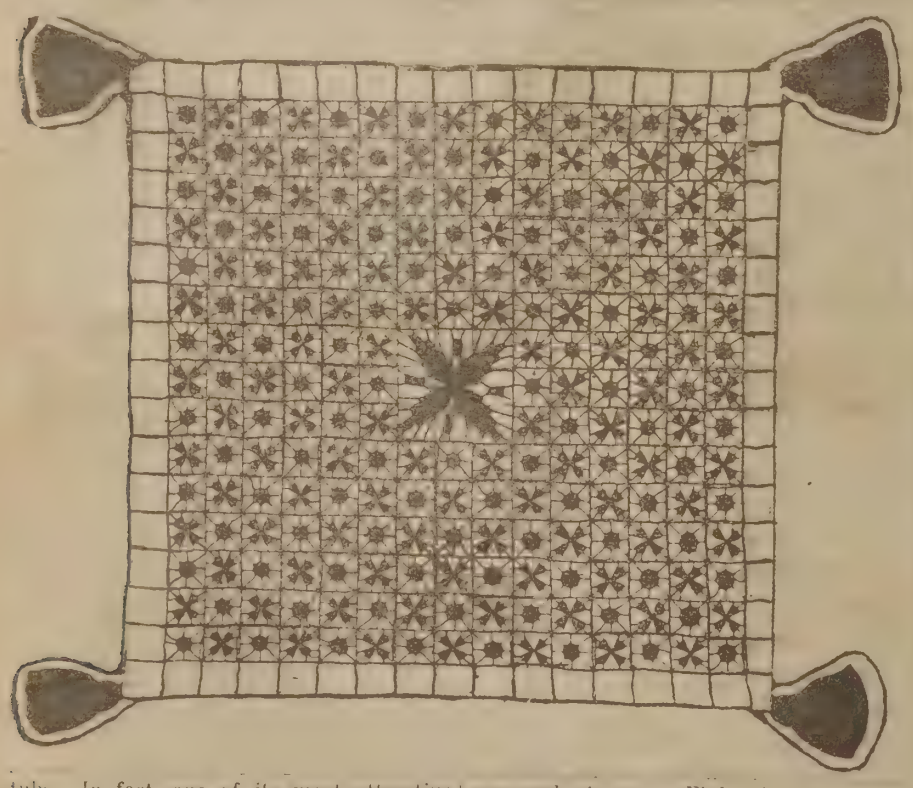
ALICE BARLAND
EDITORIAL CONTRIBUTOR

Dear Mrs. Barland: A while ago some one wrote about trouble with oily hair. I will give my experience as I believe no one ever has had more oily hair than I have. I have found what I consider best of all cure. I was advised 12 years ago to use sal soda in washing my hair, as it would destroy the oil, and I did so, washing it about once a month or 6 weeks. It did make it sweet and free from oil, but as time went on my hair began to split and die and turn red, until I decided about three months ago that I must do something different or lose it all. I have a heavy head of dark brown hair and I had it cut off to my shoulders. I bought two ounces of orris root for 20 cents and I sprinkle that all through my hair and afterward wash it out with a certain kind of soap. The powder dries the oil up completely and it is a fine thing for oily hair. MRS. W. W. HALL.
Route 2, Winlock, Wash.

Dear Mrs. Barland: I wonder if others of the sisters of the Circle have been doing something as foolish as I have with my cream. I have been putting my cream into the churn as I separated it and have stirred it daily and on the day I churn I have not put in that day's cream, but kept it for the next churning.

I had for my churning about two gallons of cream, from which I got five pounds of butter when salted. I left my buttermilk in the churn till next day and on looking into it closely and finding it seemed so rich, I thought I would churn it again and see if I would get any more butter. I did, and got three pounds more butter for my trouble. LILLIAN PARKER.

Dear Family Circle: I think this is a good time to warn you butter makers of the danger of this happening. This sister leaves the impression that cream should be churned twice. This shouldn't be necessary. Cream must go through the process of "ripening" before it will become butter; cream added the day before churning will not become butter, but will remain in the buttermilk. In winter it takes longer for the cream to ripen and must be kept quite warm to have it do so even in 48 hours, and no cream will ripen under that time. If a little sour buttermilk is added to the cream when you start a new churning it will hasten the ripening process.
A. W. BARLAND.



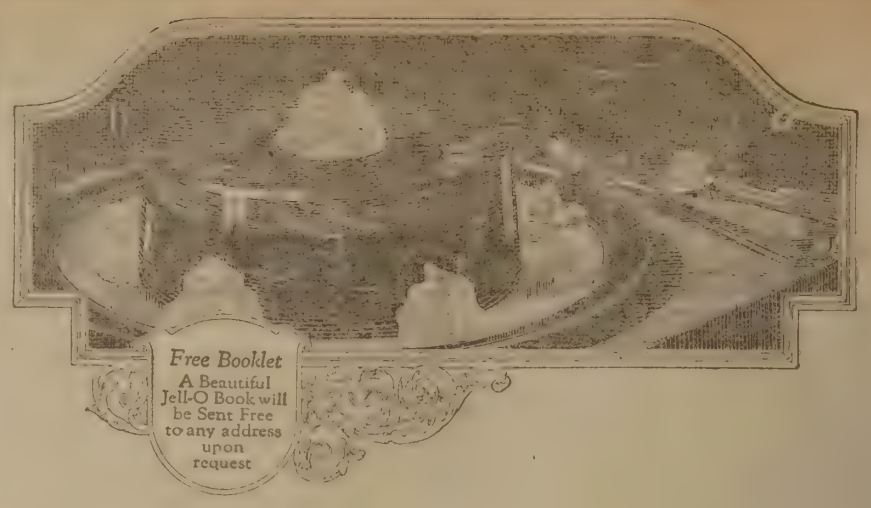
Cream Pie: One pint of milk, scald and thicken with 2 tablespoons of cornstarch dissolved in a little cold milk, yolks of two eggs and 1-3 cup of sugar, flavor. Bake a crust, fill with the custard and cover with the whites beaten stiff and brown in the oven. Add a scant half-cup of sugar to keep the whites from falling.
MRS. H. G. K.

Cream Pie: One quart rich milk, small lump of butter, 4 heaping tablespoons of sugar, 2 heaping tablespoons of cornstarch, 3 eggs (save the whites for meringue on top). I double this recipe, which makes 3 large pies or 4 medium ones. Mrs. Brent, I am sending this for you, do try it.
A SISTER FROM RANDLE, WASH.

Pillow Cover for Daily Use

By JEANETTE BELL.

This very practical pillow cover is at the same time inexpensive. For this the cross barred glass toweling is used. This comes in either red or blue stripes and is worked in single thread embroidery cotton to match. Each plain check forms the foundation of a woven square. Spider webs and Maltese crosses are alternated to form the square front of this pillow cover. The old time turkey red cotton, the kind formerly used for marking linens, is the best for this work. If this is not procurable get a cotton which is guaranteed to wash, as this cover is made for durability and will make many trips to the laundry



tubs. In fact, one of its most attractive qualities is the fact that it can be abused and knocked around more than any other kind of work and not show it.

You will observe that the spider webs form each corner and alternate with the crosses in every square except the center. This work is best done in close fitting hoops or in a square frame to prevent drawing the material.

For the spider web make one thread extend from one corner to the opposite corner, then one thread perpendicular through the center, then a thread from the next corner diagonally across to the remaining corner, then a thread from the center side to the center of the square, here join all the threads by a buttonhole stitch. Start to weave evenly round and round, drawing the thread tight at the center and gradually loosen as you reach the outer edge; this prevents cupping. Continue until you have covered about one-third of the space, then fastern your thread over the last stitch and bring your thread across to form the remaining stitch of the web, fasten securely at the back and cut thread.

For the cross, 12 threads are required for the foundation, three threads are used for each quarter. Make the threads equal distances apart, join together in the center and weave in the same manner as for the web, over the three threads to one corner, repeat three times to complete the cross.

The center cross is worked over nine squares of the material and two threads are used at once. Eight double threads are run for each corner, making 32 threads for all. Start at the center and weave with double thread until you have a circle about the size of a dime, then weave over eight threads for several rows, then drop one thread from each side, continue until at the top you have but two threads on which to weave, run the thread down the back of this portion to the center and repeat for the other three corners. Between the corners use one thread of each an dover these weave a separate portion. The tassels at each corner are made of yarn to match and are easily removed before washing. For these cut a piece of cardboard five inches wide, over this wind your yarn, cut at one end and tie, forming a tassel. This pillow is 18 inches square, but it can be made, the square of the width of the toweling, with back of same.

YOU get real satisfaction out of a dish of Jell-O. It gives the right touch to a meal, just light enough and just sweet enough.

No matter how heavily you may have eaten, you always feel the need of a dessert at the end, otherwise the meal seems incomplete. Jell-O fills that need exactly.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

I said that personal hygiene is a debt you owe society. You have not done your full hygienic duty to yourself and to others simply because you bathe regularly and brush your teeth several times a day.

Dr. Copeland.

Naturally, we think of water whenever we talk about hygiene. As a matter of fact, the state of civilization may be determined by the per capita use of water. When water is measured in terms of pints instead of gallons or barrels I am suspicious of the real cleanliness of the people.

Universal and daily bathing of the entire body is a modern practice. Visit the ancient castles and medieval palaces of Europe and you will be shocked by the absence or by the cruelty and inconvenience of the bathing arrangements.

Immediately somebody will say that the people of those periods were healthy and lived just as long as we do. In the first place, they did not live as long as the average man does now. The expectation of life is much greater today than it was in olden times.

They did have an advantage over us in one respect. Their food was much simpler. There were gluttons in high places, but in the common walks of life the fare was plain and wholesome.

The simpler lives and coarses foods gave them better teeth. Our denatured and soft dishes have caused suffering to teeth, which demand stern usage. Teeth are like savages. They sicken and die if denied the rough existence they were created to endure.

Heart disease is one of the few conditions causing an increased death rate in modern times. Without question many cases of heart disease can be traced back to diseased teeth. Rheumatism is a great factor in producing heart disease, and, in its turn, dental trouble is responsible for much rheumatism.

Foods should be chosen because, among other reasons, they contain the essential minerals. If you take this dish or that simply because "it looks so good," you will probably rob your system of needed sustenance. Too frequently attractive-looking food is long on looks and short on food values.

You must learn the importance of a well-balanced ration of properly cooked food. If you must choose between overeating and undereating, accept the latter at once. To leave the table with an unsatisfied appetite is pretty good practice, especially if it has been a hastily eaten meal.

Latest High Class Patterns for the Home

3801-3793. A Chic and Charming Design. Guimpe 3801 cut in seven sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. Dress 3793 cut in eight sizes: 34, 36, 38, 40, 42, 44, 46, and 48 inches bust measure. A 38-inch size requires 2 5-8 yards of 36-inch material for the guimpe, and 3 3-8 yards for the dress, of 40-inch material. The width at the foot is about 2 yards. Two separate patterns, 10 cents for each pattern.

3913. Lady's Dress. Cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38-inch size requires 4 3-4 yards of 44-inch material. The width at the foot is about 2 yards. Price 10 cents.

3919. Junior's Dress. Cut in three sizes: 12, 14, and 16 years. A 14-year size requires 3 3-4 yards of 40-inch material. The width of the skirt at the foot is about 2 yards. Price 10 cents.

3928. Misses' Dress. Cut in three sizes: 16, 18 and 20 years. A 16-year size will require 4 1-2 yards of 36-inch material. The width of the skirt at the foot is about 2 yards. Price 10 cents.

3234. A New Play Apron. Cut in five sizes: 1, 2, 3, 4, and 5 years. A 4-year size will require 1 1-2 yards of 36-inch material. Price 10 cents.

3582. Girl's Dress. Cut in four sizes: 8, 10, 12, and 14 years. A 10-year size will require 4 yards of 36-inch material. Price 10 cents.

DAIRY PROFITS—AND GOODYEAR BELTS

"Goodyear Klingtite Belts have increased the operating efficiency of my farm at least 50%. In a single day, I milk 40 cows and separate 1,000 lbs. of cream by Goodyear-belted machinery. My Goodyear Klingtite belting works perfectly in winter and summer. The Goodyear Dealer gives me belting service regularly."—ARNOLD FERN, Farmer, Baldwin, Wis.

On the lighter farm drives used in milking, cream separating, churning, water pumping, electric light generation and household appliance operations, Goodyear Klingtite Belts give the same smoothly powerful, trouble-free service they furnish in heavier farm duty.

They are obtainable in suitable lengths for these uses, and their special construction in each case is exactly suited to the task.

They transmit full power, evenly and surely. They hold the pulleys in a slipless grip. They need no breaking in, require no belt dressing, and work without stiffening, stretching or shrinking, regardless of changing atmospheric conditions. Their efficiency puts an end to belt troubles on the farm.

Goodyear Klingtite Belts are sold by your local Goodyear Dealer. They come in endless type also, for threshing, silo-filling, feed-grinding, and other heavy duty. For further information about them, write to Goodyear, Akron, Ohio, or Los Angeles, California.

High Points in News of the Week

The United States senate has set Friday of this week, March 24, as the date on which it will take its final vote on the most important of the seven treaties submitted to it for ratification by President Harding, following the recent international conference on the limitation of armaments. This treaty is the so-called four-power treaty between this country, England, Japan and France, looking toward the peaceable control of the various interests of these nations on the Pacific ocean. This treaty provides, among other things, that before any of these four nations shall go to war, a conference of the four shall be called in an effort to settle the misunderstanding peaceably. A reservation providing that other nations interested in any such dispute be called into the conference was defeated in the senate by a large vote. In order to dispose of this ratification question with the least possible delay, the senate has agreed to limit debate on the treaty itself and upon any reservations that may be proposed. The final vote will be taken when the senate meets on Friday, without any further debate.

* * *

At this writing, indications are that the lower house of congress possibly will pass the soldiers' bonus bill in about the form that it has been prepared by the ways and means committee. This includes the provision that certificates shall be issued to the service men which shall be presented to local banks throughout the country as collateral for loans until such time as the government redeems the certificates. This proposition has been vigorously denounced by the secretary of the treasury and is also known to be considered unfavorably by President Harding. It is freely predicted that the senate will refuse to pass the measure with this provision, some even going so far as to believe that the senate will fail to pass the measure in any form, for at least a few months. There is a widespread feeling, apparently on the increase, that the business conditions of the country are not such now as to stand the additional cost of a bonus bill requiring that several billion dollars be raised.

* * *

The bonus bill, as submitted by the committee, was estimated by Chairman Fordney to require the raising during the next 20 years of a little over $4,000,000,000. The principal part of this sum would be paid in the year 1943, when the certificates to be given to the ex-service men would mature in a sum totaling approximately $3,155,000,000.

* * *

Wenatchee fruit growers last week filed with the interstate commerce commission examiner at Seattle an application for freight rate reductions on the 1922 crop that would total approximately $3,000,000. The reduction is asked on about 15,000 carloads of apples that will be shipped out of the Wenatchee district if the yield is normal.

* * *

Secretary Davis of the department of labor in President Harding's cabinet is working out a plan under which the government and the general public would be kept informed as to the condition existing in each of the 32 leading industries of the United States. The purpose of the plan is to make it possible for both government and the people at large to know the exact situation in any industry when a controversy arises between employers and the employees. "As it is now," said Secretary Davis, "no one can tell which side to believe. There is propaganda sent out by both sides. Under the proposed plan the government, at the beginning of a labor difficulty, would give out an official statement which would form the basis for an accurate and just opinion."

* * *

The directors of the United States Grain Growers, Inc., met in Chicago this week for the election of officers and the conduct of other business relating to the operation of the organization. A meeting of the American Wheat Growers, Associated, the new organization formed to coordinate the activities of the various 100 per cent pooling associations, is also scheduled for Chicago this week.

* * *

There appears to be little inclination on the part of financial leaders in the administration at Washington to cancel the bill of $241,000,000 against the allies for the keeping of the American soldiers in the occupied territory of Germany. The maintenance of the American soldiers in the army of occupation was originally agreed to be borne by England, France and the other European allies, as the interests of America were not such as to warrant the retention of the soldiers there. Indications have come from Europe, however, that the allies expect this bill to be cancelled.

There are still in the occupied territory of Germany a little more than 2000 American soldiers. The number is gradually being reduced.

* * *

Chairman McCumber of the senate finance committee has announced that he expects to have the permanent tariff bill ready for presentation in the senate within a week or 10 days.

* * *

The middle west from the Mississippi to the Rocky mountains experienced a severe wind, rain and snow storm last week, the wind reaching 40 miles an hour in some sections.

* * *

Secretary Mellon of the treasury department intimates that approximately $460,000,000 will be collected by the federal government during the first quarter of the fiscal year from income and profits taxes.

Under Wapato Project

L. M. Holt, supervising engineer, estimates water is available for at least 5000 acres of new land under the Wapato project, in Yakima valley. Of this amount 2000 acres is on the island where a siphon was put in two years ago and another 2000 acres is made available by the draining of Mud lake, while 1000 acres is in the vicinity of Alfalfa, where a new lateral is about completed.

There was cropped on the reservation last year about 76,000 acres. Of this amount 70,000 acres is under the Wapato project and 4600 acres on the Ahtanum. The remaining 1400 is under the Toppenish-Simcoe project. Of the 5000 acres reclaimed by drainage or brought under new canals it is fair to presume that at least half of it will be added to the cropped area this season.

Winter Wheat and Rye

The condition of the winter wheat in Kansas has been improved by increased supply of moisture, although growth has been retarded by cold, says the United States board of crop estimates for the last half of February. Lack of moisture has resulted in a poor condition of the crop in parts of Nebraska, Colorado and New Mexico. Some damage from alternate freezing and thawing is reported in Illinois, Indiana and Ohio. Conditions are reported favorable in central Iowa, Georgia, North Carolina and Virginia. Lack of snow cover in the southern parts of Iowa and Wisconsin is detrimental to the growth of the crop. The condition of winter rye is generally favorable in the central states, although some injury from alternate freezing and thawing is reported. In eastern Colorado the condition is below normal, due to an insufficient supply of moisture. Injury from an ice sheet covering is feared in southern Wisconsin.

KEEP DRY AND WARM.

Little chicks should never get wet, either from rain or from poor drinking devices.

Will You Have a Home Like This One

It all depends on how you use your spare hours during the next few years. If you use them to put increased practical knowledge into your head, you can hope for increased responsibility, more congenial work and better pay. You will be able to have a home of your own and be proud of it.

There is an unusual opportunity right now for ambitious ex-service men to prepare themselves for bigger jobs. As long as the funds appropriated by the War Work Council of the Y. M. C. A. last, ex-service men may enroll for any of the practical United Y. M. C. A. schools' correspondence courses at one-half of the usual tuition rates.

United Y. M. C. A. Schools' courses, or positions for which the courses afford training:

Advertising Man	Highway Engineering
Agricultural Courses	Machine-Shop Practice
Auto Mechanic	Mathematical Courses
Banking	Plumber
Building Courses	Poultry Husbandry
Civil Engineer	Radio Operator
Civil Service	Salesman
Dairy Farming	Shorthand and Typewriting
Electrician	Steam Engineer
English Courses	Surveyor
Farm Management	Traffic Management
Farm Motor Mechanics	
Foremanship

375 Lexington Ave., New York, N. Y.

New 1½ H.P. CUSHMAN

For Light Jobs

A little wonder—regular Cushman quality, but at a very low price. Horizontal design, hopper-cooled, fewer moving parts. A real no-trouble engine for pumping, etc.

LIGHT WEIGHT 4 H. P.

For all power jobs up to 5 H. P. Weighs only 190 lbs. May be attached to binder and other machines to save a team. This engine is a necessity on every farm. Improved Throttling Governor insures very steady running and less gasoline used.

Ask for book on Light Weight Engines. If interested in Electric Lighting Plants, write for free book.

CUSHMAN MOTOR WORKS

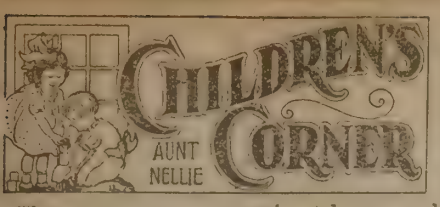
415 E. Ash Street. Portland, Ore.

What is a RAM?

A WATER operated engine that pumps water day and night for domestic or other use — no watching, *no operating cost.*

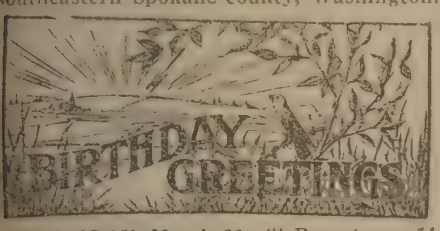
Capacities to 6,000 gallons per hour. Home supply or irrigation sizes.

You might use a ram. Our engineers will tell you. Free catalog. Seattle Machine Works, 126 W. Lander St. Seattle, Wn.



BURNS CUBOID SUPPORT

"Carries the *MOST* weight on these muscles"



strengthens muscles of feet and ankles. Relieves pressure off bunions, corns, calluses. Get a pair, $2.39. Any J. C. Penney Co. Department Store. Write for booklet. Factory, Albany, Ore.

Glance over the bargains on the "Want Ad" page.

There was once a man in a house and he couldn't get out. How do you suppose he finally got out? He took the measles and broke out. Robert Gilmore received his Junior Farmer and likes the stories, jokes and riddles in it. He says a number of children who live in western Lewis county, Washington, where he lives, get The Junior Farmer. Round as the sun and thin as a knife blade. What is it? A dime.

Aunt Nellie received a nice letter from Estella Wegner, who told us the story of "Narcissus," who stood on the bank of a beautiful stream and gazed at his own shadow in the clear water, thinking it was the image of a beautiful water nymph. He grew pale and thin until his breath departed and there, instead of a youth, grew a beautiful flower, with its head bent toward the crystal fountain. Estella was 10 years old March 14, 1922. Her home is in southeastern Spokane county, Washington.

THURSDAY, March 23—Si Bergstrom, 11 years old; Joel Hood, 8; Anna Jaklewicz, 9.

FRIDAY, March 24—Elsie Early, 7 years old; Gladys Moline, 10.

SATURDAY, March 25—Everil Godfrey, 9 years old; Vera Maxine McPherson, 11; Ruth Nauert, 9; Myrle Parfitt, 11.

SUNDAY, March 26—Arletta Borgman, 11 years old.

MONDAY, March 27—Ellen Larsen, 11 years old; Rheabe Catherine Malone, 8; Bernice Tobin, 11; Beatrice Warfield, 11.

TUESDAY, March 28—Frances Anderson, 10 years old; Clara Hellinger, 10; Henrietta Pinster, 10; Leonard Kinkaid, 11; Leona Barraford, 10.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Lavaid Skaug, Maxine Ahmart, Lilian Rinta, Carl W. Johns, Ruth Stark, Bernice and Doris Blanche Jones, Esther Smith, Thordis Pierce, Alma Laurene Stensaa, Clarence Breeden, Earl and Mildred Wuoriner, Alva Rotrah, Robert Franz, Bernice Dicken, Luella Jones, James Dicken, Anna Mae Tartar, Helen Richardson, Alma Marie Schneider, William Hays, James Akers, Jenny Johnson, Audrey Burnside, James Patterson, Bernard Kleinknecht, Howard D. Watt, Gladys McPall.

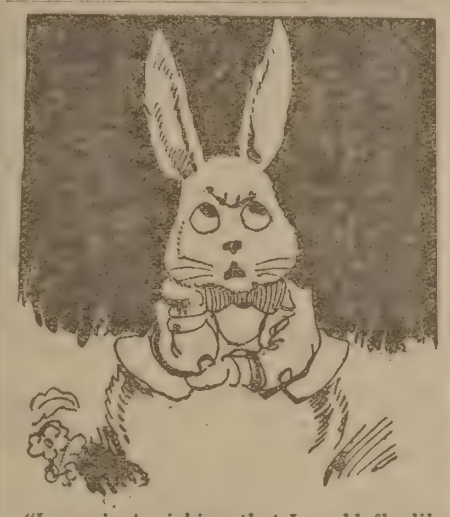
BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.



PETER RABBIT'S FOOLISH WISH.

Of course, Billy Mink had felt very foolish when Flitter the Bat had come sailing over the Smiling Pool. Billy wished that he hadn't boasted that he can do anything that any one else who wore fur can do. When he made that foolish boast he had not once thought of Flitter the Bat. Of course Grandfather Frog had chuckled and chuckled when he saw how foolish Billy Mink felt.

Peter Rabbit had laughed and laughed with all the other little meadow and forest people at the look in Billy's face when he first caught sight of Flitter the Bat. Then into Peter's head popped a funny little rime:

Doesn't like the sunshine;
Hangs up by his heels;
On the edge of darkness
Flitter darts and wheels.

Peter often had wondered and wondered how it happens that Flitter the Bat is the only one of all the little animals who can really fly. Now as he watched Flitter cutting up monkey shines over the Smiling

"I was just wishing that I could fly like Flitter the Bat."

Pool, Peter Rabbit suddenly gave a great sigh. Everybody heard it and turned to look at Peter.

"Hello, Peter. Do you feel as badly as all that?" asked Bobby Coon.

"No," replied Peter Rabbit. "No, I don't feel badly. I was just wishing—just wishing a foolish wish, that's all."

"You're foolish most of the time, aren't you, Peter?" asked Jimmy Skunk.

Peter Rabbit made a face at Jimmy Skunk, a good-natured face, you understand. "Anyway, I don't spend half my time wishing I could find some beetles and bothering every one I meet by asking them if they've seen any," replied Peter.

It was Jimmy Skunk's turn to look a little foolish, but he laughed with the others. Then he slapped Peter Rabbit on the back.

"Tell us, Peter, what that foolish wish is?" he cried.

Peter Rabbit smiled. "It's too foolish to tell," said Peter.

"Come on! Out with it!" shouted Johnny Chuck.

"Well, if you must know, I'll tell you," replied Peter Rabbit. "I was wishing that I could fly like Flitter the Bat."

Everybody began to laugh as they tried to picture to themselves how Peter Rabbit with his long ears and long legs would look flying, and Peter laughed, too.

Now Reddy Fox, who is very, very sly, as you all know, had been watching Peter Rabbit all this time and gradually creeping nearer and nearer. "Peter will never suspect danger here," thought Reddy Fox, and crept a few steps nearer. While every one was laughing at Peter Rabbit's foolish wish, Reddy Fox crept up behind a bunch of tall meadow grass just behind Peter Rabbit. Reddy began to lick his lips, for at last he had Peter Rabbit within reach. Just as Reddy prepared to spring, something black passed over his head and close to Peter Rabbit. A funny, squeaking little voice cried in Peter's ear, "Jump, Peter Rabbit! Jump!"

Peter jumped. He didn't wait to ask why. He did what he was told to do without waiting, and as he jumped Reddy Fox landed right where Peter Rabbit had been sitting. Then Reddy Fox started after Peter Rabbit, but somehow every one seemed to get in his way. He bumped into Baby Coon. He had to jump over Jimmy Skunk. He was tripped up by Digger the Badger.

Meanwhile Peter Rabbit had safely reached the dear old brier patch.

Who had told Peter to jump? Why, Flitter the Bat, of course.

How to Overhaul the Tractor

(Continued from page nine.)

order to let the oil get in good contact with the bearing.

The crankshaft bearings are adjusted in a similar manner. Adjust one bearing at a time with all other bearings slightly loose; then tighten all the caps and put in the cotterpins.

No owner of a tractor or car who does his own repairing should be without a set of bearing scrapers and a good oil stone to keep them sharp.

Before closing the crankcase, clean out thoroughly with kerosene and wipe dry. If the crankcase gasket is old, use plenty of shellac on the joints and tighten up at once.

The modern transmission case requires but little attention since the gears are cut and hardened and the bearings are as high grade as in a car. Run off the old oil and wash with kerosene and put in fresh oil, using the grade recommended by the tractor firm.

After the motor is reassembled, the proper clearance must be had between the push rods and the ends of the valve. When testing clearance be sure that the valve is on its seat. Each instruction book tells the exact clearance to give. Make this adjustment with care.

When ready to start the motor squirt plenty of oil into the compression space above the pistons, and give it plenty of time to work over the walls; for if not well lubricated, the motor will be hard to start. Then prime with gasoline at the spark plugs and away she goes.

Look over the clutch and brakes, if any, before you finish and see that they are adjusted to hold firmly. In the clutch it may be that the asbestos lining may need renewing, which is not difficult.

These are the more important items in overhauling the tractor. Other points come up as the operating season advances; but if the above mentioned items have been well looked after, a good year of work is ahead.

The Gaunt Gray Wolf

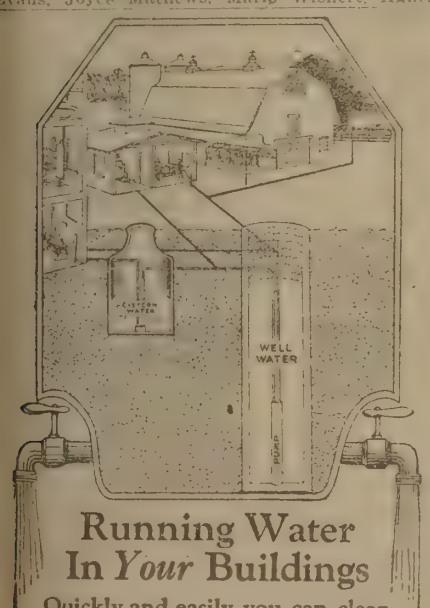
(Continued from page seventeen.)

stay, I'm sure, but," said Shad regretfully, "I can't do it. I must go back to college."

At length Bob announced one day that his outfit was completed and that all was in readiness, save a few incidentals to be purchased at the Hudson's Bay company's trading post, 15 miles across the bay. Shad, too, found it necessary to make some purchases preparatory to his journey to the interior, and the following morning the two sailed away in Bob's dory.

Tom Black, the post servant, welcomed them as they stepped ashore on the sandy beach below the post, and with him was Bob's old friend, Douglas Campbell, who stated that he had arrived at the post an hour earlier.

"I'm glad you come over, Bob," said he, as the four walked up toward Black's cabin "When I comes t' th' post this mornin' I were thinkin' t' go back t' Kenemish by way of Wolf Bight t' have a talk with you, but your comin' saves me th' cruise. Set down here, now, a bit, till dinner's ready I wants t' hear your plans for th' trails."



And while Shad was carried off by Tom to meet Mr. McDonald, the factor, Douglas and Bob seated themselves upon a bench before the cabin and discussed the proposed new trails.

"Now, Bob, 'tis this I were wantin' t' say to you, an' I weren't wantin' t' say it when your mother'd hear, an' set her worryin'," said Douglas finally. "Don't forget you're goin' where no white trapper was ever goin' before. You'll have to be a wonderful sight more careful than on th' Big Hill trail. Last year when I goes on th' Big Hill trail some Mingen Injuns come t' th' last tilt an' made some trouble, an' told me they'd never let a white trapper hunt th' country beyond th' Big Hill trail, an' you plans t' go, Bob. Now, if you works west'ard of a line from th' last tilt o' th' Big Hill trail an' th' river, be wonderful careful o' th' Mingens. They's a bad lot of Injuns."

"I'll be careful, sir," promised Bob, adding, however, "I'm not fearin' th' Injuns, though."

"You never knows what an Injun's goin' t' do," cautioned Douglas. "You was findin' th' Nascaupees friendly, but th' Mingens is different."

(To be continued.)

Running Water In *Your* Buildings

Quickly and easily you can clean your barn and stalls, your hog pens, your poultry houses and yards—when you have a Milwaukee Air Power Water System.

The turn of a faucet—and your stock gets fresh, pure water to drink—"direct from the well"—no water is stored in tanks by this system.

In your house—the many advantages of running water there are well known.

A simple machine, easy and cheap to operate, does the work—and will run your lighting plant if you want to add one later.

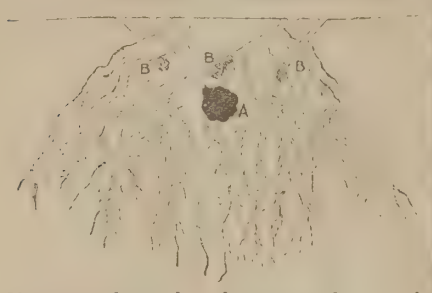
Clearing Land

(Continued from page three.)

practically the same today as it has been for a long time.



The dynamites and high explosive powders have little or no relation to black blasting powder. The first dynamite was made in Europe by mixing nitro-glycerine with a light spongy earth and packing the mixture in paper tubes as sticks of dynamite and powder are packed today.

Nitro-glycerine itself is a wonderfully efficient explosive when it can be controlled, but it is so dangerous and unstable that it must be mixed and treated to make it safe enough to handle.

Few blasting explosives contain no nitro-glycerine at all but many contain only 4 or 5 per cent of it.

The power of an explosive and its violence are two different qualities. The power or direct strength is due to the volume of the gases. The violence of the gases depends not on their volume, but on their speed. If they are comparatively slow in forming and in forcing their way out of their confinement they will break out large cracks and escape through them, pushing the material aside. If they are very fast or quick they will grind and pulverize everything they come in contact with and throw out the whole side of the confining material, but will not crack it so far.

In buying explosives look first to getting the one that is best suited for the work to be done and aside from that the cheapest one. There could be no object in using straight nitro-glycerine or a gelatine explosive when one of the ammonia farm powders would do the work, for the former explosive costs much more than does the latter. For example, for stump blasting in medium and heavy soils, wet

How to place the charges under semi-tap-rooted stumps. "A" shows proper position where one charge and cap and fuse are used. "B" shows proper positions of several small charges when electric blasting machine is used. Use either one or the other method illustrated—never both.

or dry, needs 20 per cent nitro-glycerine or ammonia dynamite or powder, is recommended, while for stump blasting in dry sand and other light soil a 50 per cent nitro-glycerine or ammonia dynamite or powder is recommended.

HANDLING EXPLOSIVES.

Dynamites and powders in boxes can be hauled freely in spring wagons. You should see that no bolt heads or other metal parts project from the wagon boxes to strike the boxes of explosives. Sweep all dirt out of the wagon. Have the beds clean or covered with straw or blankets.

Go over your wagon and harness before you load dynamite to make sure they will not break down while you have the explosive aboard. Be sure you have the hitching straps or tie-ropes along, and do not leave the horses standing without tying them securely. Break no colts while hauling explosives.

Keep the sticks of explosives in their original boxes until you are ready to use them. Don't have them around loose. In carrying them to the field, use a wood basket or a box and not a metal bucket. Always protect explosives from all possibility of being reached by falling sparks or from match heads or other source of fire. Rain, hot sun and the like must be kept away from explosives. Use care to lay sticks or set the boxes or baskets containing explosives where they will not fall down, be blown over by wind or knocked over by careless people or by animals. Cattle will eat sticks of dynamite or powder, because of their sweet and salty taste. The explosive will make them sick, sometimes kill them.

Since nitroglycerine often will cause headache when absorbed through the skin it is best to wear gloves when handling the sticks. For this same reason some people punch holes for caps in the sticks with a piece of wood rather than with the handle of the cap crimper.

Caps should not be carried in the same basket or box as explosive, but should be carried separately. Take only enough along to do the work in view and carry them in the tin boxes they come in. Many serious accidents have been caused by blasters having loose caps in their pockets during work or afterward. Sooner or later a chance jar is likely to set them off. When several caps have been taken out of the little tin box in which they come the rest will be loose and will rattle about. This should be stopped by filling up the empty space with paper.

The handling of caps is not dangerous provided you do it intelligently and with care. Keep them safe from any jars or heat. You can sometimes do many foolish things with dynamite and powder without serious results to yourself, but not with caps. Letting a cap fall to the ground or floor likely will cause it to explode. For this reason you should keep the caps and explosives apart, in hauling, storing and handling, bringing them together only at the last minute before you prepare the charge to be loaded in the hole. One cap can produce an explosion powerful enough to tear your hands off.

Electric blasting caps must be handled with the same care as regular blasting caps. All caps must be protected from dampness during handling. No trouble will be experienced if you use common sense at every turn, but thoughtlessness and carelessness in the handling of explosives will cause disaster. Bear in mind that when an accident happens with an explosive there is no time to save yourself, and no afterthought will prevent serious injury to you. Forethought is the thing with explosives. In an explosive, you are handling an enormous strength. The fact that it occupies small bulk now should not interfere with your imagining it as an enormous engine but under entire control if you do your part right.

BERKSHIRES SELL WELL.

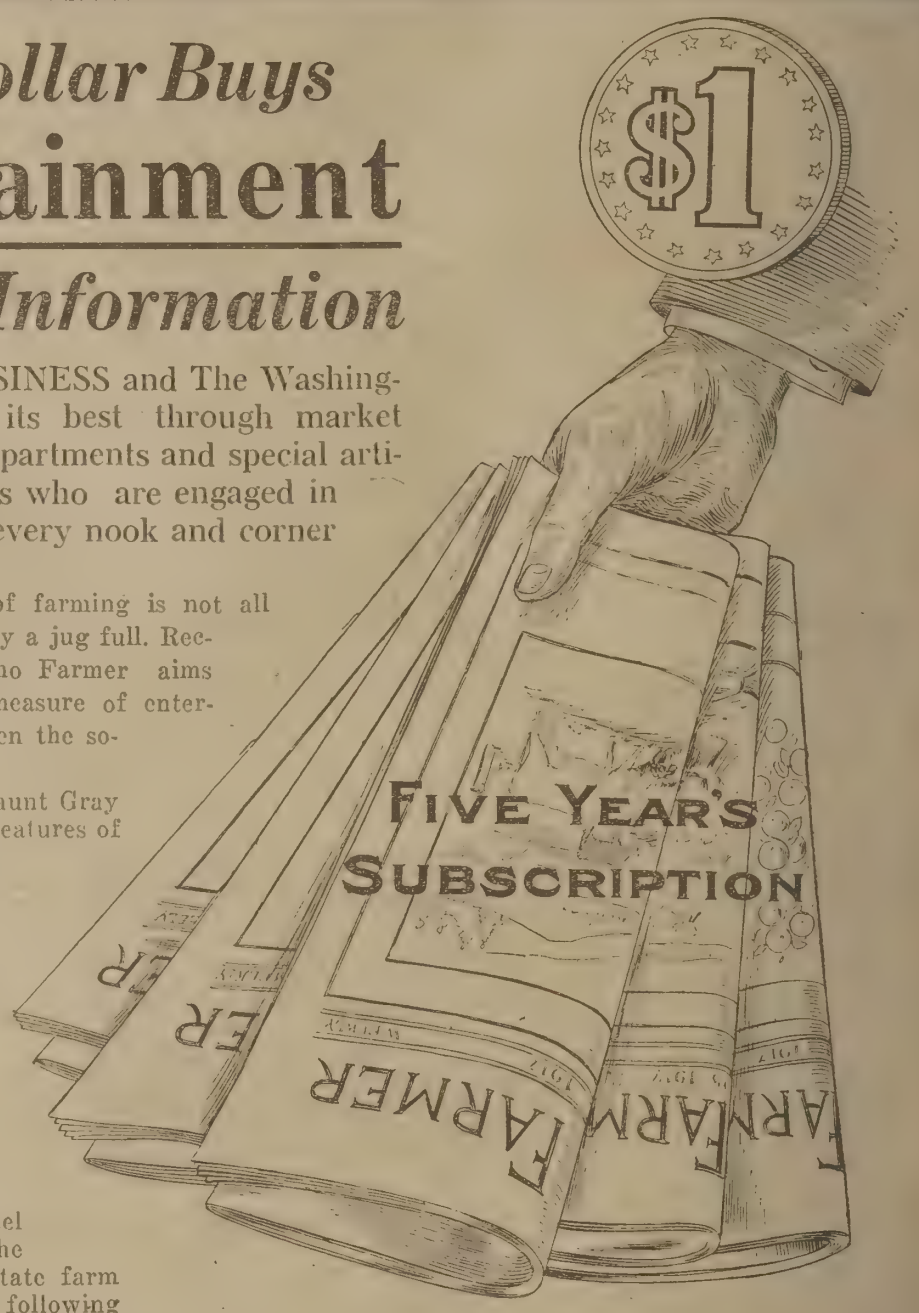
An average of $65 per head was received at the sale of Berkshire hogs on the Fred Sinnes farm, near Prosser, March 9. The animals were widely distributed, some going to Oregon, but many remaining in the Prosser and Yakima districts. A meeting of Berkshire breeders was held and a movement started to hold a Berkshire futurity at the state fair at Yakima next fall.

COMPLETES YEAR'S RECORD.

Skagit Kaan Marie, a Holstein heifer owned by Lee Brothers of Mount Vernon, Wash., on December 23 completed a year's record with 19,072.3 pounds of milk and 651.51 pounds of fat, or 814.39 pounds of butter to her credit. She also qualified in the 305-day division, with 17,665.5 pounds of milk and 738.35 of butter. The most remarkable part of her record is the fact that she gave birth to a living calf seven days after her full year was up. Lee Brothers have been breeding Holsteins about four years and began testing in

Your Dollar Buys

Entertainment



as Well as Information

FARMING is a BUSINESS and The Washington Farmer does its best through market quotations, regular departments and special articles to help its readers who are engaged in this vital business in every nook and corner of Washington.

However, the business of farming is not all there is to farm life. Not by a jug full. Recognizing this, The Idaho Farmer aims to give its readers full measure of entertainment, and to make even the soberest facts interesting.

Our new serial, "The Gaunt Gray Wolf," is just one of the features of an entertaining kind, none the less popular because it transports the reader into an environment beyond the range of his own daily life.

This story by an able writer, Dillon Wallace, is in its early chapters. You can easily pick up the threads with the instalment in this issue. If you do so, we feel sure you will enjoy the weekly visits of your state farm magazine even more for following the exciting developments of this story. Here is a story which in book form would cost you $1 or $1.50; yet is only one among a wealth of varied features in a magazine which costs you only $1 for five years.

We say to our friends: "Send your subscription order direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan an even greater success during the coming year than it has been in the past. Send in your order if you have not already done so, and let as many neighbors as possible know about our money-saving plan.

September, 1920. They have made 26 seven-day records. Every mature cow, except one that had her udder injured, produced over 25 pounds of butter, and four have exceeded 28 pounds.

JERSEY COMES FROM CONNECTICUT.

Sybil's Gamboge Pearl is a beautiful little Jersey heifer that journeyed all the way across the continent from Hartford, Conn., to Bellingham, Wash. She is probably the only daughter in the Pacific northwest of the noted $65,000 bull, Sybil's Gamboge. Pearl was purchased last summer at the Waulkley Bellows farm sale by Cyrus Gates, well-known financier and Jersey fancier of Bellingham. Mr. Gates left her to be bred and she made the long trip in November, arriving at her new home on the 10th. She was dropped August 15, 1920. She was bred to Sybil Gamboge 3d, said by Tom Dempsey and other good Jersey judges to be the best son of Sybil's Gamboge. Sybil's Gamboge, the sire of Mr. Gates' heifer, is not only the highest priced Jersey bull ever sold at auction, but he is by Imp. Royal Majesty and out of Gamboge Oxford Sybil, a great show and production cow.

NEW HOLSTEIN RECORDS.

Two new northwestern state leaders among Holsteins are reported. In Washington, Carnation stock farms, which only recently took the senior 3-year-old record from A. E. Smith of Sumas on Countess Matador Segis with 25.668 pounds of butterfat from 540.2 of milk in seven days, now brings out Highland Sylvia Segis Lady, which made 26.371 pounds in the same period from only six pounds more milk. In Oregon Henry McCall of Prineville wrests the junior 4-year-old 305-day championship from Berning Brothers of Mount Angel with a record by his Clothilde Hengerveld Soldene of 508.87 pounds of fat from 15,254.5 of milk. This animal displaces Model Segis Prilly Gelsche, which made 381.72 from 11,023.9.

Breeders' Dept.

Big Type Poland Chinas
My herd boar won the past two years at state fair. 50 bred gilts, young boars, weaned pigs. Live and let-live prices. Satisfaction guaranteed.
H. J. STILLINGS, Hermiston, Ore.

Big Type Poland Weaned pigs, 10 weeks old, $15 each. A few sows bred for summer litters; best of breeding.

220 Herefords at Private Sale at Very Attractive Prices

60 Splendid Bulls
10 to 16 months old; in good flesh; well marked and with strong backs, plenty scale and bone; good heads; low set and of pleasing quality.

60 Valuable Heifers
open and bred. Well grown, with quality type and character to suit particular cattlemen.

100 Dependable Breeding Cows 2 to 5 Years Old
Many with calves at side now and rebred. Others bred to our good herd bulls for spring calving. Cows sired by Beau Mischievous 7th, by Beau Mischief, by Beau President; Carlos 85th, by Beau Carlos 2nd, by Beau Carlos; Beau Gallatin 15th, a grandson of Beau President, and grand champion Idaho Start Fair for three years; Bonnie Lad, by Bonnie Brae 24th, out of Doncaster dam. These cows are bred to and their calves are by BEAU GALLATIN 15TH and CARLOS 85TH. The 60 bulls and 60 heifers are also by these bulls.

All are to be sold in lots to please the buyers. Don't Delay. Act today. Such opportunities are rare. Every animal guaranteed free from tuberculosis.

For 28 years Hereford breeders and ranchmen have drawn upon our great herd for breeding stock and range bulls. Our herd was established over 28 years ago in Eastern Nebraska and removed to present location 13 years ago.

A guarantee satisfactory to the purchaser goes with these cattle. If interested write us immediately for prices.

L. L. YOUNG & SONS, Nampa, Idaho.

let it mother your chicks

BABY CHICKS are frail little fellows. They must be fed and "nursed" and watched. For each fluttering bit of chick life represents a chicken. Each represents a future profit. Hence the right start means everything—to the chicks and to you.

Do you know what causes more chick deaths than anything else? Indigestion! For the digestive organs of the baby chick are just as delicate, just as sensitive, as those of the human baby.

Because we feel that nothing is good enough for a baby chick that is not clean enough for a human baby, *cleanliness* is our first consideration in the manufacture of SPERRY BABY CHICK SCRATCH. Cleanliness means a healthy flock—and that means healthy profits. That's why we take care that only prime, clean grains go into this feed. During its entire process of manufacture, the same absolute cleanliness is observed as in manufacturing SPERRY Red Package Cereals for your table.

Years of experience has taught us how to mix a feed with the same food values that the mother hen would scratch for her baby chicks on the open range. That's why SPERRY BABY CHICK SCRATCH is properly granulated and proportioned for fast-growing little bodies. Made of prime, re-cleaned seeds and cracked grains with a small percentage of high grade bone and charcoal—SPERRY BABY CHICK SCRATCH is the best feed-and-health insurance any poultryman can buy for his chicks. It gives them the sturdy start they need!

Remember, too, that SPERRY BABY CHICK SCRATCH is *absolutely gritless*. This means you do not have to pay a fancy price for shell and grit. You, yourself, can supply these more economically.

In the new edition of our booklet, "Makes Hens Happy," you will find quite a bit of help on feeding chicks—and grown-ups, too! Your copy is waiting for you—and it's free. Simply mail the coupon now.

Sperry Baby Chick Mash: This feed meets the demand of many poultrymen for a mash made up of ground grains and high-protein nutrients. It makes for rapid growth without overtaxing the gizzard and digestive tract of the baby chick. It should be fed in conjunction with SPERRY BABY CHICK SCRATCH after the first week. Your dealer has it—in 50- and 100-pound yellow-striped bags.

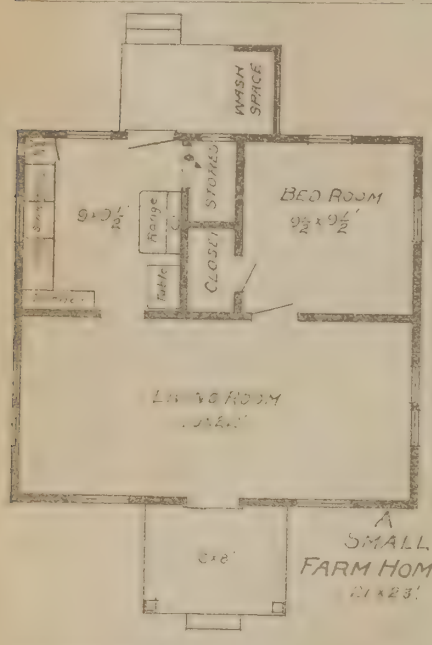
How Shall the Fruit of the Northwest Be Marketed?--Page 4

A Small Farm Home



By L. J. SMITH, Head Farm Engineering Department, State College of Washington.

Most ranchers starting out for themselves on an undeveloped piece of land do not wish to build an expensive home. They want a compact, yet serviceable plan, without frills and unnecessary expense.

The plan here shown is an attempt to meet the above conditions and cut the cost to the minimum. It is only 21x23 feet. There is no waste hall space. Every square foot is utilized. Though the house is so small, yet it has a large, comfortable living room, one end of which may be used as a dining room.

The kitchen has been carefully planned and the fixtures so arranged that the work can be done with the minimum number of steps. It has what every farm kitchen should have, a space for stores.

The bedroom is not large, yet it is larger than many bedrooms in our city apartments and has good light and cross ventilation and a fair-sized closet.

A SMALL FARM HOME. 21x23.

The roof may be either of the hip type or the ordinary type. In either case the pitch or slope should not be greater than one-third, to look well.

In studying a plan such as this, one must remember that it is not possible to secure all the desirable points in so small a plan. The ideal farm home has yet to be built. Even in a seven or eight room house it is almost impossible to include all the desirable features. One good point often crowds out another. In the small farm home, therefore, we must be satisfied with fewer conveniences.

Canadian Thistle

By E. G. SCHAFER, Department of Farm Crops.

Can you tell me of any method to exterminate the Canadian thistle?

Blaine, Wash. S. N. F.

The Canadian thistle is difficult to destroy because of its extensive root system and its ability to store up a large quantity of food in its roots. I can not tell you of any easy manner in which this weed can be destroyed. The Canadian thistle, as well as certain other perennial weeds, is becoming firmly established in many parts of the northwest. The tendency is for the infested area to become larger unless vigorous means are used for their eradication. If the patches exist in comparatively small areas I would recommend thorough clean cultivation. If this method is to succeed all above ground parts must be removed continuously so that the plant will starve because of lack of food which is prepared in the leaves. This means that the land should be cultivated at frequent intervals and that the plants should be cut off underneath the surface of the ground tw oor three inches, so that it would never appear above the ground from early spring until late fall. It is desirable that the conditions for growth be made as favorable as possible but that the plants be not allowed to appear above the ground. This will cause them to use up the plant food in attempts to grow more rapidly than if the plants were in a semi-dormant condition.

This method may not be economical for application on a large scale, but when the possible danger of further spread of the thistle is considered, I believe it is a proper method to follow.

PLANS FOR LABOR SAVING.

One of the persistent buyers of good Holsteins at northwest sales of the last few months is C. M. Seeley of Seattle, who is establishing at Minterbrook farm, six miles from Port Orchard, in Kitsap county, a modern certified milk plant, the buildings and equipment of which have been planned most advantageously for labor saving. The farm is one of 140 acres of bottom land on Minter creek.

The herd, which is under federal supervision, is headed by a son of Carnation King Sylvia, recently purchased from Carnation stock farms. His dam, Beauty Pietertje Segis Walker, is a three-quarter sister to Segis Pietertje Prospect, the 37-[illegible] cow, and herself has a 2-year-old record of 308.3 pounds of butter from 19,298 pounds of milk. King Minterbrook Sylvia Matador, as the herd sire is known, was a year old December 19, 1921.

The Ignition System

Please tell me the difference between a clockwise ignition system and a counter-clockwise ignition system and the working system of each. How can one tell them apart? H. B. M.

Rupert, Idaho.

Ignition systems are classified clockwise or counterclockwise depending upon which way the magneto turns. Looking at the magneto from the coupling end, if the coupling turns in the direction of the hands of a clock or watch, it is clockwise, or "right." If the coupling turns in a direction opposite to the hands of the clock, the direction is called counter-clockwise.

The magneto is not essentially different except that it is run in two opposite directions to meet the various motor attachment requirements.—L. J. Smith, W. S. C.

Guernsey Breeders Meet

Organization and election of officers, completion of arrangements for a carload of purebred bulls and an interesting program occupied the attention of Guernsey breeders of Thurston county at Olympia March 2. C. H. Bergstrom, formerly county agricultural agent, was elected president and C. C. Aspinwall vice president of the Thurston County Guernsey Breeders' association, and there were short talks by County Agent E. B. Stookey, Superintendent W. A. Linklater of the western Washington experiment station, Cashier Earl McCroskey of the Olympia National bank, and E. L. Westover, western representative of the American Guernsey Cattle club. Adjourning to the city library, members of the crowd saw the three-reel moving picture, "Guernseys in America."

NORTHWESTERN WHEAT SHIPMENTS.

Europe and the orient have about equally divided the shipments of wheat and flour from the northwest for the present cereal year.

MARTIN C. STOCKERT, Toppenish, Wash. I'll say The Washington Farmer is a good paper and a booster for the farmer.

The Washington Farmer is welcomed just as much by the wives and daughters on the farm as it is by those who hold the plow handles or who drive the big reaper. It devotes articles, pages and departments in every issue to the special field of women. It aims to lighten the work of those who must perform the endless tasks in the farm home, and to carry a word of inspiration and cheer to those who keep the wheels in the farm household turning smoothly.

The "Family Circle," with its constant interchange of experiences, ideas, opinions and methods, becomes more and more popular as the weeks pass.

The friendly interest of our women readers makes them warm adherents of our cooperative plan for securing and renewing subscriptions. Here is the idea. Many publications charge a high subscription price because it costs so much to gather the subscription orders. We eliminate the expensive system of having a force of agents go from town to town and from farm to farm to secure and renew subscriptions. Instead, we ask our friends to send in their own orders at least sixty days in advance of the expiration date stamped on the wrapper of your paper, and to include the orders of friends and neighbors with your own.

You get the benefit of the money saved by this economical plan. You receive this big, entertaining farm and family magazine for five years for only $1.

Continued cooperation is necessary. We hope to make 1922 even more successful for cooperation than the past years have been. Please do your part.

Subscription Rates to The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 years.
In Canada add 1 cent a copy for extra postage.

March 30, 1922.

THE WASHINGTON FARMER,

Review Building, Spokane, Wash.

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

I enclose herewith $.....for a.....year subscription to

THE WASHINGTON FARMER.

For Good Farming, Attractive Country Homes and Happy Country People

Poultry a Profitable Sideline in Yakima Valley

Keep 250 Hens in Place of 50 and Find Dividends Totaling $400 to $600 in a Year

By GEORGE N. ANGELL

"The farm bureau had everything to do with it. The real truth of the business is that the state association was not very enthusiastic about starting a branch in Yakima. The farm bureau called its attention to the possibilities here and finally secured its interest. Now the branch is a going concern."

I had expected, when I asked Manager A. S. Brown how much the county farm bureau had to do with the organization of the Yakima branch of the Washington Cooperative Egg and Poultry association that he would come back strong, for R. B. Coglon, then county agent, had "sicked" me onto him.

"What about the new poultry association branch?" I had asked Coglon.

"Go see Brown about that," he had replied, and had added, with a triumphant gleam: "Ask him what the farm bureau had to do with it."

So I had expected a strong come-back. I was not fully prepared for one of 1000 per cent, but it was a pleasure to witness it, nevertheless, for the mystery of why somebody hadn't bolstered up the poultry business in Yakima was one that had puzzled me for several years and to have the farm bureau come up to the mark of my desires in the fashion described by Brown was refreshing, to say the least. Moreover, it furnished another link in the chain of evidence which is being forged to prove that the farm bureau is some good after all.

Brown continued: "First, the bureau sent two representatives, Coglon and C. L. Smith, to the West Side to investigate. They went through King, Pierce, Lewis and Whatcom counties and came back very much enthused, but a request that the state board of directors set a minimum hen population for the establishment of a Yakima branch at first met a cool reception. Nothing daunted, they pursued the directors until it was agreed that 50,000 hens would suffice, and then they started after the hens. Several attempts were made through county and community poultry project leaders, but finally they asked for an association organizer for the job."

This is where Brown was injected into the situation, unquestionably for the situation's good. Brown was a poultryman at Yarrow, across Lake Washington from Seattle, who had "a little bunch of hens" and who, after 15 months' membership was thoroughly "sold" on the association. He was a salaried worker in Seattle when he started with 250 hens, but doubled the number when he found they would pay, and was devoting all his time to the small "ranch" when cooperation drafted him. He canvassed the entire territory of the prospective Yakima branch for nine weeks under the auspices of and in company with leaders of the farm bureau, and he did it for his modest expenses, though later he was allowed a small compensation. Ending just before Thanksgiving of last year, the campaign brought in the necessary 50,000 layers. As a result the branch was established; headquarters were opened in Yakima and the association is now accepted as part of the machinery of things on "produce row" at the county seat. If you don't believe it, read this quotation from a recent issue of a local daily:

> "Hens are going to work and eggs are going down in price. Yesterday's quotations at the Washington Cooperative Egg association branch office, located in the J. A. Sisler warehouse on Second avenue, were 34 cents a dozen for extra quality; 32 cents for firsts and 30 cents for pullets. Last week 154 cases of eggs were received at the association warehouse and the receipts are brisk this week, with over 100 cases received up to last evening."

The complacent reference to "extras," "firsts" and "pullets" is one that springs of knowledge recently acquired, for up to January 12 eggs were eggs in Yakima and grading applied only to apples and spuds. Now deft candlers sort receipts on the basis of weight and quality, and Yakima consumers know what to expect when they order a certain grade. Also, Yakima producers know what to expect when they deliver ditto. In this connection Brown chuckles at the recollection of four or five hens' nests, with from five to 12 eggs each cooking in the hot sun, in the orchard of a prospective association member he visited early last fall. "I told him he'd have to quit that, and he will if he gets anywhere with us."

"I didn't see how I possibly could take the management here, but they wanted me to do it, and we rented the ranch and here I am. Excuse me while I open the door and see what this fellow wants. It's Saturday afternoon and we're supposed to be closed, but we don't want to pass up any business."

Manager Brown impresses one as being that way, and one wonders whether the Sisler warehouse, even though it is 50x100 feet in size, will long remain too large for the association's requirements. Receipts increased from 79 cases of eggs the first week to 160 the second week in February, and would have increased much faster but for the fact that the larger poultry raisers were filling their incubators.

Two carloads of feed have already been handled and more will be unless valley dealers "listen to reason"; two expert candlers are kept constantly on the job; the membership campaign will be pushed right along, and it is the intention, as soon as demand warrants it, to establish a feeding and dressing station similar to those which have been so successful in western Washington. Two counties, Yakima and Benton, are included in the bailiwick of the association, with the Columbia river the southern boundary and the Yakima county line on the north.

From Prosser, Grandview and Sunnyside eggs come in and "empties" go back twice each week by truck, the shippers providing a central warehouse where they are stored for collection and distribution. A truckload arrived while I was waiting, and 44 cases were unloaded. The names of Outlook Supply company and Rufus Meyer of Outlook, and of O. G. Parfitt, H. C. Gest, M. B. Mitchell, E. C. Parfitt, F. A. Bridgeman & Son and Sol Kostenbader of Sunnyside were among those on the return tags attached.

Richland sends shipments by parcel post, Kennewick by express in individual shipments (truck service is planned here eventually), and producers from the valleys which are directly tributary to Yakima deliver their own eggs, for the most part at the Sisler warehouse. I talked with one of them from Moxee, who brought in two cases. He said that in his opinion the period in which the packers set their own prices for eggs has ended for keeps. Emphatically, the association is delivering tthe goods.

The Yakima market has proved a big help to this particular cooperative, for 90 per cent of the product is sold right in the county seat. Grocery men and hotels took readily to the idea of grading and have been doubling their original orders. All the first-class restaurants in the city are its customers and practically without solicitation. During the first month of business 125 cases were shipped out of the valley, 40 the first week to Seattle and 80 to Spokane, but "never again," says the manager. "They'll have to forget us until we're big enough to supply the home demand."

The government camp at Rimrock, a miniature city where a mountain gorge is being dammed for a new water supply, buys nearly all of its eggs from the association, its account running to $65 per week. The superintendent will increase his construction force shortly and wants 10 cases a day. He is well satisfied because the eggs meet government requirements as to grading and he will get the 10 cases.

The total hen population of the territory is 150,000 birds, mostly Leghorns, and it is estimated, from the interest taken in the business, that this population will increase at least 50 per cent in the next 12 months.

By express, by parcel post, by automobile truck and by henryford of the owner, eggs laid by 50,000 Yakima hens come in weekly increasing numbers to the local warehouse of the Washington Cooperative Egg and Poultry association, and a great awakening is taking place in the poultry industry. Forty-four cases came in this shipment from the "lower valley" and are being taken care of by J. E. Ballou, association candler and warehouseman, who is in the foreground. He was three years with Swift & Co. and has been five years with the Washington association, and he candles eggs so fast that you'd hardly believe it.

"My best argument to the farmers of Yakima has been poultry as a profitable side line," said Brown on his return from the warehouse. "I don't expect them to abandon fruit growing or hay raising for hens, but if they will modernize their plants and keep 250 hens where they now raise 50, with little more work they can be assured of weekly dividends totaling $400 to $600 in a year. This will pay the grocery bill in lean years and can be classed as 'velvet' in the fat ones, and no back bills to pay. While treating it as a side line, they must not give it secondary consideration, however. Hens must have care, and the plan that works best is for some members of the farm family to be held directly responsible for them."

Brown waxes enthusiastic over the possibilities of a dressing station. "It's perfectly apparent that all the money in geese and turkeys is in selling them dressed. You can't beat this climate for raising them—it's an impossibility on the Sound—and with an association dressing station in operation all the members would have to do would be to raise them to the fattening age. We would do the rest."

In regard to the handling of feed he asserts that the association is not in business as a feed concern, but has taken this step for the protection of its members. "If the feed concerns will supply us at the right price they'll not find us in competition with them. If local mills will prepare our mash at a Seattle price plus freight to Yakima, we will patronize home industry, and the same thing applies to grain. Considerable grain is grown in the valley; the association is composed of Yakima citizens, and it is right that they should spend their money at home. They have been robbed at home, however, and we intend to put an end to this."

Brown is a great booster for cooperation. "Stand by the association when it's right and right it when it's wrong," is his motto, developed from his observation that 90 per cent of the complaints about cooperation which he heard in the district are based on the fact that the faultfinder stayed at home and complained about some imaginary difficulty instead of attending the meetings and helping active members run the business.

Repeatedly during the campaign he proved his ability to draw and interest prospective members. On one occasion, which was typical, he started for an organization meeting at Naches Heights with D. J. Foster, community poultry project leader. Foster kept only 50 hens and was rather amused at being a project leader. Moreover, he made Brown no promises as to the number of people who would turn out. There were 40 people at the meeting, however, and they stayed until nearly midnight asking questions and offering objections which Brown answered and overcame. The next day two women came into the Yakima office to join the association, and one of them ordered an incubator. And he is generous. "C. L. Smith of Sunnyside spent 18 days with me riding over the hills, when he had to hire a man to take his place on the ranch," he said. "His work, not my canvassing, is responsible for the success of the organization campaign. All honor is due to Clyde Smith, and very properly he was elected a member of the board of directors for this district."

Locals of the association, clubs in which membership will be open to all interested in the poultry industry and through which the best practices in poultry husbandry will be disseminated, have been organized in Yakima, Sunnyside, Grandview, Prosser, Richland and Kennewick. "We are working right along farm bureau lines," said Manager Brown, "and incidentally we are doing all we can to promote its interests."

As previously stated, Manager Brown is batting farm bureau 1000 per cent.

Dairy Cow the Entering Wedge

In a recent address Professor E. G. Woodward, who is just now leaving the state college as head of the dairy department to enter private business in the east, declared that the dairy cow in numbers of from two or three to a dozen was becoming a necessity on the wheat farms of the Inland Empire. One of the reasons that he gave was that the gradual depletion of soil fertility from the continued production of wheat made the dairy cow essential as a fertility-restoring factor.

At this juncture a question was asked from the floor, "What appreciable effect would five milch cows have on the soil of a section of wheat land?"

Professor Woodward responded instantly that the cow herself probably would have comparatively little direct influence on the fertility of the soil, but that she was the entering wedge for the development of a better system of farming that would in itself maintain and build up soil fertility. Where the dairy cow is there must be pasture crops, such as clover or alfalfa, and silage crops, such as corn or sunflowers. Where the dairy cow is there must also be pigs and chickens to consume the skimmed milk. All these things tend to a diversity of interests and a rotation of crops that mean better soil conditions and better farming methods in general.

Mr. Woodward emphasized the value of a dairy herd on the Inland Empire farm as a means of providing labor the year round. He said that it was essential for the farmer to be employed 12 months of the year if his labor income was to be reasonably high.

He made it clear that he was not advocating the replacement of wheat farming with dairy farming in the Inland Empire, but that a few cows on every farm, together with the crop rotation necessary to their success, meant better wheat raising as the basic industry. He declared that there was not enough milk being produced in most sections of the wheat growing districts to satisfy local demands.

INTERSTATE FAIR HEADS.

President T. S. Griffith of the Spokane Interstate fair has announced the selection of John L. Smith of Spokane as superintendent of the live stock department for next fall's fair. Under Mr. Smith's supervision John Auld of Waikiki farm will have charge of the dairy division, John Napier of Hercules farm the beef division, B. A. Adams, Duroc swine breeder, the hog division, and John H. Roberts, formerly of the Spokane Union stockyards, the horse division. George S. Bulkley of Carnation farm, Seattle, will judge dairy stock. Other live stock judges have not yet been announced.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may have the unused portion of his subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1913, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on [illegible] columns.

Bedrock of Cooperation

Conviction is deepening in the minds of the fruit growers in the Wenatchee district that their fine industry will not be upon a sound footing until it is made completely cooperative for marketing as well as for production.

At the annual meeting of the Wenatchee District Cooperative association in Wenatchee last week a resolution was unanimously adopted favoring a selling organization owned and controlled by the growers, or the use of some selling organization in the east that would permit the growers' organization to control the sale of fruit at all times.

This significant resolution, it is understood, was prepared by a joint committee from the Skookum Packers' association and the Wenatchee District Cooperative association.

It should be apparent, after the experience of the past 20 years in the Pacific northwest, that there is urgent need for cooperative marketing as well as for cooperative production. So long as the cooperative production associations tie themselves up in contracts with private marketing agencies that are owned or controlled by distant eastern interests, they will see the great part of the benefits of cooperative production dissipated or passing to the pockets of the eastern marketing agencies.

California has pointed the way, has pioneered in the difficult field of cooperative marketing and made a brilliant success. Most of the staple products of the orchard and the garden in California, are cooperatively produced and cooperatively marketed. The objection is sometimes heard that it is easier for the growers of oranges and lemons to market their products cooperatively because the production of those fruits in the United States is confined to California and Florida. But the production of prunes is not confined to California and the prune growers there have a successful cooperative marketing association.

For that matter, if there are special difficulties in the way of marketing the apple and other fruit crops of the Pacific northwest, those difficulties must be faced by the private marketing agencies as well as by the cooperative marketing associations. The logical end of that objection would be a refusal of the growers to deal either with cooperative marketing associations or with private marketing agencies. The objection, therefore, is an absurdity.

It was a misfortune to the fruit growers of the Pacific northwest when the Crutchfield interests came into this field 10 or 12 years ago and undermined the producers' cooperative marketing organization, the old North Pacific Fruit Distributors. The result is that the orchard industry of the Pacific northwest is on the unstable foundations of 20 years ago, and it will remain upon those unstable foundations so long as it continues at the mercy of privately owned marketing agencies. These will continue in the future, as they have in the past, to play one district against another and one group of growers against other groups. They operate on the old Napoleonic maxim of "Divide and conquer."

It is conceivable that the cooperative producers and the private marketing agency might travel together harmoniously for a while, but it is inevitable that their roads will divide before long and then the private agency will look out for itself and leave the growers to struggle as best they can with bad markets and unprofitable prices.

Heartily Support Club Work

All over Washington boys and girls' calf club work is making rapid strides with the backing of organized adult breeders.

Cooperating with Holstein and Guernsey breeders of Yakima county, County Club Agent E. O. Scott is promoting several clubs on a 3-year basis, and Yakima banks have guaranteed financial backing to a total of $12,000 or $15,000. The Elk Boys and Girls' Dairy club of Spokane county is searching for a carload of registered Guernsey heifers for its members, and parents of members have organized a bull club and purchased from A. L. Gile of Chinook two fine sires by Langwater Traveler and out of tested dams.

The Whatcom County Guernsey Breeders' association is supporting club work wholeheartedly, and at one of its recent meetings the Hub Guernsey Calf club was present and competed for small prizes in a judging contest.

Nor are the Jerseys out of it entirely. In Pacific county the Naselle Calf club was organized with 11 members. This is an "exclusive" Jersey community, and nine of the members are to have grade or purebred calves of this breed. Francis O'Connor was elected president, Oscar Nasi vice president and Tauno Wiitala secretary. Those familiar with the district will recognize in this list the family names of established Jersey breeders who have been working for some time along herd improvement lines with County Agent Beck.

Value of Community Cooperation

As a practically 100 per cent perfect illustration of what a community can become as a breeding center, with the proper initiative and a little guidance, state live stock extension specialist C. M. Hubbard points to Kittitas county.

Here is a district that is becoming famous all over the country for its work with purebred Hampshire sheep. Where only a few short months ago there were not more than 40 ewes of this variety in the county, there are now 230, and where last fall Kittitas breeders consigned 50 rams to the annual sale at the Washington State fair, this fall they will consign 125.

There are two imported rams in the county, and through wholehearted cooperation, one foundation head of which is boys and girls' club work, Kittitas Hampshires are coming to be the synonym for the best that the breed has to offer.

A steady demand for well bred rams for range purposes is the solid foundation upon which the project is built.

Where Business Is Business

The president of the United Dairy association of Washington gives a lot of credit for the success that the united associations and the individual member associations have attained to the loyalty and hard work of their respective boards of directors. These directors in most cases are farmers who milk cows. Hence, they hold their meetings at night. When a directors' meeting is called it is like a good, old-fashioned country dance. It adjourns just in time for those attending to get home to milk the cows in the morning. At least, that is the reputation that President Scollard gives them, and he declares that whatever success the organization has attained is due to that spirit of determination, sacrifice and hard work.

State Farm News

Guernsey breeders of Thurston county formed an association, elected officers and laid plans for the purchase of a carload of cattle at a meeting recently held in Olympia.

The officers elected were: C. H. Bergstrom, president, and C. C. Aspinwall, vice president, both of Olympia.

The meeting was called by E. B. Stooky, county agent, and among the speakers were W. A. Linklater, superintendent of the western Washington experiment station at Puyallup; Earl McCroskey, cashier of the Olympia National bank, and E. L. Westover, Portland, Ore., western representative of the American Guernsey Cattle club.

* * *

W. T. Putnam, a Mason county farmer, who is the owner of Intermountain farm, near Lake Cushman, reports the purchase of a registered Jersey bull calf from a herd in the Willamette valley, Oregon.

* * *

During the month of January the output of butter at the Winlock cooperative creamery was 28,500 pounds. In January, 1920, the output was 19,000 pounds; in January, 1921, it was 22,000 pounds. Superintendent Andrew Anderson attributes the increase in a large measure to the better class of cows that dairymen about Winlock are keeping. Scrub stock is being rapidly replaced with purebreds and the result is making itself felt in a financial way.

* * *

County Agent Hupp is making arrangements for distribution of poisoned oats for the annual squirrel killing campaign in Pend Oreille county. A half mill levy was made last fall by the county commissioners for this purpose. Sixteen hundred ounces of strychnine alkaloid will be used and distribution of the poison to farmers will begin April 10.

* * *

Housewives of Pacific county are solidly back of County Agricultural Agent J. R. Beck, who with the help of Minerva Lawrence, home management specialist from the state college, is instituting a campaign to cut down housework. Mr. Beck is organizing testing circles in various towns, each circle consisting of six housewives. Then each circle is furnished with six labor-saving devices for housework. As each woman uses an article she passes it on to the next. If she likes the article she can arrange to get one.

* * *

Henry Huber has purchased the Sarah Burke place of 224 acres, just west of Vancouver city limits, for $25,000. The farm will be operated as a dairy farm by Mr. Huber.

* * *

Announcement was made in Seattle recently that the North Puyallup fruit cannery has been leased to Frank Collinson of the Starr-Collinson Packing company of Portland, Ore., and will be operated full time this season. The plant has an annual capacity of about 100,000 cases, and in the past has packed principally berries and rhubarb. It represents an investment of nearly $40,000, and is owned jointly by the Milwaukee and Union Pacific railroads, which financed its erection several years ago.

* * *

A meeting of farmers at Colfax has set the wage scale for common farm laborers at $1.50 a day and board; cooks, $25 a month and board; man and wife, $65 a month and board.

* * *

Boys and Girls' club week will be held from June 19 to 24, inclusive, at the Washington State college and will be attended by 145 boys and girls from the 29 counties doing club work in the state. The five club members representing each of the 29 counties will be selected by the state club leader in cooperation with the county club agent or county agricultural agent.

* * *

Almer McCurtain of Davenport reports that all winter wheat in that district which got a fair start in the fall, as a rule, is coming through in fine shape.

* * *

Coyote skins obtained by hunters employed by the state and federal government for the extermination of predatory animals have just been sold for $1640. A large proportion of the coyotes were captured in Adams, Grant, Franklin and Kittitas counties. The money reverts to the state's general funds.

* * *

The Skagit Canning company of Sedro-Woolley at its annual stockholders' meeting elected as trustees J. W. Norris and A. Larkin of Bellingham; F. A. Hegg, E. G. Ludwick and J. Newberg of Sedro-Woolley. F. A. Hegg was elected president and E. G. Ludwick secretary. The farmers are urged to put in a large acreage of beans for the cannery.

* * *

There is no retrenchment in hop acreage in the Moxee district this year, in fact a number of growers will increase their acreage and there even will be a hop house built this season, says a Yakima report.

* * *

Stanley Butchart of Sunnyside has associated himself with John L. Smith, veteran Holstein breeder of Spokane. Mr. Butchart has been breeding Holstein cattle in the Yakima valley for five years and during the last year was field secretary for the Washington State Holstein Breeders' association.

* * *

To determine the value of balanced ration in milk and butterfat production, eight cows belonging to the Christen brothers of Frances, Pacific county, are being tested. The cows are divided into groups of four each, one group being fed a balanced ration and the other a typical unbalanced one. At the end of the first month an increased production amounting to 900 pounds of milk and 45.7 pounds of butterfat was recorded in favor of four cows on the balanced feed. This increase amounted to $20.10, less extra cost for feed of $16.46, making a net gain for all four cows of $3.64.

Coming Events of Interest

The following schedule, in which the state college extension division and farm bureau are cooperating, has been arranged for squirrel poison mixing demonstrations Oakesdale; March 30, Tekoa; March 31, Farmington; April 3, Thornton; April 6, Rosalia; April 7, Pine City; April 10, Colton; April 11, Pullman; April 12, St. John; April 13, Steptoe; April 15, Fairbanks.

April 5—Pierce county poultry meet.
April 5-6.—Okanogan live stock meet-sale, Okanogan.
April 15—Stock show and mock sale, W. S. C., Pullman.
May 1-6, Tulip festival, Bellingham.
July 27-28, Whatcom co. Guernsey gallop, Bellingham.
April 16 - Easter.

FARM BUSINESS AND MARKETS OUTLOOK

The Farm Business Outlook

There is nothing resembling a boom on the horizon, but analysis of all the factors leads inevitably to the conclusion that a period of moderate expansion commonly known as "prosperity" is on the way.

Failure of prices on some farm products to maintain topmost levels is disappointing, but progress seldom continues long in one direction without temporary interruption.

Hogs and lambs were about as high as they could be expected to go and it is still too early for any dearth of wheat to exert its full effect on quotations. But even $10 hogs mean prosperity in the corn belt if costs are down and in spite of recent declines the entire agricultural price level is substantially higher than in December.

The index number of prices of farm products in February as prepared by the bureau of labor statistics was 126, compared with 113 in December, 1921, and the highest since February 1, 1921.

The general average of commodity prices has become relatively stable, with a slight upward trend. Dun's index number advanced nearly 7 per cent from July 1 to March 1 and Bradstreet's index, considered the most accurate forecaster of forthcoming changes in business conditions, has advanced 8.5 per cent from its low point last June.

Employment by manufacturers is on the increase, the March 1 totals as reported by the department of labor being slightly larger than on February 1. The iron and steel industries are operating at a rate about one-third larger than the average of last year. A number of auto companies report larger sales than a year ago. The building outlook is still very promising.

Car loadings, which usually decrease from December until this season of the year, have shown a rather steady increase in this period and are now larger than at this time last year or three years ago, indicating that a larger quantity of merchandise is moving through trade channels.

Bank clearings, which measure the purchasing activity of the nation as a whole, have increased until they are larger than at this time last year, the first time that this comparison has held good in a year and a half.

Prices of industrial and railroad stocks and bonds have advanced rather steadily since midsummer and stocks are nearly 25 per cent higher than at that time, thus furnishing an index of rising optimism in the future of industrial affairs and an increased supply of funds for investment.

Reserve ratios of banks have ceased to increase, indicating that the demand for money at current rates is growing and that business expansion has begun.

Foreign countries still have their troubles and exchange rates have passed through a sharp setback from which they are now recovering. There is less fear of a collapse abroad and more evidence of a return to sanity in handling their financial affairs than was the case last summer.

The coal strike threat is the bogy at the present time and opinions are widely at variance as to the danger from this source, but those who have been in close touch with the situation view it rather hopefully.

Cattle Market in Setback

The cattle market had a brief spell of indigestion recently when a moderate increase in supply appeared. The run at seven markets was the largest since the middle of January. About half of the gain in values during the last two months was lost, all classes participating in the retreat.

With the tax assessment date on the horizon, feed lots muddy, spring seeding operations about to begin and the fact that many cattle are nearly finished and show a profit on the outcome, the increased run was not especially surprising. A similar occurrence is not all uncommon at this season of the year.

Dressed beef prices declined 50 cents to $1 in eastern cities. Lent is a factor and the prospect of a larger supply pursuaded buyers to back away. Some cattle from eastern feed lots began to move, reducing shipper competition in the middle west and increasing the tonnage of beef. The general undertone of the market is healthy, otherwise such a prompt recovery as has taken place in the last few days would not have been possible.

A few prime yearlings are showing up and are selling at the top. Many half fat yearlings also are for sale, but these must compete with cheap light beef from other sources and such premature sales are disappointing.

The supply of beef usually declines from 5 to 10 per cent during the spring months when compared with receipts during February and March. This seasonal reduction may be more marked than usual this year, since the number of stockers and feeders taken to the country during the last five months has been below the average, they were lighter in weight than usual, the early spring supply of Texas beef promises to be small and cold storage holdings of frozen beef, which are generally put on the market during the spring, amounted to only 55,725,000 pounds on March 1, compared with a six-year average of 214,707,000 pounds.

Stockers and Feeders Cheaper

Stocker and feeder shipments have held consistently to about 50,000 head per week for some time, but when the fat cattle market weakened buying received a check and prices declined slightly, affording an opportunity for bargain hunters. Present signs are that all the thin cattle available will be wanted this year and there may not be enough to go around. Rains have greatly improved the pasture prospects in the big areas of Kansas and Oklahome, but little cattle trading has been done, operators balking at asking prices for both cattle and grass. Yearlings are priced as low as $27.50 in Texas, with 4-year-old steers, of which there are precious few, up to $60. The northwest range needs a lot of cattle, but lacks the money to buy and the courage to risk the outcome a year and a half hence.

Hog Markets Takes a Drop

Hog values ran into the first sharp break since late December during the last week, in which about $1 was lost. The market was topheavy and a moderate decline in demand for fresh pork, accompanied by a falling off in orders for hogs for eastern shipment, precipitated the break. The price-making function was left largely in the hands of big packers, whose orders always are to "buy them cheaper." Receipts of hogs have not been heavy. In fact, the run last week was the smallest since last November, but average weights have increased.

Pork consumption is not expected to fall off a great deal, although the higher level of prices probably was a factor in checking it to some extent. Weekly clearances of lard and meats for export are still outdistancing those of last year. Packers claim that these are to apply on old sales, but there is a general belief that when old sales are filled new ones will be made, so that clearances will continue.

Provision Stocks Below Average

Only a moderate quantity of hog meats and lard has been accumulated by packers thus far. March 1 holdings of various classes of hog meats in most cases were the smallest in six years, which is as far back as the records are complete, and lard stocks were the smallest with one exception in that period. Frozen pork, dry salt pork and pickled pork stocks aggregated 545,291,000 pounds, compared with an average during the preceding six years of 830,694,000 pounds. Lard holdings were only 61,258,000 pounds, compared with a six-year average of 103,465,000 pounds. With light runs of hogs the usual order during corn and oats seeding time, there will be little opportunity to pile up heavy stocks.

Lamb Market at Top

That lamb prices have passed the high point of the season is prevalent opinion in the trade, although the supply in sight for the next month is a light one and no great change in prices is expected. Warmer weather affects the demand for lamb and mutton, and southern California will begin to market her crop of January lambs before the movement from feed lots has entirely ceased. Heavy lambs are beginning to sell at a wider discount and the spread between shorn lambs and those still in the fleece is growing narrower.

Sentiment in the sheep industry is again enthusiastic and Colorado feeders are said to be contracting lambs for fall delivery at $11, which is twice as high as the initial prices last fall when the movement began.

Horse Market Steady

Prices for horses held practically steady during the last week. The Chicago market was less active, but St. Louis reported the best week of the season. Farm trade is still the principal support, although purchases from dealers who handle horses from the large markets must be made with cash and farmers are able to supply their needs in most cases through local public sales where they can buy on credit. Chunks weighing 1250 to 1350 pounds are bringing $125 to $150 at Chicago, with 1400 to 1600 pound chunks at $140 to $190.

Wool Prices Mostly Firm

Although the wool market has become a slow affair, values are firm for the most part and especially so for high-class wools. The auction at London continues with prices steady and in Australia some sales show slight advances, although others are at slightly lower rates than a month ago. In the west business is at a standstill, due partly to uncertainty over the tariff outlook. Buyers, of course, are hoping for a lower duty, while producers realize that they are in a position to obtain the full benefit of whatever protection is given them. The probability of a duty of 33 cents per clean pound on all but carpet wools is fairly good. The southwestern wools, which usually are sent to market during March and April when supplies are low, are being held back.

The woolen goods market is rather uneven, but for the most part it remains dull. Since October the activity of mills has declined about 10 per cent.

The Boston market is quoted as follows: Wisconsin, Missouri and average New England—1-2 blood, 38@39c; 3-8 blood, 37@38c; 1-4 blood, 36@37c; common and braid, 25@26c; black, burry seedy cotts, 24@25c. Scoured basis: Oregon—Eastern No. 1 staple, $1.10@1.12; fine and fine medium combing, $1@1.15; eastern clothing, 85@90c; valley No. 1, 90@95c. Territory—Fine staple, choice, $1.10@1.15; 1-2 blood combing, $1; 3-8 blood combing, 75@80c; 1-2 blood combing, 65@70c.

Wheat Demand Revives

Conditions which caused the decline in wheat prices during the last two and one-half weeks are believed to be largely temporary. With liberal quantities arriving in Europe and large amounts on passage for European ports, some of it still unsold, European buyers took advantage of the situation and dropped out of the market and made an involuntary bargain day for their own benefit. A sharp decline in foreign exchange rates also was a factor.

Aside from the improvement in the winter wheat crop in the southwest as a result of generous rains, the situation shows no material change. Europe must have a lot of wheat before next harvest and will not be able to keep her needs concealed, although by purchasing sparingly at times she may prevent the market from advancing much for the present.

Stocks in store in the United kingdom on March 1 were unusually low and even though wheat afloat for British ports has increased, the total is not a large one when measured by the records of the past and is only sufficient to supply requirements for a short period of time. Germany has been the most conspicuous buyer during the last week and is already purchasing for shipment from the new crop because of the attractive discounts on the July and September deliveries. She is buying some wheat for immediate shipment also, and was reported to have absorbed all of the cheap Argentine wheat which has been pressing upon the market recently. France is expected to buy about 12,000,000 bushels, Italian needs have not been fully supplied and Greece is expected to be in the market again within two weeks. With the large United kingdom wants as well as other importing countries still to be provided for, it is impossible to show any sizeable margin in the world's supply over probable requirements.

Crop reports from the southwest are favorable for the most part, as they show vast improvement over conditions a month ago. But it is still too early to form views upon the outcome as a good deal of wheat has received a poor start in spite of rains. Northwestern Kansas also failed to receive much moisture.

The domestic flour trade is picking up a little and mills have been more active buyers at Chicago, Minneapolis and Kansas City.

Rye, Corn and Oats

As a result of heavy European crops of rye export demand for that cereal has been rather sluggish and clearances up to March 1 were only about 13,000,000 bushels out of an exportable surplus of about 23,000,000 bushels. Clearances in the same period of last year were more than twice as large. In the last few days, however, European demand has increased sharply and it is now expected that this buying will continue until the available supply is exhausted.

Primary receipts of corn have declined about as expected and are now running the lightest since early December, when the new crop first began to move freely.

The oats situation is growing stronger as primary arrivals are much smaller than a month ago, while shipments from primaries have increased until they are exceeding arrivals during the present week for the first time this season. The visible supply has not been cut down a great deal, but if receipts and shipments maintain their present ratio inroads would be made rather rapidly.

Seed and Feed

Clover seed prices are remaining near the high point of the season, with red clover especially strong. A survey made by the department of agriculture indicates an increased demand for clover, alfalfa and timothy seed as compared with the spring of 1921. Toledo, per bushel—Prime red clover, $16.15; prime alsike, $11.80; prime timothy, $3.15.

Feed markets, especially wheat feeds, have become weak because of a slack demand. Flour mills are forcing bran and middlings on the market for 30-day shipment at lower prices and supplies seem to be accumulating in the east. Gluten feed and hominy feed did not advance as far as wheat feeds and demand has sufficed to maintain quotations. Cottonseed meal and linseed meal prices are steady, as available supplies are not large.

Prices per ton in carlots: Chicago—Bran, $26; standard middlings, $28.50; flour middlings, $31.50; cottonseed meal, 36 per cent, $46.50; 43 per cent, $52; hominy feed, $22; gluten feed, $32.65; old process oil meal, $54.50; tankage, $60.

Hay Receipts Remain Light

Receipts of hay at the leading distributing markets are still light, but are adequate to supply the trade at most points. Demand for better grades of timothy and alfalfa is satisfactory, but other grades are difficult to move.

Latest quotations: Chicago—Eggs—Miscellaneous, 22 1-2@22 3-4c; dirties, 20@21c; checks, 19@20c; fresh firsts, 22 1-2@23 1-4c; ordinary firsts, 21@22c. Live poultry—Hens, 26c; springers, 17c; roosters, 10c; ducks, 29c; geese, 16@18c; turkeys, 30c.

Egg Market Is Stable

Egg prices have held within a narrow range during the last week and sentiment is developing that the spring decline is about over. Prices for future delivery are now about the same as they were a few weeks ago. About 15 or 20 per cent of the receipts at the four leading cities is going into cold storage.

Receipts of dressed poultry at the four largest cities since January 1 have been 45,406,000 pounds, compared with 43,695,000 pounds in the same period of last year.

Prices per ton in carlots: Chicago—No. 1 timothy, $22@24; No. 2, $19@20; No. 3, $14@17; No. 1 light clover mixed, $21@22; No. 1 clover, $17@20; No. 1 clover mixed, $18@20; No. 1 alfalfa, $15@26; upland prairie, $11@15; midland prairie, $10@13; rye straw, $14.50@15.50; oat and wheat straw, $10.50@13.50.

Butter and Cheese

Consuming demand for butter has enlarged recently and prices have advanced at the leading markets. The improved demand was not confined to the large cities, but seemed to be general all over the United States. The larger manufacturers report an increase in the make of butter, but many creameries are shipping less to the central markets as local needs are taking a large share of the product.

Besides absorbing liberal receipts of fresh butter, large quantities are being withdrawn from cold storage. It is probable that prices have advanced nearly the limit, but as long as butter disappears at the present rate the market will be on a fairly solid footing.

Cheese markets have become sluggish, with the supply in excess of the demand, especially on daisies and to a lesser degree on twins. Longhorns are comparatively scarce, but prices have been inclined to lag even on this style.

What and How Shall Lambs Be Fed?

State College Experiment Station at Prosser Would Make Feeding of Sheep a Practical Science

By HOWARD HACKEDORN, Head of the Animal Husbandry Department, State College of Washington

Sheepmen of Washington have many good feeds from which to choose their feeding rations, some home-grown and some shipped in from other states. With a view to determining just which of these feeds is most economical in the fattening and finishing of lambs, an elaborate series of feeding experiments was recently completed at the Washington State college branch experiment station at Prosser, under the supervision of R. B. Bean, superintendent of the station, assisted by representatives of the animal husbandry department of the state college. The series of experiments culminated in the station's first annual feeders' day, March 7, when about 125 persons interested in feeding sheep and a number of others keenly alive to the importance of the general feeding problem, spent the day as the guests of Superintendent Bean and the commercial club of Prosser.

A feature of the day, in addition to a speaking program and a noon luncheon, was the auction sale of 1627 lambs fed at the station. Frye & Co. of Seattle were the successful bidders, taking the entire lot at $12.50 per 100 pounds, station weight, with a 4 per cent shrink.

The experiments covered such points as (1) the relative value of first, second and third cuttings of alfalfa hay and sweet clover hay; (2) the comparative results from liberal and limited grain feeding; (3) the value of beet molasses in the ration; (4) the value of silage, and (5) the value of cottonseed meal.

To carry out the feeding projects 1640 lambs were purchased from local breeders by Superintendent Bean, taking the "cut-back" lot of lambs from several bands. From this number 700 uniform lambs were selected for 14 experimental lots. The experimental lambs were sired by Hampshire rams and out of a class of ewes known as half-blood ewes, that is, a cross-bred ewe, sired by a mutton ram and out of a fine-wool base. All lambs were purchased in November and pastured on alfalfa until the last of December. Some hay was fed during the time the snow covered the pasture. The experimental lots of lambs were cut out and the lambs were started on their various feeds by January 1. The test officially began January 4. Three individual weights were taken at the beginning and the end of the experiment. All lots consisted of 50 lambs, selected as uniformly as to quality, condition and size as was practical.

The feed prices per ton used in this discussion are: First cutting alfalfa hay, $5 in stack; shelled corn, Eastern Yellow, No. 3, $27.40; cottonseed meal, $55; beet molasses, $14.80; corn silage, $2.50.

The Hay Comparison Tests.

The first block of four lots were devoted to the testing of the feeding value of the first, second and third cuttings of alfalfa and a first cutting of sweet clover hay. A summary of the results follows:

CUTTINGS OF ALFALFA HAY; SWEET CLOVER VERSUS ALFALFA HAY.

	Cuttings of Alfalfa Hay.			Sweet Clover Hay.
	First cutting.	Second cutting.	Third cutting.	First cutting.
Lot No.	I.	II.	III.	IV.
Initial weight	65.64	62.59	65.44	62.91
Final weight	80.97	75.46	79.55	80.55
Total gain	15.33	12.87	14.12	17.64
Daily gain	.255	.214	.235	.294
Daily ration—				
Grain	.745	.745	.745	.745
Hay—				
Fed	2.646	2.444	2.685	2.173
Refused	.419	.388	.455	.952
Feed per hundredweight gain—				
Corn (shelled)	292.19	348.14	317.14	253.37
Hay—				
Consumed	873.43	960.77	949.29	755.02
Refused	163.97	181.18	193.29	228.81
Appraised value per 100 pounds	$12.00	$11.80	$12.00	$12.00

The difference in feeding value of the first and third cutting is not marked, the first cutting ranking a little higher. If the price of $5 is placed on the first cutting, and $27.40 on grain, the third cutting would be worth $3.934 on the basis of feed fed. A little more hay was refused by the lambs receiving the third cutting. On the basis of feed consumed the difference would not be so marked. On the same basis as above, the fine leafy, very attractive appearing second cutting hay proved to have a value of only $2.87 per ton. All the hay was fed liberally and the lambs were not required to clean up the hay to the same degree that one would strive for with high-priced hays.

The sweet clover hay is of interest, as it may at times fit into a cropping system better than alfalfa. However, as a hay crop for a series of years, alfalfa has the advantage of being perennial. The sweet clover hay was of good quality. It had a pleasing odor and was relished by the lambs. The refused hay was higher with the sweet clover hay because of the coarse stems. Again basing the value of the hay on first cutting alfalfa hay at $5, this hay was worth $5.77 per ton.

The proportion of hay produced in the state of Washington is large compared to the grains other than wheat. So the hay as a rule will be relatively the cheaper feed. The lamb feeder is interested in utilizing a maximum amount of hay, in so far as he can get a satisfactory gain and finish on his lambs. The data accruing from four test lots of lambs receiving one-fourth, one-half, three-fourths and one and one-half pounds of shelled corn and all the first cutting alfalfa hay they would eat are presented in the succeeding table:

LIBERAL VERSUS LIMITED QUANTITIES OF GRAIN.

	Corn 1 1-2 lb.	Corn 1 lb.	Corn 3-4 lb.	Corn 1-2 lb.	Corn 1-4 lb.
Lot No.	V.	VI.	VII.	VIII.	XIII.
Initial weight	63.04	63.28	65.59	63.35	63.61
Final weight	84.14	81.24	79.79	76.14	76.79
Total gain	21.10	17.96	14.20	12.79	13.18
Daily gain	.352	.299	.237	.218	.220
Daily ration—					
Grain	1.354	.960	.745	.500	.277
Hay—					
Fed	2.428	2.374	2.528	2.625	2.789
Refused	.595	.455	.600	.415	.377
Feed per hundredweight gain—					
Corn (shelled)	383.67	321.02	314.32	229.35	135.90
Hay (consumed)	521.04	641.71	813.42	1013.73	1096.71
Refused	169.10	152.17	253.52	190.09	171.47
Feed cost per hundredweight gain—					
Basis feed fed	$ 7.001	$ 6.379	$ 6.985	$ 6.142	$ 4.904
Appraised value per hundredweight	12.50	12.25	12.00	11.35	11.25

This year's results with the prevailing feed prices show an advantage of profit (exclusive of rent and labor) with heavy grain-fed lots. At a cost of 7 cents per pound, the profit per head for the lot receiving one and one-half pounds of grain was $1.63; for the lot receiving one pound, $1.37; the lot receiving three-fourths pound of corn, $3.99, and $3.15 and $3.31 for the lots receiving one-half and one-fourth, respectively. With other prices remaining the same, but calculating the hay at $10 and grain at $30 per ton, the profit per lamb would rank in the same order, the difference in profit with the first two lots being only a few cents.

In sections where alfalfa is such an important crop as in Washington the economy of silage as a fattening ration for lambs is somewhat of a question. However, as hay prices advance the feeder is on the lookout for cheaper roughages. Four lots were fed silage. Two lots receiving cottonseed meal and two without it, and the grain was fed at the rate of one and one-half pounds per head daily and three-fourths pound per head daily. These lots can be compared with the hay and corn lots 5 and 7 receiving one and one-half and three-fourths pounds of corn, respectively. The silage was fed in the morning, after the lambs had eaten their grain. The hay was fed after the silage had been cleaned up. The silage was fed in the morning only, because this was more convenient.

VALUE OF SILAGE AND COTTONSEED MEAL.

	Corn 1 Hay	1-2 lbs. Hay Silage	Corn Hay	3-4 lb. Hay Silage	Corn 1 1-2 lbs. Hay and	7-CSM 1. 3-4 lb. Silage
Lot. No.	V.	IX.	VII.	X.	XI.	XII.
Initial weight	63.04	62.91	65.59	62.50	63.73	63.84
Final weight	84.14	87.18	79.79	82.41	87.24	80.52
Total gain	21.10	24.27	14.20	19.91	23.51	16.68
Daily gain	.352	.404	.237	.332	.392	.278

Refused	169.10	174.53	253.52	170.98	190.22	225.90
Silage	.....	335.36	.....	408.13	345.66	487.39
Feed cost per hundredweight gain—						
Basis feed fed	$ 7.001	$ 6.313	$ 6.985	$ 5.423	$ 7.042	$ 6.929
Appraised value per hundredweight	12.50	12.50	12.00	11.90	12.50	11.70

With silage in the ration the gains were greater than in corresponding lots receiving hay and identical grain rations. The cost of gains with hay at $5 and silage at $2.50 per ton was decreased by 69 cents per hundredweight in the lot receiving the more liberal grain feeding and by 44 cents with the lower grain feed. Since the appraised values of silage fed lots are practically the same as those fed straight hay, a greater profit from the silage-fed lambs was realized in this instance. With silage in the ration the lambs receiving greater quanities of corn made better gains and were in better condition than those whose grain feeding was limited.

By comparing the feed requirements per hundredweight gain of lots 5 and 9, in the foregoing table, with corn and hay valued at $27.40 and $5 per ton, respectively, silage is worth $6.44 per ton. This value may be largely attributed to the low grain requirement of the silage-fed lot. In the two preceding lots 1.354 pounds of grain were fed daily per lamb. In lots 7 and 10 only .745 pounds corn was fed. A similar comparison with these lots shows the silage to be worth $6.66 after making a correction for differences in appraised values. In connection with the limited grain feeding the silage valuation is $.22 per ton higher than with liberal grain feeding. This succulent roughage produced results above that due to its actual energy content.

Lots 11 and 12 were fed 1.354 pounds and .745 pounds of a seven to one mixture of corn and choice cottonseed meal in addition to alfalfa hay and corn silage.

In both of these particular test lots the addition of cottonseed meal to the grain ration in the proportion of seven parts shelled corn to one part cottonseed meal by weight produced negative results. The lots receiving the cottonseed meal did not gain as rapidly nor was their finish appraised any higher. At the cost of $55 per ton it increased the cost of 100 pounds gain by $0.72, comparing liberal grain-fed lots and $1.50 in the case of the lots receiving three-fourths pounds of grain. The extra good quality of hay, along with the fact that the lambs received a liberal supply of it, and were not forced to eat the stemmy parts partially explains the negative results with cottonseed meal.

The feeding pens and other equipment used at the Prosser station during the lamb feeding experiments were not different from those than any sheepman would use. These pictures were taken during the experiments.

Beet molasses is available at the beet sugar factories in the Yakima valley. In many instances the relative prices of molasses and grain are such that the former may be used economically to replace at least a part of the grain. During the recent feeding test this byproduct of sugar industries was valued at $14.80 per ton with corn at $27.40. Considering its content of 1.1 pounds of digestible protein and 57.1 therms of net energy per 100 pounds, as compared with 7.5 pounds protein and 85.5 therms for corn, this feed at the prices quoted has a place in a fattening ration. Other feeding results indicated that from one-third to two-thirds of of a pound could be safely fed. Its bitter taste and comparatively large quantities of free potassium and magnesium salts exert a strong purgative action on animals when fed in liberal quantities.

The lambs in lot 14 of the table below received molasses twice daily on top of the corn feed. The molasses was diluted with about three volumes of water to make it flow easily. Feeding molasses on hay was not as satisfactory, since the lambs in reaching for the leafy portions of hay at the bottom of troughs became covered with the sticky feed. In the quantities used during this test no digestive disorders were detected. The summary below shows the results of the trial. It shows strikingly the economy of producing gains by molasses feeding. However, in this case the gains made on the sweet feed are not as valuable from the butcher's standpoint.

BEET MOLASSES COMPARED WITH CORN.

	Corn	Corn and molasses

Feed per hundredweight gain—		
Corn (shelled)	383.67	267.78
Molasses (beet)	.....	135.44
Hay—		
Consumed	521.04	455.44
Refused	169.10	206.82
Feed cost per hundredweight gain—		
Basis feed fed	$ 7.00	$ 6.325
Appraised value per hundredweight	12.50	12.25

From these figures of feed requirements per hundredweight gain it is evident that on the basis of hay fed 135.29 pounds of beet molasses were equal in feeding value to 115.89 pounds of corn, plus 65.60 pounds of alfalfa hay. If corn and alfalfa hay are valued at $27.40 and $5 per ton, respectively, then beet molasses, on the basis of the foregoing figures and the difference in the appraised value per 100 pounds, is worth $20.80 per ton.

A more complete report of these tests can be secured in a short time by addressing Washington agricultural experiment station, Pullman, Washington.

Wheat Growers Divide

Disagreement Seen at Chicago; Poolers Make Progress

A year ago at the conclusion of a stormy session in Chicago the directors of the United States Grain Growers, Inc., buried the hatchet and dramatically held up their hands in solemn oath to banish personal interests in the conduct of the organization's business.

Last week the same board met in session probably no less stormy, according to reports from Chicago, and adjourned without the pledge of loyalty that marked the conclusion of the previous meeting.

It is apparent from reports of the meeting last week that there is a wide split in the United States Grain Growers, Inc. While it is difficult at this distance and this early to judge finally the cause and probable extent of the disagreement, it appears that the trouble has arisen over the optional pooling feature of the organization's contract. The direct sales plan and the pooling plan, both of which are provided under options in the contract, apparently have not worked out without some friction. It is also apparent that the methods followed and the ambitions displayed by some of the long-established farmers' stock companies of the middle west have not met with the approval of the more progressive growers who favor pooling, even to the extent of making it compulsory. The latter have sometimes claimed that some of the farmers' organizations who have affiliated with the Grain Growers have been looking toward their own profit as organizations rather than to the profit of the growers of the country as a whole.

Whatever may be the actual source of the trouble, a strong minority of the board of directors broke away from the meeting last week and held a meeting of its own, in which it threatened to participate no further in the movement "until such time as the injustice done" in the election of the new board of directors be undone. The election resulted in the selection of a board favorable to the administration of President C. H. Gustafson, who was later reelected. The minority that withdrew issued a statement in which it said that "no cooperative enterprise can succeed under caucus rule and that the unfair action of the board of directors must be fully corrected if the United States Grain Growers, Inc., is to succeed."

Pooling Movement Gains.

While this unfortunate friction is manifesting itself in the United States Grain Growers, it is apparent that the 100 per cent pooling movement is making progress. At the recent meeting in Denver steps were taken for the formation of an organization to be known as the American Wheat Growers, Associated. This organization would combine in one control the marketing activities of all the 100 per cent pooling organizations of the country, including the four northwest state associations, which pioneered the pooling movement and led in the formation of the new marketing organization.

This new organization is expected to have well toward 100,000,000 bushels of wheat pooled for orderly marketing during the coming season. The associations represented by it are reported to have a total of 60,000,000 bushels already signed up, of which about half is in the four northwestern states.

While no official information is available, it is not a far stretch of the imagination to see danger ahead for the parent organization in the withdrawal of the pooling faction in the United States Grain Growers, Inc., and the probable casting of their lot with the 100 per cent poolers.

Announcement came last week of the resignation of Aaron Sapiro as attorney for the so-called American Wheat Growers' association, the name of the pooling organization, with headquarters at Salina, Kan. This organization is one of those joining in the new American Grain Growers, Associated. The significance of Sapiro's resignation is not announced.

The Sore Shoulder

Handicap to the Farm Work Horse

By E. E. WEGNER.

The first indication that the shoulder has been injured is to be noticed soon after the collar has been removed. At this time the portion that has been bruised does not dry off as it should, but remains as a moist, cold spot, usually varying from a small spot to as large as your hand. This spot begins to raise as soon as the pressure of the collar is removed and within a few hours it has the appearance of a rounded swelling which fluctuates when the hand is pressed against it. It gives the impression of having fluid, within which is the true condition. The small vessels under the skin have been so injured that the fluids in them have been passed out under the skin and raised it up.

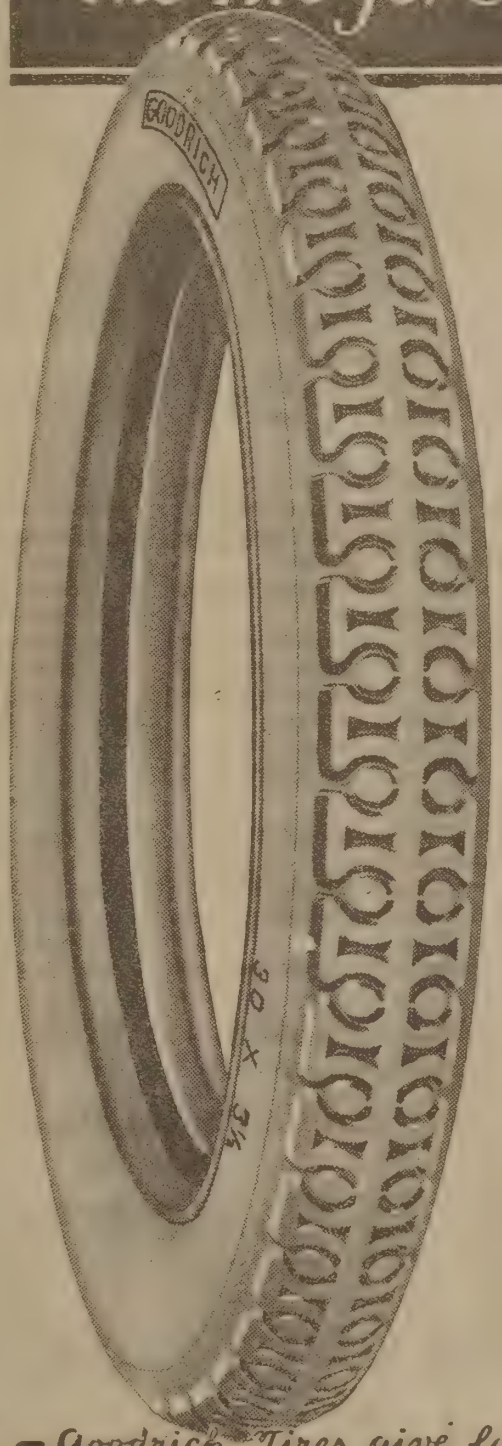
This rounded swelling remains until pressure is again applied, when it may be again forced out into the general circulation, but it returns as soon as the pressure is removed. Occasionally these fluid swellings can be successfully treated by light pressure and moist heat applied to the injured part if the treatment is applied early, but in the majority of cases draining them at the lowest point, and below the collar bed, is the best treatment. These drains must be kept open until the part is quite completely healed or the fluid will collect again. The opening for drainage should be low enough so that the scar is not where the collar will cover it.

If these fluid swellings are not treated the cavity of fluid remains for a long time and is finally absorbed, but in the meantime new tissues has formed within it and in place of the fluid there is a growth of new tissue which remains permanently as a thickening under the skin. This thickened place has to take most of the pressure when the collar is again applied and the result is that the skin is broken over it and a sore results, as the skin is rubbed off the elevated spot. Under most sores on the shoulder there is found this thickened area, which is responsible for most of the damage, and the thickening resulted from the original bruise. Many times these sore places heal normally when the animal is allowed to rest, only to occur again when it is again put to work. One may at times prevent the second injury by so arranging the padding in collar or collar pad so that this excessive pressure is removed. It means taking out some padding over the elevated area. Many times these sores can be healed while the animal is working by covering them with a protective dressing as is contained in some of the collar gall cures and particularly if the collar padding has been properly arranged. This method, however, may be only temporary, as care must be used permanently to see that this spot is not again injured.

Some of these swellings on the shoulders appear to go away during the season of rest, only to appear again as soon as the animal is put to work. It is not uncommon for an owner to watch the animal's shoulder and decide that the trouble has disappeared altogether after a rather long rest and be surprised to find it there again a few days after the animal is put to work. The only permanent cure is to have the animal treated during the season of rest, while the animal has no work to do for at least two months. It is then necessary to operate and remove the offending extra tissue; this can be done without making large wound, as a general thing, and probably is the best solution of the injured shoulder problem when they have reached a stage of thickening under the skin.

Yakima Dairymen's League

The owners of 1550 cows have signed up will the Yakima Dairymen's association, according to the report of W. R. McKenna, secretary. During the last two or three weeks signatures have been turned in at the rate of 40 cows per day, says Mr. McKenna, and he expects it will be but two or three weeks until "we shall have reached the 2000 mark." The secretary adds: "Without exception other dairy associations in the state have pledged their support and agreed to work with us in every way possible to make things a success here. According to the present plan our capitalization will be sufficient to finance the thing. Later on if we find it necessary to broaden out, we are assured it will be comparatively easy to increase our capitalization. Without doubt in the near future we will either have some of the officers of the United Dairymen's association to assist in working out details of our operations or else somebody from here will visit their plant in western Washington and get first-hand information on the manner in which they are meeting conditions similar to ours."



FIXING AROUND THE HOUSE.

There is still time to do some fixing around the house before the spring work begins in the field.

The Newest Goodrich Tire

Goodrich "55"

The Tire for Small Cars

30×3½ clincher fabric

$10.90

ALSO MADE IN 30×3

This is the latest addition to the Goodrich list of tires. It completes the line. It enables your dealer to give you full service under the Goodrich name and trademark.

It is great news for every user of 30 x 3½ clincher fabric tires. It is an opportunity to secure Goodrich quality—an assurance of Goodrich standards of workmanship and materials—with the advantage of a price which speaks for itself.

$10.90 will buy the Goodrich "55"—the new tire for the popular light cars. The splendid construction is made better yet by the thick anti-skid tread of scientific safety design, made of specially toughened rubber.

A Goodrich for $10.90! That means great value. Your dealer is ready to supply you.

Fruit Marketing

System Built Up Piecemeal

The present system of marketing fruit in the United States has been likened by Manager Charles H. Swigart of the Yakima Valley Fruit Growers' association to a dwelling that has been added to and "improved upon" as the family grew up through the years, with a lean-to here and a lean-to there, and here a wing and there a wing, until mother and the girls have come to regard it with loathing and despair, and even the old man, deep down in his heart, would like to touch a match to it and build a new one.

"That is about what we have in this machine for distribution," says Swigart. "It has been built up by evolution, as a matter of circumstance, not on any definite plan. It's a mighty inconvenient system and one that wastes money. We pass that over in good seasons, but in poor ones lost motion and extravagance cause growers to consider the problem. We would like to burn the old house and build a new one, but we can't do that. For some years to come we'll have the retailer, the broker and the distributor, and it's our job to figure out how to correct some of the existing evils. I say it's our job as producers, for the consumer has the remedy of not buying, as do the retailer and the carlot distributor, in turn.

"We have two opposing factors in the fruit marketing game. Some of us are sold on cooperation, but another set of men believe in the individual, competitive method. We have also four general steps in the progress of fruit from the producer's orchard to the consumer's kitchen. First, from producer to shipper, which may be a cooperative organization, an independent buyer or a consignment man. Second, to the carlot distributor, who may be a wholesaler or a jobber, but who is at the other end of the marketing chain. Third, to the retailer—the fruit stand vendor or the local grocer. Fourth, to the consumer. In these steps is tremendous opportunity for wastage, and it is a fact that 20 to 25 per cent of the fruit loaded on cars in this country is lost, chiefly from decay, before it reaches the ultimate consumer. Poor packing, poor refrigeration and storage, waste in markets from glutting—these are only some of the reasons for it—and a great deal of it is preventable and must be prevented

"On the other hand, over 105,000 carloads of apples are distributed in the United States, and what with these and the citrus fruits, the total to be distributed by an unorganized system is an enormous one. With no method, it is a wonder we do not lose a half instead of a quarter of our product. Considering the circumstances, the system has done wonderful work, but it should and can be made more efficient.

"Standardization of grade and pack is one of the first things to undertake. Extra fancy must mean the same whether the apples are from Hood River or Wenatchee. To accomplish this we need not wait for national action—a little cooperation between state legislatures would accomplish a great deal. We must, however, have national inspection service to back it up. For this better support of the United States bureau of markets is demanded, and the bureau is the logical agency for the collection of information regarding population, consumption, etc., which we need so badly and which cooperative organizations have done something to obtain. But what organization in the entire country is strong enough to gather all that we require?

"I see no way to effect further savings until we become big enough, wise enough, to sink our petty jealousies in local organizations and see that they join others in control of distribution to markets where our stuff is needed. The apple growing industry is highly specialized. It is more like a manufacturing industry than any other of an agricultural nature. If its backers would get together in a large organization, they could cut out items of waste, secure such storage as they need, and obtain plenty of capital. We have talked about these things for years, but have never got any further. It is up to the growers to see that their organizations get together."

The present fruit marketing situation, into which the growers of this state were thrown recently by the resignation of officers of the Northwestern exchange and the threat of the local units of the Skookum Packers' association to get out from under Crutchfield control, shows little change. It is not finally known yet whether these Skookum units will complete their membership cancellation before May 1, the last date on which cancellation may be completed.

It is interesting to note the competitive activities of various fruit marketing organizations seeking tonnage of Washington apples for the 1922 season. The Di Giorgio Fruit corporation is the latest to enter the field. The appearance in the state of C. J. Brand, vice president of the American Fruit Growers, Inc., the producing and marketing organization of the Crutchfield, is being studied by growers as a significant feature of the situation. The American Fruit Growers' concern is the producer and seller of he Blue Goose brand of apples.

TREES FOR DISTRIBUTION.

In order to encourage the planting of trees on the farm for the production of wood and for windbreak and shelterbelt purposes, the forestry department of the State College of Washington, Pullman, is making available to the people of the state, at a price just equaling the cost of production, a limited number of trees of the species best suited for the purposes. A few of the species available are also suitable for street, roadside and ornamental planting.

Prices range from 2 cents each for black locust seedlings, 12 to 18 inches high, to 60 cents each for some of the finer and larger specimens of other species.

If interested a postal card request will bring you a list of those species available, together with a few hints on what to choose for particular localities and situations.

Dairy Industry

Watches Association in This State

A. J. Glover, editor of Hoard's Dairyman, made an extended trip to the Pacific coast a year ago, paying special attention to cooperative organizations in the dairy industry.

Knowing that Mr. Glover was greatly interested in this subject, a marked copy of The Washington Farmer of March 2, containing the outstanding article by J. A. Scollard, president of the United Dairy Association of Washington, was sent him.

In reply Mr. Glover writes:

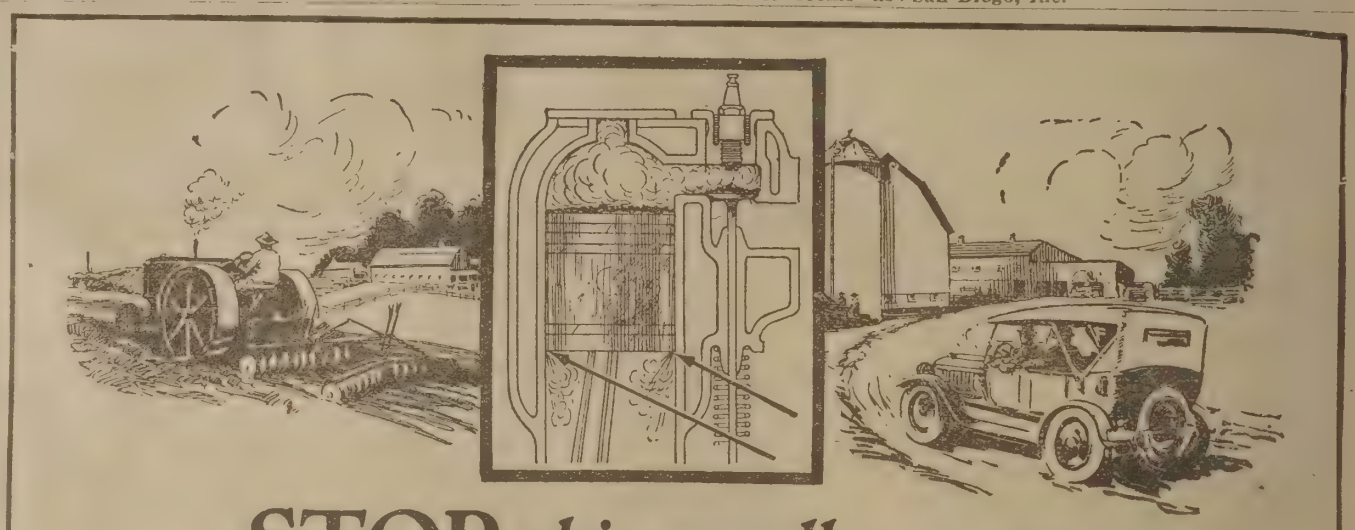
"I wish to thank you for sending me a copy of The Washington Farmer containing an article by Mr. Scollard. It pleases me very much to learn that Mr. Scollard is developing a successful cooperative marketing company. I fully appreciate the tremendous task and difficulties under which he took up this work. The failure of the Oregon Dairyman's league caused me to wonder if the United Dairy Association of Washington would make a success in its cooperative effort. With the success it has had the last year or more it would indicate that there is little doubt but that it's cooperative marketing company will continue to prove a very useful institution for the dairy farmers of western Washington. I appreciate very much your calling my attention to Mr. Scollard's article."

C. E. Arney, western immigration and industrial agent of the Northern Pacific railway, becoming interested in Mr. Scollard's article, sent a copy to H. W. Byerly, the general immigration agent of the railroad at St. Paul, and has received the following reply from Mr. Byerly:

"I have yours of the 6th, enclosing copy of The Washington Farmer of March 2 and calling to my attention the article, 'Successful Marketing of Dairy Products,' by J. A. Scollard. I am very glad you called my attention to this article, which is both very interesting and instructive and shows in a comprehensive way the results Mr. Scollard has so successfully accomplished. This shows wonderful improvement over the conditions as I found them a year ago, in the particular districts in which the association is operating."

With regard to the same article, John Thompson, editor of the Iowa Homestead, writes:

"I wish to thank you most cordially for calling my attention to the Scollard article entitled, 'Successful Cooperative Marketing of Dairy Products,' which appeared in The Washington Farmer of March 2. I have read this article and it seems as though the United Dairy Association of Washington is one of the best organized cooperative institutions that I know of. If it is as successful in the future as it was in 1921 it will certainly be worth while copying after by a great many farmers' organizations."



D. J. Carter of the Dairyman's League News of Utica, N. Y., writes:

"We very much appreciate your sending us a marked copy of your paper of March 2, containing the unusual story of the cooperative movement. Although we are separated by a continent, we shall be very glad to cooperate with you in any way possible in matters concerning this great movement."

T. A. Leadley, managing editor of the Nebraska Farmer, is much interested: "I am in receipt of a marked copy of the recent issue of The Washington Farmer containing the article of the United Dairy association. I am having this summarized for publication in the Nebraska Farmer, as I think it would be of interest to our readers who are taking a keener interest in dairying."

Sell Eggs Cooperatively

Announcement is made of the formation of a central egg marketing organization, with headquarters in San Francisco, to market all the "organized" eggs of the Pacific coast. The new organization will be called the Pacific Egg Producers, and is intended to market eggs for the Washington Cooperative Egg and Poultry association of Seattle, the Pacific Cooperative Poultry Producers of Portland, the Poultry Producers of Central California, Inc.; the Poultry Producers of Southern California, Inc., and the Poultry Producers of San Diego, Inc.

STOP *this needless waste*

Waste of power, fuel and oil—frequent and costly repairs—are largely avoidable, *if you use the right oil for your tractor,* truck and passenger car.

Perhaps you have never realized this, but it's a fact, nevertheless.

The right oil means an oil of proper body and stamina to maintain compression-tight, leak-proof cylinders and protect the bearings against friction.

Also an oil that will not clog your cylinders with carbon, dirty the spark plugs and cause leaky valves.

SUNOCO Motor Oil—the highest quality and most scientifically accurate engine lubricant made—insures a proper piston-ring seal for any design of tractor, truck or automobile engine.

SUNOCO eliminates your carbon troubles because it leaves no gummy residue to form hard carbon deposits. *And it maintains its heavy body under all operating conditions.*

SUNOCO is unexcelled for all kinds of power machinery. Buy it in 30 or 50 gallon, faucet-equipped steel drums and use it exclusively on your farm.

You will be astonished at the increased power and mileage you get from SUNOCO. Also at the money you save on repairs.

Any SUNOCO dealer will tell you the right types to use. He follows the "SUNOCO Lubrication Guide." Insist on SUNOCO and watch results.

Our new booklet, "Lubrication or Just Oil," will give you valuable information. Ask your dealer for it or write us.

The Legume and How to Grow It

W. I. NIGHTINGALE,
Bacteriologist, W. S. C.

The legumes include those plants whose fruits are borne in a pod. They include such common cultivated crops as the clover, alfalfa, sweet clover, vetches, beans, peas, soy beans, cow peas, sweet peas, etc., and a great many wild weeds, bushes and trees, such as the beggarweed, wild peas and vetches and the locust tree. Many wild legumes are found scattered throughout the state of Washington in isolated regions, and most cultivated varieties will make an abundant, healthy growth wherever they are introduced properly.

The cultivated legumes are prized by all animal husbandmen for two special reasons. They are an excellent forage for all classes of live stock, and, secondly, these plants have the faculty of building up the fertility of the soil on which they are grown when they are inoculated. The most important element in the legume contributing to its value is the nitrogen, which goes to make up the protein constituent of the plant. Next in importance is its lime content. Much larger amounts of these two elements are assimilated in the legumes than in the nonlegumes. This difference makes the increased value of the legumes for stock feeding. All growing animals, and especially those which are pregnant or giving milk, require large amounts of these two elements.

Comparative Values.

The following table shows the fertility elements and the feeding value of legumes as compared to nonlegumes:

Forage	Fertilizing constituent in one ton. Pounds of nitrogen.	Digestible nutrients in one ton. Pounds of crude protein.
Legumes		
Alfalfa hay	47.6	212
Red clover hay	41.0	152
White sweet clover hay	46.4	218
Common vetch hay	55.4	232
Hairy vetch hay	63.6	314
Field pea hay	48.4	244
Soy bean hay	51.2	234
Nonlegumes		
Timothy hay	19.8	60
Oat hay	24.6	90
Wheat hay	19.8	80
Kentucky bluegrass hay	26.6	94
Corn fodder	21.4	60

This table shows the legumes to contain about twice as much nitrogen and about four times as much crude protein as the nonlegumes.

Some of the legumes yield two to four or more harvests a year, as compared to only one from the nonlegume crops. Multiplying the amount of nitrogen gained in one crop in growing a legume instead of a nonlegume by the number of harvests secured will show the great value of the legume as a provider of this expensive element.

Demands From the Soil.

It is to be expected that plants storing up so much nitrogen and calcium in their tissues will draw heavily upon the soil where they grow. This is true of the legumes. Most soils must be supplied with calcium in some form of lime before the legumes will grow well. Acid soils in general are low in lime supply. Both the acidity of the soil and the lack of lime are factors which will cause failure of the crop to thrive. Two tons of lime carbonate per acre for a mild acid soil, put on several months before a legume crop is to be planted, is a good general recommendation. A healthy condition for maximum production can then be maintained by spreading lime over the field at this same rate about once in four years thereafter. It may be applied in the spring or after the first or second crop has been removed.

The soil may or may not be well supplied with nitrogen. The continuous cropping method followed in most systems of farming is bound to deplete it unless the supply is replenished from time to time. It is usually depleted much faster than the lime.

Nitrogen From the Air.

Tons of nitrogen are in the air above every acre of land. When the legume plants are grown with the proper bacteria nitrogen is taken from the air and used in the growing plant. The "nitrogen-gathering" bacteria, as they are called, infect the roots of the plant and modules are formed. When these bacteria are so attached to the plant they can take nitrogen from the air and supply it to the plant, where it is built up into protein substance. If these bacteria are not present the legume will draw on the soil for its nitrogen supply, the same as a nonlegume. The soil, however, will be depleted much more rapidly, since the legume requires more nitrogen, and the yield will be poor.

Inoculation Increases Yield.

Most soils are not well enough supplied with nitrogen to permit a legume crop to make the highest yield. The growth will be retarded under those conditions as it is when there is a deficiency in lime. This is where the bacteria play their part. A crop which is well inoculated, although grown on nitrogen-poor soil, will yield 25 per cent, 50 per cent and sometimes even 200 per cent higher than the same crop if uninoculated. Many cases have been reported where such results have been obtained. Besides the increase in yield there is also an increase in the protein content of the inoculated plants. This increases the feeding value of the crop for live stock and increases the fertilizing value of the crop if it is turned under for green manuring. Growing inoculated legumes on a poor soil will build up the nitrogen in the soil to some extent, even though a crop is not turned under. Whenever a stubble or green crop is turned under much larger amounts of nitrogen are added to the soil. From 50 to 200 pounds per acre is commonly gained.

Inoculation Culture.

Acid soils, soils of low fertility and dry soils in the semi-arid regions in general need inoculation when legumes are planted. The expense of inoculating is very small. It will pay every farmer, who has not already done so, to try it out and see if the legumes will not be improved on his soil. The process is simple. The bacteria is simply spread on the seed and the seed sown in the usual way.

The bacteriology laboratory at the State College of Washington can furnish inoculation cultures for all the common legumes. The nitrogen-gathering bacteria are grown and prepared in one-acre and five-acre size packages. A one-acre size package contains enough bacteria to inoculate the seed for one acre. Different legumes require different strains of bacteria to produce modules. Therefore, in buying inoculation culture the name of the crop for which it is to be used must always be specified.

To secure inoculation cultures from the state college write to the department of farm crops, State College of Washington, Pullman, Wash. State the number of acres and the name of the legume to be planted. The price is 25 cents per acre to farmers in Washington and 40 cents per acre to those outside the state. The cultures are sent by parcel post prepaid. Any amount can be supplied. Orders should be sent to the college at least 10 days or two weeks in advance of planting time. Pay for the cultures in advance by check or money order, made out to the State College of Washington. Full directions for use are supplied with every culture.

Apple Trees

Transplanting Eight-Year-Olds

O. T. Clawsen of Wenatchee is trying out an experiment with 8-year-old apple trees, which are being moved to other parts in the same orchard. In place of thinning a number of trees that were originally set out for fillers, Mr. Clawsen is digging out the entire tree, which he will move by means of a small derrick and tackle mounted on runners.

"I figure that I can save from four to six years by resetting the trees, provided the experiment will work," said Mr. Clawsen. "I am doing the digging during the dormant season and in cold weather, so as to get the benefit of snow which covers the ground and makes the moving easier. I will need some help with the work when it comes to the moving process, but as far as the digging goes I can get that done alone."

The trees are being set out where the original trees have died or where new rows are desired. Even some of the ornamental trees on the farm are being moved in the same way.

NEEDS WHOLESOME FEED.

A hog is not a four-legged septic tank.

Cletrac Is At Home Among The Trees

Cletrac
TANK-TYPE TRACTOR

CLETRAC is low-set and smooth-bodied. It slips in and out among the trees with short quick turns — comes about at the end of the row in less space than a team requires. Standing only 13 hands high—with no projecting lugs to catch low-hanging branches or scrape and bruise the bark—Cletrac is the ideal "orchard tractor."

With a Cletrac to turn under your cover crop, you can work right up close to the trees. This tractor leaves no patches of unplowed ground that so often make orchard plowing a half-power, half-horse job.

After plowing, Cletrac follows through with discing, fertilizing and lime-crushing. Its broad tank-type treads carry it lightly over soft ground without slipping and packing—it gets through with your heavy spraying no matter how wet the soil.

Today Cletrac is the admitted leader in orchard work. More fruit growers every year are using it exclusively. Remember—there's no obligation connected with learning *all* about Cletrac's *proved* ability. We'll demonstrate at your convenience.

LIVESTOCK AND DAIRY

Cleanliness First

William Campbell of Richmond Highlands, King county, Wash., is operating a small certified dairy on his 10 acres of stumpland pasture. Although he keeps only 10 cows at present, he hopes to be able to add a few more good milkers to the herd as soon as the spring pasture comes on.

The dairy barn and milk houses are not elaborate structures but upon stepping inside the visitor finds the entire interior of any of these buildings is as clean as that of any model farm home. All floors are of concrete and the walls have been painted so that any dirt that may accumulate can be easily noticed and removed.

The two Campbell boys do the milking and attend to all the heavy work about the barns since the father prefers to look after other details. The cows' udders are washed shortly before milking and they are allowed to dry from their own heat. Each milker has a clean suit of milking clothes daily, but they are not required, by the city regulation, to be entirely white, and blue and white striped suits answering the purpose very well and are easily washed.

One of the main points in securing the low bacteria count is the fact that all utensils used in the milking operation must be run through the sterilizer before they can be used for the next milking. This, of course, calls for steam twice a day and requires additional work in keeping up the fire, which is not always necessary in other dairies. The bottle cases, milk pails, cooler cans, strainer cloths and wash rags are all placed in the large sheet iron cabinet, which is then filled with steam. Such a practice is needed in order to keep the count below 10,000, which is the highest number of bacteria allowed in certified milk.

The city regulations call for a 3.5 butterfat test, but with such a small herd, Mr. Campbell has not found it practical to standardize the milk before bottling. Since there are a few exceptionally good milkers in the herd, the test usually runs between 4.0 and 4.5, which is slightly high for the city milk trade.

There is not enough cultivated land on the farm to allow for raising the feed for the herd, and all hay and grain is purchased, and the land used for pasture both in summer and winter.

"There is a lot of hard work to the certified milk business," said Mrs. Campbell, who also helps with the work about the bottling room. "There are so many ways that the bottles can get dirty that I have made it a point to look over every bottle myself before they are put in the sterilizer. At one time we had a number of complaints which indicated that there was something wrong with the bottling. We tried our best to find the trouble but could not do so for some time. Soon after this, however, we found that one of the rubber washers in the bottle filler was crumbling and made small deposits in the bottom. We bought a set of new rubbers and there was no more trouble of this kind.

"It is a lot more work to sell certified milk, but the extra price makes up for it. It is not only the labor, however, but we use up a lot of fuel for steaming the cans and bottles. If any one contemplates going into the certified milk business they should be sure of their market in the first place because the demand is none too great even in as large a city as Seattle."

ALFALFA PASTURE FOR HOGS.

Alfalfa excels all other forage crops for grazing in the development of swine breeding stock, according to C. C. Culbertson, animal husbandry section of the Iowa experiment station, Iowa State college. That statement is based on repeated tests and ranks above blue grass and rape, according to results shown in the experiments mentioned, Mr. Culbertson said. "One had only go look at the breeding gilts on the various forages last summer to see the difference," Mr. Culbertson said. "The splendid nutritional values of alfalfa were shown plainly. Gilts on alfalfa pasture averaged 200 pounds when 7 months old."

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

INFECTIOUS DISEASE—ARTICLE IV.

Influenza.

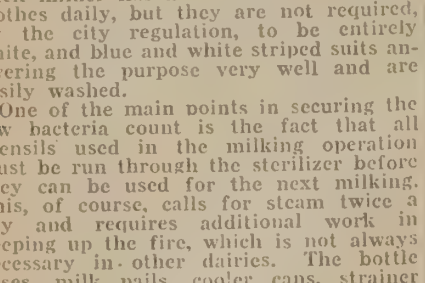
Influenza of horses, more commonly known as "pink eye" or "mountain fever" and by several other names common in different localities, is known all over the world where horses are raised. It raises its head to take its toll in all the marketing places, on the railroads, in sale stables, on board ship and in private stables, respecting no locality where horses are bred and kept. But its greatest loss is felt when animals are to be transported or when subject to the weakening effects of overwork or change of living habits. Young animals taken from the country to the city sale stable are frequent sufferers, especially when they are housed in dark, damp quarters with animals from many sources or when these quarters are overcrowded.

In many respects this disease resembles human influenza in its method of spread, its kind of attack and its after effects. We do not know the organism that is responsible for its losses, but every evidence points to it as an infectious disease. We do know that anything that tends to weaken an animal's power of resistance has a tendency to cause it to become a sufferer, any exposure to cold or damp, bad air, or crowding, overheating in cars and all such influences are predisposing ones to influenza.

Spreads Rapidly.

It spreads very rapidly through a group of horses and especially to the young or newly acquired ones in the sale barn. It may take down a great number when the animals are working in groups as in the harvest fields, especially where the housing facilities are not the best at night and the animals become chilled after a hard day's work in the dust and heat. All such debilitating influences are active factotrs in connection with influenza.

The disease uncomplicated runs quite a regular course and the percentage of loss from it is not particularly great, but the great danger is from the complications, which are many and dangerous. The chief symptoms are rapid rise of temperature, very great weakness that comes on suddenly, loss of appetite, rapid pulse and rapid breathing, chills in the early stages. The animals usually stand with their heads down, noticing nothing that goes on about them, the eyes may be swollen and reddened or not visibly affected. The above has given this disease the name of "pink eye." The eyes may water even if they do not swell and get red.



Between careful nursing and administration of drugs for the treatment of this disease there is only one choice to make, and that is the careful nursing, because without it all other treatment is likely to be disappointing. Affected animals should be placed by themselves in a roomy stall where there is plenty of fresh air and light, free from drafts and warm. They should be blanketed warmly and the legs wrapped in woolen bandages as high as the knees and hocks, if they are chilling it is well to place packs of heated salt or other suitable material under the blankets to help warm the animal. The above treatment will go a long way toward preventing the many complications that so frequently follow influenza. It is sometimes very difficult to get a man to understand the necessity for careful nursing, but it is nevertheless very important.

Uncomplicated, this disease is likely to run its course in ten days or two weeks and the animals feel quite well again, and soon after be able to take up their work, so that it pays well to care for all animals so affected.

Stimulants Are Helpful.

Treatment is not specific and most of the home remedies are not worth the time and expense necessary to give them. If they are to be given the stimulants are the best, and since the exit of the popular alcoholic ones, coffee probably is next best, given very warm, as it has the right tonic effect and stimulating action that is really quite beneficial.

Most of the attention should be directed toward preventing exposure, and if this can be accomplished and the disease caused to run a straight and narrow course

Anker-Holth Cream Separator

The separator that pleases the user. WHY? Because it has superior points that appeal to their judgment, and when tried out fulfills every claim. It should be seen and tried to get all the good points.

We sell the noted Perfection milker and washing machines of different styles.

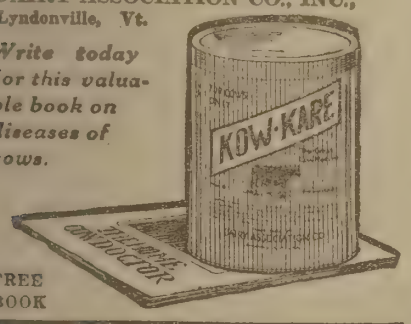
VIGOROUS COWS; HEALTHY CALVES

Calkins No Longer Fears the Calving Period

Every cow-owner knows the strain of calving on a cow's system. Kow-Kare is so widely used by dairymen before and after calf-birth to strengthen the genital organs and avoid disorders, that we receive yearly thousands of letters from grateful users. G. H. Calkins, Ione, Oregon, writes:

"I have a fine Jersey cow. When two years old she dropped twins; they came dead. She didn't clean and four days after I tried to take the afterbirth but could not. I got an experienced man and he tried and failed, and then I began giving her Kow-Kare and in about fourteen days it came away all right and she has not seen a sick day since."



Kow-Kare is equally sure as a remedy for Barrenness, Abortion, Scouring, Bunches, Milk Fever, Loss of Appetite, etc. All of these ailments result from sluggish genital or digestive organs. It is these organs that Kow-Kare is quick to strengthen and build up.

At a cost of only a penny a day, Kow-Kare is used in many of the best dairies to offset the severe strain of winter confinement and rough or concentrated feeds. This aid to digestion and assimilation keeps milk production at top notch and avoids breakdowns.

Kow-Kare will help you to bigger dairy profits; try it. General stores, feed dealers and druggists sell it at the new reduced prices—65c and $1.25

VETERINARY

By DR. S. B. NELSON.

Black Leg.—What are the symptoms of black leg? W. A. W.
Almira, Wash.

The symptoms of black leg are: Lameness in one or more legs, a swelling on some part of the body and a crackling sensation on the skin when the hand is rubbed over it.

Cut Down Feed.—Some of my sheep get a swelling under their chin about one month before lambing. I opened one and there was a thick, yellow liquid in it. They die a few days before lambing. I am feeding alfalfa hay and bran. N. A. M.
Sumner, Wash.

Cut down your alfalfa hay. Feed your sheep a little oats instead of bran and give them exercise. That may help them.

Ring Bone.—I have a horse that has ring bone; has been lame for about a year. The lameness passes off after he travels a way. The blemish is on the front foot. R. D.
Bearmouth, Mont.

There is probably only one treatment that would give results in eliminating the ring bone, and that is to have your animal fired and blistered and given several months' rest. You will need the services of a competent veterinarian for this.

Milk Has Odor.—I had a cow freshen the middle of November and she did not pass the afterbirth. The veterinarian took it from her and said she was clean, but ever since the milk and butter look all right, but the buttermilk has a rank smell and looks muddy. J. E. H.
Junction City, Ore.

No, I do not know whether or not the cow is all right, but the chances are that the temporary retention of the afterbirth has nothing to do with the condition of the buttermilk. How long do you let your cream stand before you churn it? The sooner you churn the cream the less likelihood of having this trouble.

Growth on Eyelid.—I have a dog that has a growth about the size of a pea on the inside of the upper eyelid just back of the eyelashes that causes this eye to water. The growth is the color of the lid, dark. The eye is not inflamed. Can this be removed? J. A. Y.
Troutdale, Ore.

The eye should be anesthetized, the eyelid turned back and the tumor removed. I am wondering if the tumor is in the inside angle of the eye. It may be that the tumor is a part of the nictitating membrane and that it could be snipped off, later treating with an astringent composed of one grain of zinc sulphate to an ounce of water.

Udder Trouble.—I have a cow just coming fresh that is a heavy milker and I have had to milk her before she calves. One of her teats is swollen and seems to be feverish, but gives a good flow of milk. The udder is not hard. Kindly inform me as to treatment. I am feeding grain, roots and alfalfa. G. W.
Inchelium, Wash.

Wash the affected part of the udder in hot salt water two or three times daily and rub dry with some massage. Decrease the feed that you are giving one-half to two-thirds for a little while, so as to stop this milk forming food that you are giving. Give her the driest feed that you have and administer a handful of epsom salts once daily so that her digestion may not be disturbed.

Wire Cut.—I have a horse that was badly wire cut about four weeks ago. The cut is about 10 inches above the hock on the inside of the hind leg. It is healing nicely, but will leave a large scar or knot. Can this be removed? I also have a horse 13 years old that has had a continual looseness of the bowels for eight months. Had his teeth dressed down and have been feeding stock tonic, but it does not help. He does not digest his food and is getting thin. E. J. T.
Ferdinand, Idaho.

If the wire cut is 10 inches above the hock on the inside of the hind leg, where the thigh is rather meaty, the chances are the lump will be absorbed, so that in a few months' time you can hardly see where the lump was. For the second horse I would suggest that you give him a teaspoonful of listerine on his feed three times daily. I would also suggest that you cut down the feed from one-third to one-half and later gradually increase it.

You Need a Farm in Canada

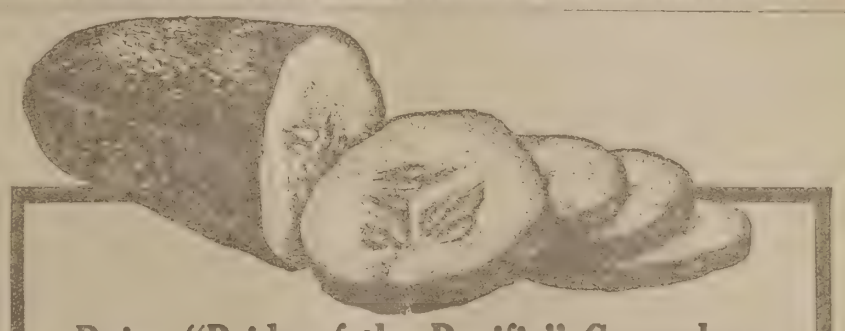
If you are to secure that independence, success and prosperity which has been the reward of thousands of American farmers who have preceded you.

Thousands of American farmers have made prosperous homes in Canada. There will be more this year. Can you afford not to follow them?

¶ These farmers knew of the rich tracts of Canadian Pacific agricultural land for sale in Western Canada at low prices—open prairie, partially wooded or park lands—all virgin, fertile and productive. They knew they could not obtain such lands elsewhere at such prices—at an average of $18 per acre.

¶ They knew that Western Canada has carried away, year by year, first international honors for wheat, oats, barley and livestock.

¶ They knew of the success that had been won by farmers from their own state who had preceded them. They knew that Canadian farm values are steadily increasing and that each year they delayed they would have to pay more to purchase desirable farms.



¶ They wanted larger holdings for their growing families. They knew they could secure sufficient land upon terms unobtainable elsewhere —20 YEARS TO PAY.

¶ As a result, 16,000 American farmers took advantage of their knowledge and moved to Western Canada last year.

¶ In Canada the government and the railroads help the farmer in every possible way. It is to their interest to do so. Taxes are moderate; laws are just; transportation facilities and markets are excellent. Language, social customs, religion, money and other conditions are the same as in the United States.

Investigate these facts for yourself and let us fill your need. Write today for information to

RELIABLE

Standard
BLUE FLAME
Wickless
Oil Heated Colony Hover *J.W.Myers, Pres.*

AN INVENTION of our President, thoroughly covered by letters patent. The most practical heating and brooding device known to the poultry fraternity. Our 1922 model Wickless and Valveless Oil Heated Colony Hover embraces all the latest and best known improvements in hover construction. From the very beginning it has been the best. It is still far ahead in the front rank. We make sure that every one is right before they leave the factory. Every burner is tested and adjusted to the maximum flame. It will not overflow. It is impossible to clog and slow down the oil flow—it burns until you turn it out.

It Is Dependable—"Reliable Because Right"

Burns ordinary kerosene or coal oil with a clear, blue flame; absolutely no fumes; no soot; no odor; no wicks to trim; no smoke. It gives a pure, clean heat necessary for the comfort and health of chicks beneath the canopy, regardless of outside weather conditions. It is easily regulated. Automatically controlled. Insures the raising of chicks with least work and care at the lowest cost.

Hovers are built of galvanized steel. Shipped completely assembled, ready to bolt the legs to the canopy. Place the heater where wanted, fill with oil, adjust burner to the heat required, and it is ready to start and will continue to go, with little cost, in fact, a great saving in fuel, as long as you want it.

Our money-back guarantee completely covers your purchase, either through our dealers, or direct from us.

Write for literature, poultry guide and sales book, thoroughly descriptive of our Reliable Line.

All Reliable Incubators, Brooders, Hovers, Poultry Appliances and Equipment made at our factory are guaranteed to give absolute satisfaction. We are prize winners throughout the world.

POULTRY AND RABBITS

Turkey Diseases

By W. T. JOHNSON, Veterinarian, Western Washington Experiment Station.

Turkey Hen Has Cold.

What is the trouble with my turkey hen? She has swellings under the eyes on the bill. One nostril seems to be dried up. The swellings are soft. She eats and seems all right except a wheezing noise when she breathes. Has been this way for nearly two weeks. Is there anything that will help her? MRS. J. A. F.

Mount Vernon, Wash.

Your turkey is very likely affected with a cold in the nasal passages, together with bronchitis.

The swellings of the head have undoubtedly been brought about by collections of nasal secretions in the suborbital sinuses of the head. This condition is best treated by massaging the swollen parts as soon as they are noted to be developing, thus forcing the secretions out the nostrils and cleft in the roof of the mouth.

The "wheezing" sound, when the turkey breathes, is very likely brought about because of bronchitis. This condition is much more difficult to relieve. I would suggest in such cases that you place a drop of spirits of camphor in the mouth daily, when the symptoms are first noted.

It is barely possible that the "wheezing" sound is a result of a collection of cheesy material in the entrance to the windpipe. It is, therefore, advisable for you to examine the windpipe for the presence of this material. Should this be found, it should be removed and the affected area swabbed with a piece of cotton, saturated with tincture of iodine.

Treatment for Head Swellings.

Some of my young turkeys have roup, I think. A soft swelling appears on one side of the head and there is a discharge from the nose. They eat well and there seems to be nothing wrong with them otherwise. Would it be advisable to lance the swelling? A SUBSCRIBER.

Your turkeys undoubtedly first developed a cold and which is now extending to the suborbital sinuses of the head. These sinuses, which are located just in front, and below the eyes, have a direct connection with the nasal passageways, so that in severe cases of colds the nasal secretions fill up these cavities, which results in a bulging, or swelling of the face.

The best time to relieve this condition is when the swelling is first noted, as at this time the contents of the cavities are more or less fluid-like. Later on this material turns to a rather firm, cheesy-like substance, at which time, it is more difficult to remove. When in the fluid state the material can be quite readily removed by massaging the swollen parts of the head and forcing the secretions out the cleft in the roof of the mouth and the nostrils. In severe cases massaging should be applied daily at first. Where the swellings have been present for some time, and the contents have become firm, I would suggest making an incision over the swelling, cutting in the direction from the eye to the end of the beak, then remove as much of the contents of the cavity as possible and plug the cavity with a small pledget of cotton, which has been saturated with tincture of iodine. This is to keep the skin incision from healing before infection is destroyed in the bottom of the cavity. This treatment should be carried out daily at first and the cavities scraped, to remove more of the cheesy material, until the infection is all destroyed in the bottom of the cavity, then the cotton pack should be left out and the cavity permitted to heal naturally.

Chickens Sick? Hens Not Laying

Questions Answered

By W. T. JOHNSON, Veterinarian, Western Washington Experiment Station.

I would like to know the cause of diarrhea in baby chickens, in grown chickens and what is best cure or remedy for the disease in each case. A. K.

Chinook, Wash.

The causes of diarrhea in chicks and grown fowls are very numerous. Anything which upsets the digestive organs tends to produce this condition in either chicks or grown fowls.

The most common causes of diarrhea in chicks are improper feeding and brooding, or other factors which produce a chick which is naturally weak at the time of hatching. We also have a contagious disease, which results in diarrhea of chicks, which is known as "bacillary white diarrhea," but this disease is not at all common in western Washington flocks.

The cause for diarrhea in the case of grown fowls is most often excessive feeding of concentrated foods, which result in an irritation of the intestinal tract. The remedy here is to lessen the amount of this type of food supplied the fowls.

My chickens' eyes swell up and also around the bill. Could you please tell us what causes it and give us a remedy? P. B.

Oak Harbor, Wash.

As a general rule, when the eyes of chickens swell and swelling is also noted around the bill, as you describe, they have previously been or are at the time, affected with a cold. Severe cases of colds generally result in an excessive amount of secretion, together with a stoppage of the nasal passages, so that the eye cavity and the suborbital sinus of the face become filled with the secretions, thus showing as distinct swellings externally. I would suggest that you look over the housing conditions thoroughly, in an effort to eliminate any such conditions as dampness, overcrowding on the roosts and improper ventilation—either too much or not enough,—as these are the common causes of colds.

I would suggest that you remove the cause of the condition and permit the fowls affected with simple colds, to overcome the disease themselves. Fowls affected with simple colds, if given the right kind of quarters, will overcome the condition themselves, in a reasonable length of time and continue to give normal, or average egg production during this period, while, if removed for treatment, very often the egg production decreases. It would be well for you to watch them closely to detect the development of swellings of the face and eyes. Whenever such cases develop, it would be advisable to take them out of the flocks, and treat them by massaging the affected parts and removing the secretion.

Recently I got a sack of meat scraps, commercial product, which I fed to my chickens. Now I have about 15 chickens, mostly laying hens, that are sick. They began by standing in a stupid manner, then hanging their heads, and their necks seemed very limber. They had a slight bowel trouble and soon became helpless and lay flat on the ground until they died. I fed only small quantities of the meat scrap. Could the hens have been poisoned by the meat scraps? MRS. L. J.

Wilbur, Wash.

The symptoms which you describe are rather characteristic of so-called "limber neck," or botulinus poisoning. Botulinus poisoning is generally brought about by the feeding of spoiled foods, in which the germ bacillus botulinus has produced a poison.

It may be that this poison was supplied the fowls in the meat scrap, but it also may have been supplied in some other food. Botulinus poisoning has been produced by the feeding of spoiled canned foods, such as beans, peas, salmon and various other canned foods.

The treatment for this disease is of no avail, unless applied shortly after spoiled food has been consumed. When observing the disease during the first stages, I would suggest that you wash out the crop or cut the crop open, and remove the poisonous material.

I have a S. C. White Leghorn that has a gurgle in its throat at times, especially when frightened. No water comes from the eyes or nose. Eats well and is spry. Has been this way for three weeks. Can you tell me what is the matter?

Yakima, Wash. F. L. K.

Your fowl which emits gurgle from the throat is very likely affected with chronic bronchitis. This very often is brought about by the fowl roosting in a draft.

Where this condition is noted when first developing, and the fowl is in a good state of flesh, I would suggest that you place a drop of spirits of camphor in the mouth, once daily, until marked improvement is shown. If marked improvement is not shown in a week's time, I would advise that you dispose of such a fowl, as it is generally not advisable to keep a fowl which has developed a chronic condition of this kind, as very often the egg production is seriously affected and they finally die of the disease after a long period of illness.

The combs of my Rhode Island White roosters turn dark blue and then they die after a few days. I have had them locked up for some time on account of snow and cold weather. Can you tell me why they get that way and what to do for them?

Hay, Wash. J. A.

The development of a blue comb is not indicative of any one particular disease. A wide variety of diseases may result in the development of such a comb.

I would suggest that you cut open any fowls dying with this condition, in an effort to locate the cause of the trouble.

I have a White Leghorn hen that looks and seems healthy, but is weak in the knees and not able to stand. I am feeding sprouted oats, wheat and a little corn with wheat at night. Would you kindly tell me the cause of this and how to stop it and is the disease contagious?

Spokane, Wash. H. F. E.

We very often encounter a disease at this time of the year, with which fowls become paralyzed in the limbs. Very often when this condition is found to develop in a fowl that is laying at the time, the disease is usually overcome in a few hours, to a few days, without any medication. We find that a good many flocks which are fed and managed for high production, show this trouble during his time of the year.

In case this fowl was not laying at the time of developing the trouble, and continues to remain this way for a number of days, I would suggest that you kill her, as such cases rarely recover.

I have a hen and a rooster that have lost their feathers around the neck and would like to know what to do. G. B.

Chinook, Wash.

The cause of fowls losing their feathers around the neck and head is not definitely known. By some, this condition is attributed to the irritation produced by ammonia coming from the litter and by others, to a mite called a "dupluming mite." Personally, I do not believe that the ammonia from the litter is responsible for this condition. Also, I do not believe that the dupluming mite is responsible for the majority of cases in our western Washington flocks, as upon examination a number of such fowls coming from western Washington flocks, I have not yet observed the dupluming mite.

In case your fowls are producing well and apparently are in good health otherwise, than the loss of the feathers, I would suggest that you let them take their natural course. Ordinarily, these fowls over-

The Belgian Hare

Among the true rabbits, the Belgian hare most closely approaches in build the speed lines of the English hare. Its standard weight is but eight pounds or less. The Belgian hare is more nervous, and therefore less a meat-accumulating breed, than the larger Flemish Giant and similar rabbits, and Belgian hares' pelts do not command so good a price. For grace, cleverness and splendid resistence to cold, however, the Belgian hare is paramount. The young are not as resistant to disease as those of varieties not so long inbred.

THE BREEDING STOCK.

The best birds for breeding are picked from among the sturdy yearling hens in the fall, namely those that are laying latest, or still laying after October 1. They will have bleached beak and shanks, bright red combs, only normal shrinkage of flesh for this period and every sign of vigor.

THE EARLY CHICK.

If you receive young chicks before your brooder is ready keep them in a warm room and feed them at intervals of three hours.

GENERAL ADVERTISING.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea.

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 547, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

CAUSE OF WHITE DIARRHEA

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

NEVER LOST A SINGLE CHICK

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

NEVER LOST ONE AFTER FIRST DOSE

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

YOU RUN NO RISK

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

WALKER REMEDY CO., Dept. 547,
Waterloo, Iowa.

Send me the ( ) 50c regular size (or ( ) $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to instantly refund my money if not satisfied in every way. I am enclosing 50c (or $1). (P. O. money order, check or currency acceptable.)

ORCHARD AND GARDEN

Plants in Line

Heavy Wire Acts as a Guide

Fruit growers in attendance at the western Washington horticultural convention were much interested in the informal paper given by Charles Baxter of Anacortes, in which he set forth many practical ideas in strawberry culture, which were the result of several years in the business. One of his original ideas was his method of lining out the field.

"It is not sufficient to plow furrows and drop the plants by hand,' 'explained Mr. Baxter. In order to get the plants exactly in line I always mark out my patch with a short line across the width at each end, while a heavy wire is stretched lengthwise. Short pieces of string are tied onto the wire at the proper distance for the hills, and the plant is set with a Land dibble beside every mark.

"In some cases I mark the field crosswise with a small wheel cultivator, since it is much easier to make the holes for each plant in this way. I find that it is much better, especially with nursery plants, to have the plants in a large milk pan, which can be pushed directly ahead of the operator. A very small amount of water should be placed in the bottom of the pan. If the plants are taken out and dropped by hand in front of the one who is planting, the roots are apt to dry out. Before setting out, the plants should be trimmed of all long roots, and all leaves except a few young ones at the center. Set the soil firmly at the bottom of the roots. When a man understands the work, he should be able to plant from 2000 to 3000 plants per day.

The Cultivation Plan.

"I find it a good plan to use a light garden rake to level the ground between the rows as soon as the plants have been set out. Cultivation should begin as soon as possible after this in order to hold the moisture. When the rows have been set for cross cultivation, the cultivator will take out most of the weeds up close to the plant, and a very little hoeing will be necessary.

"Never allow new plants to grow in the row unless you are setting your new field with nursery plants, and expect to fill in with runner sets. This is a cheaper way of setting, but it takes longer for the field to come into bearing. Strawberries can be set in the fall in western Washington. September is a good month if the soil is in shape. I have been able to get as many as six crops from one patch without replanting.

"The berries should never be picked when wet. Give each picker a number, and require her to mark each row that she has picked with a small peg. In this way it is easy to keep tab on the poor pickers.

A Good Idea.

"I have found it better to employ girls during the picking season, but if it is necessary to employ both girls and boys, the boys should be put to work on a separate patch or the opposite side of the field."

Combating Insects.

Mr. Baxter explained his plan of getting rid of insect pests. When they are bad after the picking is over he uses a mower, cutting all the foliage and raking it in a long row to the center, between the rows. The first time there is a wind blowing with the rows, the leaves are burned.

When the centers of the rows become weedy, Mr. Baxter considers it a good plan to plow furrows from the rows, then run a potato digger under this ridge, which brings all weeds to the surface where they will easily dry out. The patch is then in fine shape for cultivation.

"I believe in scattering straw over the patch in the fall, but I am careful to keep it clear of the plants and to use straw free from weed seed," concluded Mr. Baxter. "When entirely covered the plants seem to smother, since the weather is not cold enough to justify heavy covering. In the spring the entire patch is raked with a hay rake, dumping the windrows between the rows of plants. I go over the entire patch and fork these rows into shape for burning. The plants will not be injured if the wind is blowing in line with the rows."

How to Produce Celery

By J. L. STAHL, Horticulturist, Western Washington Experiment Station.

I want to raise celery and would like to hear from some one who has raised celery in western Washington. .I. W. B.

Yelm, Wash.

Celery is usually grown on muck land, where the soil is rich in decayed plant growth. However, it may be grown on fertile, sandy loam soil. In the southern part of the state, Golden self-blanching, is a popular variety. The local markets in this and the northern parts of the state prefer the White Plume variety. Plants are commonly grown in hot beds or cold frames and reset to the field after danger of spring frosts is past. At this station the practice has been to seed early celery about March 1, transplant to the field about May 20, blanch with boards or dirt August 1, and harvest in early September. Several later seedings and transplantings are made three or four weeks apart, to have a continuous harvesting until after Thanksgiving.

Where blanching is done with boards, the plants are set five or six inches apart, with rows 30 inches apart. When blanching is done with dirt the rows are placed 40 inches apart.

Shallow Frames for the Bees

By GEORGE W. YORK.

Usually the beginner with bees decides to produce comb honey in the little square 4 1-4x4 1-4 inch sections or boxes commonly found for sale in grocery stores.

Sometimes it is not easy to get the bees to go up into the super holding the empty sections, which are placed immediately over the brood-chamber. At times it is almost necessary to force the bees to go up and store honey there.

In recent years I have been advising those beginners who wish to produce honey for home consumption entirely, to use the shallow-frame super rather than the section super referred to above.

For the eight-brood-frame hive the super would contain eight shallow frames the same length as the brood frames, but only about 5 1-2 inches deep. These shallow frames should have fastened in them full sheets of thin comb foundation, which would induce the bees to build the completed combs straight. It seems, too, that bees prefer to work in super combs somewhat similar to the ones used in the brood-chamber below, rather than in such small combs as in the 4 1-4x4 1-4 sections.

It is true that the queen-bee is more likely to go up and rear brood in the shallow frames than she would in the small sections, but this is easily prevented by keeping the queen below in the brood-chamber, by the use of a queen-excluding honey board, which is inserted between the brood-chamber and the shallow super. This queen-excluder permits the passage of the worker bees through it, but the queen and drones can not pass.

When these shallow frames are full of honey, they can be removed, the honey cut out of the frames, and eaten on the dining table just as if it had been stored in the little square sections. It will be just as sweet and good to eat, only it will not be in quite as tempting and convenient form as when put up by the bees in the sections.'

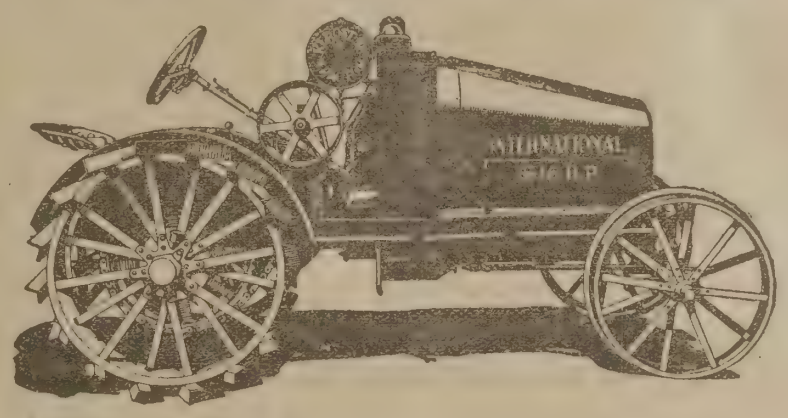
As bees seem to prefer to work in the shallow frames rather than in the sections, they usually will store more honey in shallow frames.

Another advantage of shallow frames is that they can be put into a honey extractor or separator and the honey removed from the combs. Then the empty combs can be replaced in the super and put on the hive again, when the bees will refill them.

Moles and Mice

Much of the damage that has been laid to the work of moles has really been done by field mice, according to L. K. Couch of the bureau of biological survey at Olympia. The field mice will inhabit the mole runways and eat root crops, gnaw the roots of trees and occasionally girdle the bark from the trunks of fruit trees. Field mice are also death on bulb patches.

"The moles do not make their diet on roots or such growths, but eat largely of earth worms, said Mr. Couch. Since the field mice depend on the moles for their burrows, it is first necessary to eliminate the moles in order that the mice may be successfully poisoned. Trapping has been found the best method of getting rid of moles. The regular mole traps, such as are sold by dealers, will give best results. Poisoning is very unsatisfactory.



"A campaign has been started in Whatcom county to eradicate the moles and then poison the field mice," said Mr. Couch, since they have caused much damage to the bulb crops at the government bulb farm near Bellingham. A similar campaign has been put on in Clallam county. Field mice have also done some damage to the cranberry crops in southwestern Washington.

The field mouse has been a big problem in Wenatchee this winter and the county extension workers have given some valuable assistance in the campaign, in which a large quantity of strychnine was used.

International 8-16 Cut $230

Now $670 f. o. b. Chicago

and a P&O 2-furrow Plow FREE

Harvester Company's Exceptional Offer

Effective Feb. 3 to May 1, 1922

The Harvester Company makes this special offer to apply on all new International 8-16 and Titan 10-20 tractors purchased by its dealers on 1922 account. Each farmer purchasing one of these International 8-16 tractors, for delivery on or before May 1 next, will be given by the Company ***absolutely free,*** f. o. b. Chicago, a 2-furrow P & O plow. On the same terms, each farmer who purchases a Titan tractor will be given a 3-furrow P & O plow.

The International 8-16 is not a stripped tractor pared down to make a price, but complete with all essential equipment — ***belt pulley, fenders, platform, throttle governor, adjustable drawbar, angle lugs, brakes.*** This equipment, worth more than $100 and necessary on any tractor to make it serviceable and safe, is included in the new $670 price. ***No extras to buy.***

Titan Price Now $700 f. o. b. Chicago

This new Titan price is sure to interest any man who wants a real 3-plow tractor, with belt power in proportion. Remember that 3-plow capacity cuts the labor cost on every field operation. Note that until May 1, 1922, every farmer purchasing a Titan tractor covered by the Special Offer will be given a P & O 3-furrow plow free. If the purchaser now owns a suitable plow we will substitute a tractor disk harrow.

Greatest farm power values ever offered. Neither horses nor any other tractor can equal them.

Special Offer Expires May 1st. See the McCormick-Deering Dealer Now!

Columbia Basin

Widespread Interest in Project

To the Editor of The Washington Farmer: What is your opinion in regard to the Columbia basin project becoming an established fact? Do you think that the great Panama engineer's verdict, if finally favorable, will wield enough influence to help the project along to the point of certainty?

If the project passes, about how much per acre can we homesteaders expect for partially improved land?

In the next place, I am looking for a sort of combination farm where I can have a small tract of natural growth of timber and a running stream or lake; the rest of the farm must be tillable land suitable to the rearing of hogs as a specialty. I am a naturalist by taste and I want a small tract of natural growth of vegetation and trees, so that I can cultivate the friendship of the birds. This farm can be from 80 to 160 acres, but must be where there is sufficient rainfall to insure good crops. Have you any idea in what part of the west one could find such a place? I do not care to be miles away from a settlement.

What is your opinion of the hog in the northwest? I have great faith in the hog as a money maker. As I could not pay cash for such a place I believe that I could pay for it by laying special emphasis on the hog proposition. What is your opinion?

McKenna, Wash. CARL L. KAPP.

A favorable report by General Goethals would command respectful consideration in congress and from the nation. With his favorable report and the safeguarding of the water supply, we think the realization of the project would be only a question of time, as the country is increasing rapidly in population, the supply of new lands is about exhausted, and there will be a growing need of opportunities for the sons and daughters of American farmers who will naturally want to open up new homes for themselves, just as their fathers and mothers and their grandparents did before them.

Land prices under the project are problematical. We strongly advise, though, against any speculative buying at this time.

We agree with you that there is a great future for hog raising in Washington, along the lines indicated in our recent articles on that subject. Most of the counties of this state, or of Oregon or Idaho, can meet your requirements. For fuller information write to the secretary of state at Olympia, Salem or Boise.—Editor.

Watering Cups for Cows

An interesting story of farm economy comes from Elmer E. Heg & Sons, Holstein breeders, of East Stanwood, Snohomish county, Washington.

Late last fall Dr. Heg suggested putting automatic watering cups in the main milking barn. While talking it over with one of the boys the plan was considered a rather unnecessary expense, which had better be laid aside until the firm could better afford new equipment.

"I began to figure with one of our local dealers, who told me the equipment could be installed for approximately $100," said Dr. Heg. "He offered to sell me what I needed on a monthly payment plan, with only a small initial payment. I decided to give it a trial.

"Within a short time we began to notice a big difference in the flow of milk and as soon as we could estimate a general average we noticed that we were getting an extra can of milk a day. At this rate we were able to pay for the equipment with the increased milk alone and still had the usual supply to depend on for general expenses.

"It taught me a lesson," said Dr. Heg, "and in the future when I am quite sure some kind of an improvement is going to save money in the long run I will look after it immediately and not wait until it is paying for itself."

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

HELP WANTED—Female 1

GOOD HOME, LIGHT WORK, FOR RESPECTable woman; references. Box 5, Alameda, Wash.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

Is Putting "Pep" Into Business

Trout Lake Holstein Association Is on the Job

The Trout Lake Holstein-Friesian association of Klickitat county, which was organized in January, was very much in evidence at the Davis-Butchart sale early in February. One-third of its entire membership, including both the president and vice president, attended and bid on the offerings, and they took home not only 12 head of purebreds from this sale, but a carload or two of grades, which made their shipment one of the largest of dairy cattle that has ever come into the White Salmon river valley. Their purebred purchases totaled $3090.

Up to that time there were only two purebred cows and one purebred bull, owned by William Elmer, in the valley, but the "pep" which this organization has injected into the business since the January meeting indicates that there will soon be a good many more. There were 16 at the meeting and the association now has 16 members and had a representative at the state association meeting in Seattle March 7. On February 22 the association gave a banquet, entertainment and dance at Trout Lake, with the entire valley as its guest, just to show that the Holstein breeders there are at last alive, and a big breeders' banquet is being planned for May 6.

More than a year ago the late Fred S. Stimson, then president of the state association, made a visit to the Trout Lake district and returned with glowing accounts of its adaptability to dairying and of the field it furnished for Holstein extension work. Though the elevation is high, sunflowers, alfalfa and pasture grasses flouish there. Alfalfa has to be hauled 20 miles to a railroad, consequently the dairy cow supplies the best kind of a marketing medium. And of 75 cows in the valley only a few were purebreds.

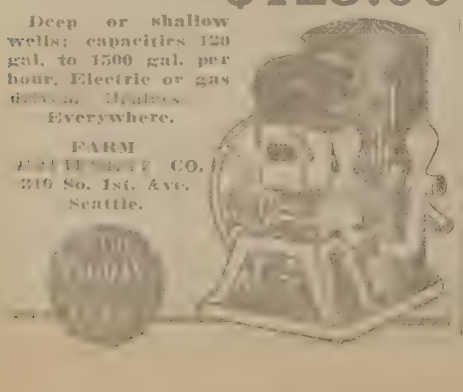
Members of the association are William Elmer, president; Sanford Peterson, vice president; F. A. Schinick, secretary-treasurer; Frank Cory, James Childs, Will Coate, Charles Coate, George Rogers, C. A. Elmer, A. Elmer, John Scoggin, R. L. Bewley, John Phister, Louis Rasmussen and R. A. Wilson.

The purebred Holstein population of the Trout Lake district, in Klickitat county, was increased 600 per cent, or from 2 to 14, by the attendance at the Davis-Butchart dispersal sale of this group of breeder-enthusiasts. They took home also a number of grades, and they promise to keep things moving, as far as Holsteins are concerned, in the White Salmon river valley. Left to right, they are: C. A. Elmer, L. Rasmussen, W. A. Elmer (president), Frank Cory and Sanford Peterson (vice president).

Turns Under All His Stubble

"Never burn your stubble," is the advice of B. B. Gillespie of Ritzville. He gives the advice not only to farmers in the grain-growing sections having plentiful rainfall, but to those who live in the drier areas of the Big Bend country.

Mr. Gillespie makes it a special point to turn under completely every bit of stubble and other vegetation that there is on his wheat land. He begins by breaking up the stubble with a harrow or disk. When stubble is left standing until plowing time a great deal of it is either left sticking up through the plowed surface or is covered to a slight depth only. To insure complete turning under, Mr. Gillespie uses a jointer on his plow to turn down the upper portion so that the stubble and other vegetation will be placed well down in the bottom of the furrow.



Mr. Gillespie is a believer in deep and early plowing. He recommends from six to eight inches for average Big Bend conditions. Where it can be practiced he favors disking in the fall, not only to break up the stubble, but to give the weed seed a chance to germinate with the first fall rain. This having been done, they will be destroyed by later cultivation or plowing. After plowing he uses a spike-toothed harrow, ordinarily, to settle the subsurface. He does not favor cultivating summer fallow when dry. The rotary rod weeder is his favorite weed-destroyer for summer fallow land. If there are weedy portions in his summer fallow when seeding time comes in the fall he goes onto it with a view to killing the weeds before seeding.

Fall seeding or cultivation should leave the land in a rough condition to prevent packing and washing, in the opinion of Mr. Gillespie. Partially for this purpose he uses the old-styled hoe drill in preference to the disk drill, because the hoe not only tends to destroy weeds, but leaves the land in this desirable rough condition.

On comparatively level land he uses press wheels behind his drill in order to give the soil in the seed rows a slight packing to retain the moisture for germinating the seed. He does not use the press wheels in spring seeding.

On his place near Ritzville Mr. Gillespie seeds Turkey red wheat in the fall at the rate of about one good bushel per acre.

Poisoning Groundhogs

A report from Leo K. Couch, assistant director of the bureau of biological survey of the United States department of agriculture, tells of the work that is being done to fight the groundhogs, which are becoming very numerous in Okanogan and Chelan counties. Much credit is due to the county agents and other extension workers where this work has been taken up. The only method of eradication which has been successful are the poisoned baits which are given below, as recommended by Mr. Couch:

Poisoned Grain.

Mix one tablespoonful of gloss starch in one-half teacup of cold water and then stir this into one-half pint of boiling water to make a thin, clear paste. Now mix one ounce of strychnine (alkaloid) with one ounce of baking soda and stir with the starch into a creamy mass, beating it until it is free of lumps and thick. Add to this one-fourth pint of heavy corn sirup, one tablespoonful of glycerin and one teaspoonful of saccharine dissolved in a little warm water. Beat the starch mass again and then pour it over 12 quarts of oats in a tub or tight box and mix thoroughly—until there are no dry kernels. Four tablespoonfuls of salt added to the boiling water before making the starch increases the effectiveness of the poison during the crop-growing season. Only good, heavy, recleaned oats should be used for this bait.

In distributing the poisoned grain, place a handful in a place, on a clean, hard surface within close proximity to the den or burrow. The marmots pay no attention to scattered grain. Care must be observed to place out of reach of stock.

Poisoned Green Alfalfa.

A very satisfactory bait can be made with the use of green alfalfa. Mix dry, one ounce of powdered strychnine (alkaloid) with one-eighth ounce of powdered saccharine and place in a pepper box, properly labeled. Dust this mixture over about 20 pounds of freshly-cut alfalfa tops which have first been moistened with Karo water made of two parts corn sirup and one part water.

Place the baits (a handful to a place) near burrows, trails and lookout points.

Poisoned Salt.

Mix one ounce of strychnine (alkaloid) with 16 ounces of table salt. Place salt on clean, hard surfaces, a teaspoonful to a bait, or in jar lids spiked to the ground. The bait is best exposed in fields where groundhogs are feeding.

Caution: All poison containers and all utensils should be labeled plainly and kept out of reach of children, irresponsible persons or live stock.

Wheat Experiments

In discussing the results of a series of experiments on a plot of wheat land at the state college experiment station at Pullman, where a study of manure values, summer fallow methods, wheat rotation and depth of plowing has been under way, E. G. Schafer, head of the farm crops department of the state college, says:

"Manure applied in the spring each year before plowing at the rate of 10 tons per acre increased the average annual yield of spring wheat 2.2 bushels per acre. Manure applied in the fall each year before plowing at the rate of 10 tons per acre increased the average yield of winter wheat 14.2 bushels per acre. The use of manure for winter wheat produced an average annual increase of 12 bushels more than the use of manure for spring wheat. There was a variation in acre yield of 1.3 bushels for winter wheat grown alternately with summer fallow when manure was applied before plowing, as a top dressing after plowing and as a top dressing after seeding.

"Early-plowed, well-tilled summer fallow produced 11.8 bushels per acre more than summer fallow which was plowed late and left untilled. The average yields during the second 10 years of the period were greater than during the first 10 years for six of the seven plots when wheat was grown in rotation.

"Continuous cropping of both spring and winter wheat materially decreased the average yield during the second 10-year period. Spring plowing for spring wheat produced an average of 2.9 bushels more per acre than fall plowing for spring wheat. Usually it is desirable, however, to plow as much land in the fall as possible in order to insure early spring seeding. The depth of spring plowing has but little influence on the yield of spring wheat."

Prevents Apple Scald

Results during 1921 in preventing apple scald in stored apples by the use of oiled-paper wrappers have confirmed all previous reports that the trouble may be controlled in this way, if the wrappers carry a sufficiently high percentage of oil. The United States department of agriculture has recommended that the wrappers should carry 15 to 20 per cent of oil if they are to be effective in preventing the development of scald. When wrappers carrying a low proportion of oil, in some cases as low as 5 per cent, have been used poorer results have been obtained.

The demand for the right type of oiled wrappers for apples has been so great that many of the orders from growers have not been filled. About 80,000 boxes of apples were packed in oiled wrappers at Wenatchee last season, and a similar number at Yakima.

Scald is a transportation and storage disease that is produced by gases given off by the apples themselves. The disease is greatly favored by warm storage and by delays in reaching storage. It is particularly serious on the York Imperial, Grimes, Arkansas (Mammoth Black Twig), Rome Beauty, Rhode Island Greening, Stayman Winesap, Wagener and Baldwin varieties. In mild cases the apple is merely tinted with brown, but in more severe cases the entire skin layer is killed. The disease looks like an apple rot, but is rather a cause of rot. The gases which cause scald can be removed by ventilation or by absorbing them with oils. Apples scald far less in boxes, crates or ventilated barrels than in commercial barrels, but scald can be entirely prevented by storing the apples in oiled, not waxed, wrappers, the investigators say. This treatment has been

Spring Bee Feeding

When Colonies Run Out of Stores

By GEORGE W. YORK.

Quite frequently in the spring some colonies in almost every beeyard will need to be fed. For various reasons some run out of stores of food while others may have plenty to carry them through until they can gather enough from the flowers.

Syrup for spring feeding is very easily made from two parts of granulated sugar thoroughly dissolved with one part of boiling water. This is then fed warm to the bees.

There are several ways of feeding this syrup to the bees. It is always best to give it to them in the evening just before dark, then they will store it in their combs during the night and thus avoid any danger of other colonies robbing the ones being fed. It would also be well to close the hive entrance down to about two inches in width by three-eighths or one-half inch in height.

To feed the sugar syrup, I prefer to put it into a feeder that can be set right on top of the brood-frames and then covered over warm with burlap, all within an empty super put on the brood-chamber. An Alexander bee feeder works well, as it will sit diagonally within a 10-frame super, and the same way in an eight-frame super by sawing off one-quarter to one-half inch at the corners of the feeder. It is made of a solid block of wood about 3x4 inches and about 20 inches long, on one side of which wide saw-kerfs have been made almost through the block, but leaving several strips sticking up so that the bees will not drown when getting the syrup out of the feeder. Four or five sticks of wood, about one inch square and five or six inches long, should be crossed on top of the feeder, and several inches apart, for the purpose of holding up the burlap packing above the feeder so that the bees can get at the feed in the feeder.

The syrup can very easily be poured in at one end of the feeder by raising the corner of the burlap. The hive cover is then replaced, when the bees will do the rest.

A shallow tin pan could be used instead of the Alexander feeder, putting cross-sticks just the same on top of the pan to hold the burlap up out of the syrup and to permit the bees to get it.

It is well to examine the bees the first day warm enough to open the hives in the spring so as to learn their exact condition in regard to food supply. They will usually need a good deal to carry them through the spring months, as they should rear considerable brood, which will require much food.

Just Folks

Young folks received their education 4000 years ago and young folks will receive their education 4000 years hence.

The five senses have been avenues of education in all ages. The inherent desires have prompted to education in all ages. Environment has molded education in all ages.

The invention of printing, the founding of universities, and the establishment of the common school system, are not the beginning and the end of education. They are the incidentals and not the fundamentals of education.

Education was as broad as humankind before the birth of Gutenberg and education will be as broad as humankind when the Rockefeller Foundation and the National Education association are no more.

This is not saying the Rockefeller Foundation and the National Education society are not types of great and widely prevalent agencies in the development of present-day education. It is simply saying that no matter what may be the artificial agencies adopted by men for education, the natural agencies ever remain supreme.

I was led to think of these things by a sentence from one of Dr. Frank Crane's recent editorials. The doctor says: "After all, the greatest thing in the world in any school is atmosphere."

Books and schools and teachers and foundations must lose themselves in that atmosphere if they would become most effective in education.

Our civilization demands and must have organized system in education, but what does it profit the boy or girl if he gain the whole world of systematized education and loses the soul of education.

The kind of a man or woman the child will make depends more upon his home than any other influence.

The community has the next largest influence upon the boy and girl.

All the schools can not take the place of the home or of the community in the development of the child.

It is only as the public school system allies itself with the home and the community that it can hope to do its best for the child.

Hence, community development, reaching into the homes of the community, should be a big part of the common school problem.

The best results of the schools are seen in pupils from the best homes and these best homes should receive a large part of the credit for success generally attributed to the schools, in the education of the boy or the girl.

The disappointing pupils are generally from the most disappointing homes and these disappointing homes are not limited to those having less money than their neighbors.

Hence, I believe that a portion of the school taxes can be spent nowhere more profitably than in the upbuilding of a healthy sentiment in the home and in the community as an integral part of school work, even at the expense of some of the special functions of education commonly regarded as strictly within the domain of the schools.

As far as the public school system is concerned that home and community development properly grows out of effort centering at the school plant. The enlarged use of the schoolhouse for public meetings and entertainment, the building of community halls on the school grounds by school taxation, the teachers' cottage, which should be a parish house in a peculiar sense, the picnic grounds with facilities and opportunities for rural sport, the agricultural experimental plats, the community library, etc., are to all intents and purposes part of the public school educational functions.

I believe that any school code which does not distinctly and positively provide for this community development is neglecting a fundamental part of the education of the boy or the girl. E. A. S.

Growing Rutabagas

By M. E. M'COLLOM, Agronomist, Western Washington Experiment Station.

Please give me information or where I can get information on growing rutabagas, and how they can be freed from worms. E. O.

Ferndale, Wash.

We know of no reliable method by which you can get rid of root maggots in rutabagas. Early spring seedlings of rutabagas are usually damaged much more extensively by roots maggot than later seedings. Seeding may be done as late as the first of August, but it is necessary in this case that you have a soil well supplied with moisture. Rutabagas are either seeded broadcast or in rows about 32 inches apart. These rows are later thinned out to a plant every 8 to 10 inches. It requires about four pounds of seed per acre.

The best varieties for western Washington are Monarch, American Purple Top Skirvings Purple Top and King of Swedes.

SURPLUS WAR SUPPLIES

Ordered Sold by the War Department

Thousands and thousands of dollars' worth of surplus army and navy supplies have just been received direct from the quartermaster's department at Camp Lewis, Washington; Camp Kearny, California; Fort Mason, California. These goods are being sold direct to the readers of this magazine at prices that almost stagger belief. Order at once from the few prices listed or send for big new price list.

Medium heavy weight cotton ribbed union suits; gray. All sizes $1.29

The GAUNT GRAY WOLF

By DILLON WALLACE

Copyright, 1914, by Fleming H. Revell Co. Published by special arrangement with the International Feature Service, Inc.

SYNOPSIS.

Shad Trowbridge, a New England lad of about 20 years, sails on a mail boat to Labrador, where he plans to spend a few weeks of summer hunting and fishing in the wilderness. Upon his arrival he meets two experienced fishermen and trappers, Dick Blake and Ed Matheson, who recommend to him a young lad of 17 known as Ungava Bob, as a guide for his hunting and fishing trip inland. Desiring to lose the least time possible in securing Ungava Bob's services and starting inland for his vacation, Shad starts across the bay in his canoe in the face of a threatening storm. In the darkness his canoe is capsized and he is plunged into the icy water. As he rises to the surface a rope is thrown to him and he hears a voice shouting to make it fast. He is soon drawn aboard a little sailboat which, unknown to him, had approached at the moment of his great need.

"I'm sure I owe my life to you," he said to the lad piloting the sailboat. "It was lucky for me you saw me."

"'Tweren't luck, sir," said the lad. "'Twere Providence. 'Twere the Lord who were takin' care of you."

To his surprise, Shad discovers that his new friend, the lad with the sailboat, is none other than Ungava Bob. Together, they make their way to Bob's home, where Shad enjoys the hospitality of the northland while they consider ways and means of making inland excursions. Shad decides to remain a month or more and make the first leg of a long winter of trapping planned by Bob, returning to the settlement in time to sail back home before college opens. To lay in additional supplies for the trip they cross the bay to the Hudson's Bay trading post, where Shad meets with other friends of Ungava Bob and his parents, including Mr. and Mrs. Black, whose daughter Bessie and Bob are great friends.

CHAPTER V.

In the Far Wilderness.

Presently Tom joined them and invited them to dinner in the crudely furnished but spotlessly clean living room of the cabin. Mrs. Black, a stout, motherly woman, had countless questions to ask of Douglas and Bob as to how th' folks t' home" fared, while she and her daughter Bessie served the meal.

Shad dined with Mr. McDonald, but directly after dinner joined Bob while they made their purchases in the shop and prepared for immediate departure to Wolf Bight. When all was ready, Bob left Shad waiting at the boat while he returned to the cabin to say goodby to Mrs. Black and Bessie.

Bessie followed him to the door, and when they were outside where none could see she drew from beneath her apron a buckskin cartridge pouch, upon which she had neatly worked in silk the word "Bob" in the center of a floral design, doubtless the result of many days' labor.

"Here, Bob," said she, "I were makin' it for you, an' when you carries it on th' trail remember we're all thinkin' of you down here, an' wishin' you luck in th' furrin' an' hopin' you're safe."

"Oh!—Bessie—'tis wonderful kind of you—I'll always be rememberin'," Bob stammered in acceptance, for a moment quite overcome with surprise and embarrassment.

"Now take care of yourself, Bob. We'll be missin' you th' winter—goodby, Bob."

"Goodby, Bessie."

Bob and Shad quickly hoisted sail, and as they drew away from shore Bob looked back to see Bessie still standing in the cabin door, waving her handkerchief to him, and he regretted that he had not shown more plainly his appreciation of her gift and her thoughtfulness.

The following Monday was the day set for the departure of the adventurers, and in accordance with a previous arrangement, late on Sunday afternoon Dick Blake, Ed Matheson and Bill Campbell, Ungava Bob's trapping companions, joined him and Shad at Wolf Bight, where they were to spend the night. Bill Campbell was a tall, awkward, bashful young man of 21, whose chief physical characteristic was a great shock of curly red hair.

Monday morning came all too soon. Breakfast was eaten by candle light, and with the first gray hints of coming dawn the boat and Shad's canoe were loaded for the start.

Shad's tent and camping equipment, less heavy and cumbersome than Bob's, together with a limited supply of provisions for daily use upon the journey to the plateau, were carried in the canoe. The bulk of the provisions and the heavier outfit for the trails, made up into easily portaged packs, were stowed in the boat. This arrangement of the outfit was made to avoid the necessity of unpacking and repacking at night camp, and with packs thus always ready for the carry, much time could be saved.

The family gathered at the shore to bid the travelers farewell. First, the boat with Dick Blake, Ed Matheson and Bill Campbell at the oars pulled off into the curtain of heavy morning mist that lay upon the waters. Then Bob kissed his mother and Emily, pressed his father's hand, took his place in the canoe with Shad, and a moment later they, too, were swallowed up by the fog.

The long journey, to be followed by a winter of hardship and adventure, was begun, and with heavy hearts the little family upon the shore turned back to their lowly cabin and weary months of misgiving and uncertainty.

Beyond the sheltered bight a good breeze was blowing and presently, as the sun arose and the mist lifted from the water, Shad and Bob, keeping close to shore, discovered the boat a half mile away with sails hoisted, bowling along at good speed.

"We'll be makin' rare time, now," said Bob. "We'll be passin' Rabbit island in an hour an' makin' the Traverspine t' boil th' kettle for dinner."

"No rapids today?" asked Shad.

"No, th' portage at Muskrat falls is th' first," answered Bob, adding uncertainly: "I'm 'feared you'll find th' work on th river wearisome, not bein' used t' un—th' portagin' an' trackin'. I finds un hard."

"That's a part of the game," said Shad. "I expect to do my share of the work, old man, and I don't think you'll find me a quitter."

"I were knowin', now, you were that kind, ever since I picks you out o' th' bay," exclaimed Bob. "You weren't losin' your head, an' by th' time I h'ists sail you was wringin' th' water outen your shirt, just as if 'tweren't nothin'. An', Mr. Trowbridge, I likes you ever since."

"Thank you, Bob, but if you want me to be your friend drop the handle from my name and call me 'Shad.' We're on an equal footing from this on."

"'Twill be wonderful hard Mr. Trow—"

"Shad!"

"'Twill be wonderful hard t' call you 'Shad'—it sounds kind of unrespectful, now."

"Not in the least," laughed Shad. "All the fellows call me Shad."

"I'll try t' think now t' do it, Mr.—I means Shad. But 'tis a rare queer name."

"Shadrach is the full name. It is pretty awful, isn't it? But doting parents cast it upon me, and I'll have to hold my head up under it."

"'Tis a Bible name, now. I remembers readin' about Shadrach somewhere in th' book o Daniel."

The canoe and boat had been gradually drawing together and now, within speaking distance, Bob called out:

"I'm thinkin' me an' Shad'll go on t' th' Traverspine or handy t' un, an' have th' kettle boiled when you comes up. We ought t' make clost t' th' Traverspine by noon."

"You an' who?" bawled Dick.

"Me an' Shad—Mr. Trowbridge."

"Oh, aye," answered Dick, "'twill save time."

"Bob's gettin' wonderful unrespectful, callin' Mr. Toobridge 'Shad!'" remarked Ed.

"'Tain't 'Toobridge,' Ed!" exclaimed Dick, in disgust. "Can't you remember, now? 'Tis Towbreg—T-o-w-b-r-e-g. You'll be callin' he wrong t' his face again."

"I'm thinkin' you be right this time, Dick," Ed reluctantly admitted.

The lighter and swifter canoe had already shot ahead and was out of hearing. Bob's mind filled with plans for the future, Shad enjoying the wide vista of water and wilderness, they paddled in silence.

The brilliant sunshine, the low, rocky shores, the spruce-clad hills rising above, with now and again a breath of the perfumed forest wafted to them upon the breeze, inspired and exhilarated the young voyagers. Shad was conscious of a new sense of freedom and power taking possession of him. The romance of the situation appealed to his imagination. Was he not one of an adventurous band of pioneers going into a vast wilderness, an untamed and unexplored land, to battle with nature and the elements?

For several hours they paddled, finally entering the wide river mouth. Here the first indication of a current was encountered, and the northern bank was followed closely that they might take advantage of counter eddies, and thus overcome the retarding effect of the midstream current.

"'Twill be noon when th' boat comes, an' we'll stop now t' boil th' kettle," Bob finnally suggested. "Th' Traverspine river is handy by. She comes into this river just above here a bit."

"Good!" exclaimed Shad. "I'm nearly famished, and I've been hoping for the last hour to hear you say that."

"Paddlin' do make for hunger," admitted Bob, as he stepped ashore on a sandy beach near the mouth of a rushing brook. "I'm a bit hungry myself. I'll be puttin' a fire on now, an' you brings up th' things from th' canoe."

In an incredibly short time the fire was lighted, and when Shad brought up a kettle of water from the river Bob had already cut a stiff pole about five feet in length. The butt end of this he sharpened and, jamming it into the ground, inclined it in such manner that the kettle, which he took from Shad and hung by its bail upon the other end of the pole, was suspended directly over the blaze.

Bob, who installed himself as cook, now sliced some fat pork to fry, while Shad gathered a quantity of large dry sticks which lay plentifully about and began piling them upon the fire.

"Oh, don't make such a big fire, now!" exclaimed Bob, when he discovered what Shad was about. "'Twill be too hot t' cook by. A small bit o' fire's enough," and he proceeded to pull out of the blaze the large wood which Shad had placed upon it.

"If there's nothing else for me to do I'll see if there are any trout in that brook," said Shad.

Shad made his first cast in a promising pool a little way from the fire, and the moment the fly touched the water, "zip!" went the reel. The result was a fine big trout. Within 20 minutes he had landed 18, and when presently the boat drew up a delicious odor of frying fish welcomed the three hungry men as they sprang ashore and made the painter fast.

"Shad got un," explained Bob, in response to an exclamation of pleasure from Ed.

"You means Mr. Trowbridge, Bob," corrected Dick, with dignity.

"No," broke in Shad, "Bob is right. Shad is my front name and I want you fellows to call me Shad; leave the handle off."

"Before I knows it a big trout swallows the little un."

"An' you wants, sir," agreed Dick. "'Tis a bit more friendly soundin'."

"Them trout makes me think," said Ed, as he cut some tobacco from a plug and filled his pipe after dinner, "of onct I were out huntin' pa'tridges. I gets plenty o' pa'tridges, but I finds myself wonderful hungry for trout, when I comes to a pool in a brook where I stops t' cook my dinner an' sees a big un jump.

"'Now,' says I, t' myself, 'Ed,' says I, 'you got t' get un somehow,' an' I goes through my pocket lookin' for tackle. All I finds is a piece o' salmon twine an' one fishhook. 'I'll try un, whatever,' says I, an' I cuts a pole an' ties th' salmon twine t' un, an' th' hook t' th' salmon twine, an' baitin' th' hook with a bit o' pa'tridge skin, throws in.

"Quicker'n a steel trap a trout takes un, but he's a little un, an' I'm so disgusted-like I don't pull he right in. Then before I knows it a big trout takes an' swallows th' little un.'"

Ed paused to lend effect to the climax, while he lighted his pipe and began puffing vigorously.

"Well?" asked Shad. "Did you land him?"

"Not very prompt," continued Ed. "I was so flustrated I just looks at un for a bit, skiddin' around in th' water. Then, while I lets un play, quicker'n I can say 'boo' an old whopper up an' grabs th' big un an' swallows he. Then I yanks, an' I lands th' three of un.

"Th' outside un were two foot and a half long an' a fraction over. I measures he. Th' next one were 19 3-4 inches long, an' th' little un were 10 inches long. Th' little un an' th' next weren't hurt much, an' not wantin' they I throws un back, an' th' big un does me for dinner an' supper an' breakfast th' next mornin', an' then I throws a big hunk that were left over away, because I don't want t' pack un any longer."

"Ed," said Dick solemnly, "you'll be struck dead some day for lyin' so."

"Who? Me lyin'?" asked Ed, with assumed indignation.

"Yes, you. You'm always yarnin', Ed. You never seen a trout moren't two foot long, no more'n I have," declared Dick.

"Oh, well," sighed Ed, while the others laughed, "they's no use tellin' you of happenin's, Dick, you always were a doubtin' o' me."

The following day at noon the Muskrat falls were reached, and here the real work and hardship of the journey began. Day after day the men were driven to toil with tracking lines up swift currents, more often than not immersed to their waists in the icy waters of the river, or for weary miles they staggered over portages with heavy loads upon their backs. To add to their difficulties a season of rain set in, and hardly a day passed without its hours of drizzle or downpour. But they could not permit rain or weather to retard their progress.

Always between sunrise and sunset they were tormented, too, by myriads of black flies and mosquitoes, the pests of the north. There was no protection against the attacks of the insects. The black flies were particularly vicious; not only was their bite poisonous, but a drop of blood appeared wherever one of them made a wound, and in consequence the faces, hands and wrists of the toiling voyagers were not alone constantly swollen, but were coated with a mixture of blood and sweat.

Shad, less toughened than his companions, suffered more than they. He was actually made ill for a day or two by the poison thus inoculated into his system, though with his characteristic determination, he still insisted, against the protests of the others, upon doing his full share of the work. Dick advised him, finally, to carry a fat pork rind in his pocket and to occasionally apply the greasy side of the rind to his face and hands. This he discovered offered some relief, though, as he remarked, grease, added to blood and sweat, gave him the appearance of a painted savage.

With the evening camp fire, however, came a respite to the weary travelers, and recompense for all the hardship and toil of the day. Here they would relax after supper, and with vast enjoyment smoke and chat or tell stories of wild adventure.

Shad contributed tales of college pranks, which never failed to bring forth uproarious laughter, while his vivid descriptions of battles on the gridiron or on the diamond, illustrated with diagrams drawn with a stick upon the ground, and minutely explained, held his hearers in suspense, until the final goal was kicked or the last inning played.

Dick and Ed described many stirring personal adventures, the latter embellishing his stories with so many fantastic flights of imagination that Shad would scarcely have known where fact ended and fiction began had Dick not made it a point to interject his warnings of the eternal vengeance that awaited Ed if he did not "have a care of his yarnin'."

One morning during the third week after leaving Wolf Bight a beautiful sheet of placid water opened before them in a far-reaching vista to the northwest. On either side of the narrow lake rose towering cliffs of granite, their dark faces lighted at intervals by brooklets tumbling in cascades from the heights above. A loon laughed weirdly in the distance, and from the hills above a wolf sounded a dismal howl. It was a scene of rugged, primeval grandeur, and Shad, taken completely by surprise, caught his breath.

"'Tis Lake Wanakapow," explained Ed. "There'll be no more trackin' or portagin'. 'Twill be straight sailin' an' paddlin' from this on. Th' first tilt o' th' Big Hill trail's handy, an' if th' wind holds fair we'll reach un by th' end o' th' week, whatever."

For the first time since their departure the voyagers were enabled to don dry clothing, with the assurance that they could remain dry and comfortable throughout the day. The evenings were becoming frosty and exhilarating. The black flies and mosquitoes had ceased to annoy. Wild geese and ducks upon the waters, and flocks of ptarmigans along the shores, gave promise of an abundance and variety of food.

With the changed conditions, in marked contrast to the toil and hardships of the preceding weeks, Shad's desire to remain throughout the winter grew. The lure of the wilderness had its power upon him.

The first tilt of the Big Hill trail was reached on Saturday, as Ed had predicted. Here camp was pitched, the boat finally unloaded, and preparation made for Dick and Bill to begin their return voyage on Monday morning.

When supper was eaten and they were gathered about the evening camp fire in blissful relaxation, silently watching the aurora borealis work its wild wonders in the sky, Shad suddenly asked:

"Are you certain, Bob, I'd not be a burden to you if I remained here all winter? You know, I'm a tenderfoot in the woods."

"Oh, no!" Bob assured enthusiastically. "You'd be no burden! An' when your feet gets tender you can bide in th' tilt an' rest un."

"I don't mean that my feet are tender in that way," laughed Shad, "but I'm a novice in woodcraft and I've never done any trapping. You'd have to teach me a great deal about these things, and I don't want to stay if I'll hinder your work in the least."

"Oh, you'd never be hinderin' th' work!

(Continued on page twenty-two.)

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Dear Mrs. Barland: I enjoy the Family Circle and will be glad if I can be of help to any one as I have received so much myself.

Some time ago a subscriber from Idaho wrote of having trouble with her bread. I had the same experience when I first came to Idaho, but at last I have learned to make very good bread.

The evening before baking I put 1 yeast cake in a glass of water with 1-2 cup of sugar and set it to one side. I boil 3 or 4 potatoes and mash them fine and put them back in the water I boiled them in and just before going to bed I mix the glass of yeast with the potatoes and let stand over night in a warm place. If foamy in the morning it is ready to mix with flour into a fairly stiff sponge; add salt and lard and enough water to make the size baking desired. Allow to rise three or four inches, then mix stiff enough to knead and knead with a circular motion so as to work air into the dough and work 25 or 30 minutes. Let rise and when light push down once with the tips of fingers, let rise again and mold into loaves. I usually bake eight or 10 loaves at a baking. From this sponge before it is mixed stiff I take out a cupful for buns and make as follows: 1 cup of sponge, 1-2 cup of butter or lard, 1-2 cup of sugar, 1 pint of warm water, pinch of salt. Mix stiff and set away till next morning then mold out small pieces of dough the size of a large marble and place far apart into greased pans and set in a warm place to rise until very light. Bake in a quick oven to a golden brown. These are fine.

I have also a splendid recipe for sour cream cake if you have room.

Dear Sister: You have given me neither name nor address, but I shall be glad to have the cake recipe, as I have had a request for one, so send it on at your convenience. If you had given address I should have written you personally. Please every one send names and addresses.

A. W. B.

Dear Mrs. Barland: The flaps of advertising envelopes or others not having been used and the glue still on, make fine labels for fruit jars.

Carriage upholstering oilcloth is best for kitchen tables as it doesn't show knife cuts and hot dishes from the stove do not injure it and it will outwear four common oilcloths.

Table oilcloth makes good kitchen aprons, saves washing and heat doesn't affect it as it does the rubber ones.

The solder off old self sealing fruit jar lids will mend holes in dippers or wash pans and other things which do not come in contact with heat.

One and a half ounces of glycerin mixed with the juice of one lemon makes very fine hand lotion; shake well before using.

Sample wall paper books are nice for papering corner cupboards, boxes for children's clothes, etc. MRS. V. V. P.

To Clean Silverware: Put your silver into an aluminum kettle with hot water enough to cover the silver, into which put a tablespoon of common baking soda and let come to a boil. Take out and rinse and you will be pleased with the result.

MRS. C. E. C.

Dear Family Circle: Will some one please send me a recipe for making chili con carni such as is served in chili parlors?

MRS. M.

Dear Mrs. Barland: Mrs. E. K. complains of her cakes being coarse and drying out quickly. Certain grades of sugar and flour may be the cause. Use cane sugar as that is best for every thing.

MRS. A. C., Portland.

There have been several inquiries regarding home-made dress forms and as they are many women living too far from any place where they can attend a demonstration given by a government agent or a representative of an agricultural college, I will give you in a letter which follows the method followed by the writer.

Dear Mrs. Barland: The ladies of this farm bureau community met in the grange hall and a government demonstrator made a dress form of gummed paper and gave a lecture while doing it. I was elected home demonstration leader and with the help of a good capable neighbor we have since made five forms, all a success.

Full directions come with the paper which comes in three sizes, large, medium and small. The directions are so plain that any neat, capable women—it takes four, two to cut and wet the tape and two to put it on—by following directions can make the forms.

The directions do not include putting the form on a standard, but we manage that in this way: After the tape is on we use a yard stick measuring from the bottom of the form to the floor at five or six different points and this will be the required height of the standard which any man handy with tools can make. We fill our forms with excelsior after they are perfectly dry. A coat of shellac improves the whole. One short arm can be put on, but I prefer none.

Canby, Ore. MRS. JENNIE EVENS.

I think it a good plan, where women are not near enough to attend a demonstration, to club together and send some one in their neighborhood, who is capable, to the nearest place where such forms are made and then meet and have her show the rest how to make the forms.

ALICE W. BARLAND.

Requests. A sister from Oregon wants to know how to put up smelts with mustard quite like sardines which we buy. If it can be done I am sure some of you women know how to do it.

Please tell me how to make potato salad. M. E. M.

Los Angeles, Cal.

Potato Salad: Boil potatoes in salted water, taking care that they are not overdone, so as to be soft. Slice while warm and with them slice very fine a medium sized onion. Set away till you wish to serve. Just before serving stir into the potatoes any good salad dressing. I will give you here an excellent one.

Salad Dressing: Melt half cup butter or use any salad oil. Add 4 tablespoons flour, stirring smooth. Put in a double boiler and sift in 2 teaspoons dry mustard, 4 tablespoons sugar, 1 teaspoon salt and a dash of white pepper. Stir in 12 tablespoons vinegar, and 12 tablespoons of water and stir constantly until thick and smooth. Take from the fire and add yoke of 4 eggs and the juice of 2 lemons (vinegar can be used in place of lemons). Before using add half as much cream either sweet or sour. If your vinegar is very sour use more water and less vinegar. This makes quite a good deal and will keep for some time in a cool place.

A. W. BARLAND.

Dear Mrs. Barland: Mrs. L. H.'s letter in THE FARMER of January 12 with its many useful hints was just what I have been looking for. I hope Mrs. L. H. will let us hear from her again, and the letter of Mrs. B. M. L. certainly is fine also and right to the point. I heartily agree with her. I think it is kind of these wise and experienced women to share the riches of experience with the readers of our page.

MRS. E. S.

Dear Mothers: One of the sisters has sent me a list of books on child training; I will send list and address where to get to all who write and ask for it.

ALICE W. BARLAND.

Dear Mrs. Barland: As the home is the most important part of the farm I would like to see more of these letters which pertain to the better home making, housekeeping and easier methods of doing work.

Here is how I put away meat for summer use:

I can beef by sterilizing it three hours. I cut it into convenient pieces for serving and pack it into jars, adding 1 heaping teaspoon of salt to each quart of meat. I can a quarter or half a beef every winter. I cook sausage just as for the table, also back bones and ribs of the pork and pack in stone jars, then pour fresh hot lard over them and cover carefully to keep out dust, etc. This is fine in the spring and though it makes a little extra work at killing time I find it a saving as there are so many scraps to use up. Will some one send a recipe for making weinies, also will some one send directions for crocheted slippers such as we sew soles on that one can buy.

I am the mother of three small children and am interested in all letters from mothers, as our problems are similar.

This part of Idaho is devoted chiefly to wheat raising with a few cows, hops and chickens as side lines. Should any one wish to write to me Mrs. Barland has my address. MRS. E. G.

Idaho.

Home Helps

By MRS. C. B. SMITH.

When a room has an unpleasant odor of dampness burn a little powdered cinnamon on the stove to sweeten the air. An oil heater may be used in the absence of any other kind of stove.

If your cabinet or dresser drawer has an annoying way of sticking, take it out and rub the parts causing the friction with melted paraffin or prepared floor wax.

Nickel-plated trimming on stoves sometimes becomes flecked with rust. To remove it rub with a paste made by mixing common baking soda with ammonia. Polish with a sheep mitt or a piece of dry flannel.

When boiling a good-sized piece of meat there will be no danger of its weight causing it to burn to the bottom of the kettle if a lid to a tin pail is placed bottom side up under it. One belonging to a gallon sirup pail is best. It should be punched full of holes to allow for the free circulation of the water.

If new machine needles are dipped in light oil before transferring to the receptacles in the machine drawer they will stay bright indefinitely.

Mustard and spinach greens keep better when canned if three or four tablespoonfuls of vinegar is added to each quart before processing.

For frozen sink drains, pour in a small quantity of strong brine.

Before discarding a garment of particularly attractive design or fit, rip carefully apart and cut a pattern from it. With a little ingenuity one can fashion many variations from the same pattern.

Home-Made Fireless Cooker

The home-made fireless cooker is often made without the circular stones in the bottom, which are heated before being placed under the food, to hold the heat. Such stones can be made very easily from concrete, according to Mrs. D. J. Brink of Montesano, who reports her success to the extension service of the Washington State college. The following instructions can be followed and stones made at a cost of 5 cents each, with only a few minutes' time.

Use one part sand by volume to two parts cement mixed well and add 28 parts water to 10 0parts cement and sand by weight. Make a mold of a band of galvanized iron or other nonrustable metal and place on pane of glass, then pour the material into the mold, smoothing off the top.

If it is desired to reenforce the stone a piece of sand screen or long nails may be used, though it is not absolutely necessary. When it is reenforced pour the mold half full of the material, smooth, add screen or nails, fill mold, smooth and let stand till dry. It costs approximately 5 cents for an eight-inch stone, and one sack of cement will make 25 stones.

Paper Dress Forms

If a woman intends planning and fitting new garments for herself or for a member of the family away from home, to remodel old dresses or alter ready-to-wear clothes, she will find the paper dress form exceedingly useful in her sewing room, according to a circular of the United States department of agriculture.

So many requests for further information on the subject have reached the department that department circular 207, the paper dress form, has been prepared and may be had upon request to the department of agriculture, Washington, D. C.

LOST If you can't locate a thing, it might as well be lost. Maybe the very thing you want is offered on our "Want Ad" page in this issue.

Glance over the bargains on the "Want Ad" page.

Why Some Things Are Not Advertised

"Several business men in Chicago incorporated a company to manufacture and sell vacuum cleaning machines," writes a business expert in Collier's Weekly. "About $50,000 capital was subscribed, a large proportion of which was to be invested in advertising.

"To assure the success of the new venture, the president of the company wisely decided to determine for himself the efficiency of the vacuum cleaner they contemplated manufacturing and advertising; so he took home one of the machines, and without letting his family know that he was interested financially, had it tried on his own rugs and carpets.

"He found that the machine had several faults—that it had not been developed to a point of real efficiency where it would satisfy the average user. This was enough. The plans for the advertising campaign were given up. He knew that no permanent advertising success could be built on the foundation of an articlee that only partly performed what was claimed for it.

"Right here you have the real reason why thousands of manufacturers are not advertising. They may claim—most of them will —that their product is equal in quality to any that is sold. The claim of 'best goods at lowest prices' is the commonest and the most meaningless of any in the business world.

"But in their own minds they know only too well that what they assert to be the pure gold of their product will not stand the acid test of advertising. When a product is advertised there can be no retreat, no going back on the published statements. What is said of it must be lived up to. Unless the people who buy it keep coming back for more, the advertising investment is money thrown away."

With the above facts in mind, you can readily understand why The Washington Farmer strongly urges its readers to patronize its advertising columns.

High Points in News of the Week

By a vote of 67 to 27 the United States senate last week ratified the four-power treaty between this country, England, Japan and France looking toward the peaceable control of international affairs on the Pacific. Twelve democrats voted for the treaty and four republicans opposed it. All senators of Washington, Oregon and Idaho, with the exception of Senator Borah of Idaho, voted for the treaty. The other three republicans opposing it were Senators Johnson of California, LaFollette of Wisconsin and France of Maryland.

Several attempts were made to attach reservations to the treaty before ratification. The only reservation that was adopted, however, was one declaring that the United States "understands that under the statement in the preamble, or under the terms of this treaty, there is no commitment to armed force, no alliance, no obligation to join in any defense."

It is claimed by the friends of the treaty that all purely defensive relationship between the various nations are outside the scope of the treaty itself. Among such questions is that of Japanese immigration, which friends of the treaty claim is a matter for this country and Japan to handle alone without submission to a conference of the four nations. This is a point on which considerable controversy has been waged during the debate of the treaty.

There are still several treaties before the senate for ratification as the result of the work of the recent conference of the limitation of armaments. It is believed, however, that all others will have smoother sailing in the senate than did this most important one, the four-power treaty.

* * *

American ambassadors to Great Britain France, Italy, Belgium and Japan have presented official statements from Secretary of State Hughes to these governments making it clear that the United States expects to be paid the maintenance cost of its soldiers in the allied army of occupation in Germany. The note states that the American soldiers were sent into Germany with the understanding that this country should be paid the actual cost of maintenance out of the reparation funds secured from Germany. The amount due approximates $240,000,000.

* * *

Political interest in the country was centered last week in a congressional district in Maine, where John E. Nelson, a republican, was elected over his democratic opponent to fill a vacancy made by the resignation of the former congressman from that district. Nelson's majority was about 6000. The republican majority in the same district at the last election was about 19,000. Less than half as many votes were cast in the election last week as in the last previous election.

* * *

Up to this writing all efforts at settling the controversy in the coal mining industry have failed and it appears that a strike of approximately 600,000 miners on April 1 is inevitable. The strike has been called on the ground of the refusal of the mine owners to enter into a further agreement with the mine workers for wages and working conditions equivalent to those that have been in operation since the wartime agreement was prepared. The high cost of mining coal is reported to be the chief cause of trouble in the coal mining industry at the present time. The cost of mining is declared to average over 100 per cent higher today than in 1914. Wages are said to constitute about 70 per cent of the operating costs, having not been greatly reduced since the increase during the war.

* * *

The Northern Pacific Railway company announces its intention to spend $16,000,000 this year in railroad improvement and construction. Of this amount about $3,200,000 will be expended in the states of Oregon and Washington.

* * *

The lower house of congress last week passed the soldiers' bonus bill by the overwhelming vote of 333 to 70. Those voting for the bill included 242 republicans, 90 democrats and one socialist. Those opposing it included 42 republicans and 28 democrats. The only representative from the Pacific northwest voting against the measure was Congressman McArthur of Oregon. The measure provides for the payment to ex-service men of a sum estimated to approximated $4,000,000,000. It would give the exservice man four options to choose from as his method of receiving the cash payment or its equivalent. These options are:

(1) Adjusted service certificates, with provisions authorizing loans by banks in the first three years after next October 1 and by the government thereafter; the certificates to run for 20 years and to have a face value at maturity of the amount of the adjusted service credit at the rate of $1 a day for domestic service and $1.25 a day for foreign service, increased by 25 per cent plus interest at the rate of 4 1-2 per cent, compounded annually.

(2) Vocational training aid after January 1, 1923, at the rate of $1.75 a day, the total payments not to exceed, however, 140 per cent of the adjusted service credit.

(3) Farm and home aid under which veterans purchasing or improving farms or homes would be paid after July 1, 1923, a sum equal to their adjusted service credit increased by 25 per cent.

(4) Land settlement, under which lands would be reclaimed under the supervision of a special board and farm units established for sale to the veterans at a price fixed by the board, less the amount of the adjusted service credit due the purchasers.

DEPLETING YOUR FARM.

Failure to keep farm manure in the best method and return it to the soil is one method of depleting your farm.

Farm Business and Markets Outlook

(Continued from page five.)

FRUITS AND VEGETABLES.

Potato shipments from the producing sections were heavy again last week and the market declined. The movement is at the rate of about 5000 cars per week. Total shipments for the season to date have amounted to 191,786 cars, compared with 168,711 cars in the same period last year. The 18 leading states have shipped 139,536 cars, or 27,000 cars more than to this time a year ago and almost as much as they shipped in the entire season a year ago. Growers are receiving 70 to 80 cents per 100 pounds for sacked Rurals in wagonloads at Colorado and Idaho shipping points.

Cold storage holdings of apples on March 1 were 988,557 barrels and 6,209,275 boxes, or a total equivalent to 3,058,315 barrels, compared with 3,649,208 barrels on March 1, 1921. The five-year average is equal to 2,771,000 barrels, so that the remaining supply is above normal. The market is about steady. Much barreled stock is of poor quality. A-2 1-2 Baldwins are quoted at $7 to $8 per barrel and northwestern extra fancy Jonathans at $2.75 to $3.75 per box in consuming markets.

E. A. Stuart Elected President

E. A. Stuart, president of Carnation Farms, near Seattle, has been elected president of the Pacific International Live Stock exposition, succeeding F. S. Stimson, whose death occurred in Seattle last Thanksgiving. Mr. Stuart, who was absent in Philadelphia attending the Brentwood sales of Holsteins, wired Secretary-Manager Plummer that prices were running around $635. He also informed the board that the Holstein Breeders' National association has voted to make its contribution to the premium list of the Pacific International equal to the value of premiums to the National Dairy show.

T. T. Miller of Pacific Grove, Cal., has been elected to the board of directors to represent California interests at the Pacific International.

GENUINE GRIMM ALFALFA SEED

Certified-Guaranteed

A Wonderful Soil Improver, Orchard Covering and Pasture

The extensive branching root system of GENUINE GRIMM produces an abundance of nitration and humus and leaves the soil in excellent mechanical condition when plowed under.

It is unexcelled as a covering for orchards and pasturage.

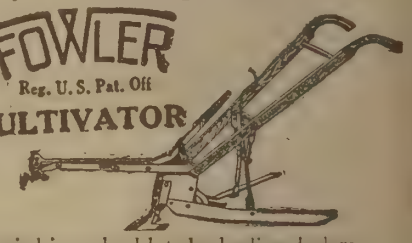
Seeding cost practically as low as common alfalfa.

Insure your crop by purchasing in the original sealed and labeled bags.

Write for information and prices.

IDAHO GRIMM ALFALFA SEED GROWERS' ASSOCIATION

Blackfoot, Idaho.



It Works Like a Hoe

The FOWLER Light Draft Cultivator makes ***bigger crops*** because it does not disturb plant roots. It puts the land in perfect condition to absorb rain, and makes a mulch of fine dust which conserves plant food and prevents the escape of moisture.

Covers 8 acres a day with one horse. One trip to the row. ***Cuts every weed.*** Does as good work as you can do with a hoe. ***Saves time and labor.*** Remove the plow foot, and you can cultivate astride the row.

The ideal cultivator for potatoes, corn, tobacco, beans, beets, tomatoes and truck crops. Can be adjusted to cultivate above or below the level, without disturbing the sides of the ridges.

FOWLER Reg. U. S. Pat. Off CULTIVATOR

Carried in carload lots by leading dealers.

BETTER GARDENS EASY TO KILL WEEDS AND MULCH THE SOIL

BARKER WEEDER, MULCHER AND CULTIVATOR

Don't do garden work the slow, backbreaking way. The BARKER makes the finest gardens possible—quickly, easily. Simply push along rows (like lawn mower)—8 blades revolving against underground knife destroy the weeds and in same operation break the crust into a level, porous, moisture-retaining mulch. Aerate soil. "Best Weed Killer Ever Used." Has leaf guards, also shovels for deeper cultivation. A boy can run it—do more and better work than 10 men with hoes.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

It always makes me sad to see a boy or a girl with neglected teeth. When you grow older you will regret your failure to care for every one of your 32 teeth.

Dr. Copeland.

Nothing adds more to a face than a set of perfect teeth. But, no matter how ugly and irregular your teeth may be, every tooth is precious. You can not afford to lose a single tooth. Your health, your comfort and your length of life depend on good teeth.

Digestion is aided to a considerable degree by the thoroughness of chewing the food. You can not chew your food as you should if you lack teeth, or have decayed and painful teeth, or if your gums are inflamed and sore. In these days we talk a lot about "focal infection." "Pus absorption" is given as a possible cause of a lot of diseases. There is no question that a pocket of pus in some part of the body will be gradually absorbed and, in time, have pronounced effects upon distant and important organs.

No examination to find the cause of an obscure condition is considered complete unless the teeth and gums have been examined and the jaws X-rayed.

I must protest, however, against the treatment which sometimes follows such an examination. Teeth should not be sacrificed unless there is no other hope of dental relief. The doctor and the dentist and the X-ray expert should be agreed, if agreement is possible, before the tooth is extracted.

An old carpenter who has worked for me on many occasions, is a great philosopher. I like to talk with him about his work. Here is one of his rules and a fine one it is :

"Measure 10 times—cut once."

When it comes to losing a tooth, "measure 10 times—out once," is a procedure I recommend.

A prominent dentist, a long-time friend of mine, told me the other day that not 20 per cent of persons find the slightest improvement of remote ailments after tooth extraction.

Don't misunderstand me! If you have a tooth that is actually abscessed it must be given surgical treatment. But before you have it out, make sure there isn't some method of drainage or treatment which will enable you to save that tooth. If you are fully convinced to the contrary, then, of course, the tooth must be removed.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3902. Lady's Dress. Cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. The 38-inch size requires 3 1-4 yards for the slip of 44-inch material and 2 1-4 yards of 40-inch material for the bolero. The width at the foot is 2 1-2 yards. Price 10 cents.

3857. Misses' Dress. Cut in three sizes: 16, 18, and 20 years. An 18-year size will require 4 5-8 yards of 38-inch material. The width of the skirt at the foot is 2 yards. Price 10 cents.

3904-3513. **Lady's Costume.** Waist 3904 cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. Skirt 3513 cut in six sizes: 24, 26, 28, 30, 32, and 34 inches waist measure. The width at the foot is 1 3-4 yards. To make the dress as illustrated, will require 6 1-8 yards of 36-inch material. Two separate patterns, 10 cents for each pattern.

3206. Child's Play Dress. Cut in four sizes: 2, 4, 6, and 8 years. A 4-year size will require 3 3-8 yards of 27-inch material. Price 10 cents.

3920. Child's Dress. Cut in four sizes: 2, 4, 6, and 8 years. A 6-year size requires 2 1-4 yards of 36-inch material for the dress and 1 3-8 yards for the gumpe. Price 10 cents.

Bits of Fun for Everyone

Time to Check 'Em Up.

When General Pershing once inspected an artillery outfit of colored negro soldiers in France he was struck by the soldiery bearing of one particular dusky member of a gun team.

"What are you duties, soldier?" queried the commander in chief of the artilleryman, who stood like a statue beside the French Soixante Quinze.

"I'se de doah tender to de Swasohng Kans," the husky lad replied.

"And what is that?" General Pershing asked him.

"Why, I jus' opens de little doah in back o' de gun, and Rastus here throws a shell in and de corporal pull de lonyard Den the gun she has her little say?"

"Then what do you do?" the chief commanded.

"What do we do? Huh, we jes' drops back and say: 'Kaiser, count yo' soldiers.'"—Disabled Veteran Magazine.

Three Sweetest Words.

There are three words, the sweetest words
In all the human speech—
More sweet than all the songs of birds,
Or pages poets preach.
This life may be a vale of tears,
A sad and dreary thing—
Three words, and trouble disappears
And birds begin to sing.
Three words, and all the roses bloom,
The sun begins to shine;
Three words will dissipate the gloom
And water turn to wine.
Three words will cheer the saddest days—
"I love you!" Wrong, by heck!
It is another, sweeter phrase,
"Enclosed—find—check."

—Brown Jug.

Lem and Dave.

A set of twins, who looked exactly alike at birth, looked exactly alike in their boyhood, exactly alike as young men and exactly alike as old men. They dressed exactly alike and became one of the sights of the town, so to speak. When they were old, one of them lost all his teeth, but his cheeks were so plump that this did not alter his appearance. And a farmer, one day, explained that the only way you could tell the twins apart was to put your finger into Lem's mouth and if he did not bite you it was Dave.—Boston Globe.

She Did Her Best.

"Mary, were you entertaining a man in the kitcheon last night?" "That's for him to say, mum. I was doing my best with the materials I could find."—Liverpool Mercury.

Evident.

"You are charged with evading the law."
"If I had succeeded in evading it, your honor, I wouldn't be here."—Louisville Courier-Journal.

The Black Watch.

"The wrist watch has done much for our trade."
"Where is your trade?"
"It is mainly in Africa. Formerly we couldn't sell a native a watch because he didn't have a pocket to carry it in."

All of One Family.

The best proof that all human beings are alike is that each thinks himself a little different. New York Evening Post.

Why You Will Succeed in Western CANADA

Come to Canada! cries opportunity. Here men can succeed.

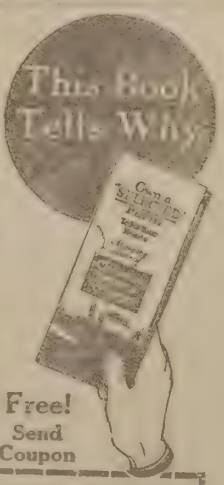
Lands are reasonably priced—sufficient acreage to meet all needs—of virgin fertility—living conditions are good. Crop conditions are satisfactory.

If you are a tenant farmer, ambitious to own your own farm—or if you are farming under the handicap of drought, or overcrowded conditions—or if you are looking for an opportunity where your boy can own his farm—investigate Canada.

This Is a Message of Opportunity

Come from the place where men call for land to the place where land calls for men.

This department of the Canadian National Railways will help you locate just the kind of farm and locality best suited to you. Our services and all that we know about Canada are at your disposal free.



Our special descriptive folder will answer your questions and tell you where, how, and why other men have succeeded. Send coupon now—no cost or obligation.

Low Prices—Easy Terms—Taxes

You can buy land unsurpassed for fertility and suitable for grain growing and mixed farming along the lines of the Canadian National Railways for from $20.00 to $50.00 an acre. The value of one year's crop has been known to pay in full for a farm in Western Canada. Easy terms. Small first payment. Small land tax. No tax on buildings, improvements, animals, machinery, or personal property. Send for your free copy of our booklet now!

Carson Lemke is a 9-year-old cousin whose home is near the Yakima river, in southern Washington. June 10 is his birthday. Carson is in the second reader at school.

We have a short letter from Muriel Hansen, who was 7 October 16, 1921. Muriel's home is also in Yakima valley, southern Washington.

Dick Willms of western Spokane county, Washington, lives on a farm where there are 19 head of cattle and 13 horses. Dot is his pet pony. Dick's birthday is January 10. He is 11 years old.

Louis Willms, an eastern Washington boy, was 9 years old March 15, 1922. Louis has five brothers and four sisters.

We are glad to hear from Gerald Stover, whose home is in southern Washington Gerald's birthday is September 13. He is 7 years old.

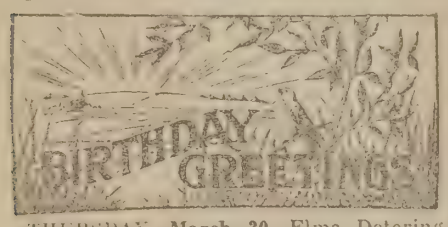
Arithmetic, spelling, reading, language, geography and writing are the studies Mildred Page has at school. Mildred likes arithmetic, spelling and geography the best. March 22, 1922, she was 11 years old She has six sisters and one brother. Their home is in central Washington, Chelan county. Mildred says she has good times at school.

Teddy is a puppy a month and a half old. He belongs to Clara Hykas, who lives in southwestern Washington at the mouth of the Columbia river. A nice, big cat is another pet. Clara's birthday is August 23. She is 11.

Roy W. Ellis, who was 11 years old December 31, 1921, writes his first note to Aunt Nellie. He lives in southern Washington, north of the Yakima Indian reservation. Write again, Roy.

"I am planning on having a very good time this summer," says Martha Lee, who lives near the Big Quilcene river, in northwestern Washington. Martha says they have a new play shed at school for bad weather. They are going to play basketball in it. One day recently they cleaned up the school yard. Every year they do that. Bill—I had a fight with a candle last night. John—Who won? Bill—I did I put it out with one blow. What is the cheapest part of your face? Your nostrils. Two for a cent (scent).

Maurice Gerritsen writes his first letter to the Corner. He says: "I live on a 20-acre farm. We have one cow, two horses, two pigs, about 17 chickens, four cats and a dog. One of our pigs has a turned-up nose." Maurice was 10 years old February 25, 1922. He lives in southern Washington, Yakima county.



During his vacation last year Carl Gilmore went to Doty and picked berries while he was there. He picked about four gallons and had a good time. He had a nice, big cake for his birthday while he was there, too. Carl hopes the cousins and Aunt Nellie will have a happy Easter. He is a southwestern Washington boy and is 9 years old. His home is in Lewis county.

Lena Rayburn lives in a big two-story house, painted cream with white trimmings, in eastern Washington. She says: "We raise wheat and have hogs, chickens, cats, a dog, horses and mules." Lena is in the seventh grade at school and there are 20 pupils in her class. Twelve are boys. (The Junior Farmer comes out the first Thursday of every month, Lena.)

Mildred Gallagher says school will soon be out and they are already preparing for examinations. Mildred is going to send Aunt Nellie a picture of herself and her pet calf. Rose. Rose isn't a bit afraid of her. Mildred's home is near the Canadian border line in northeastern Washington.

One of Bessie Choufty's friends told her about The Junior Farmer and that is why she wrote to Aunt Nellie. October 24, 1922, she will be 11 years old. Bessie is a southwestern Washington girl and lives near the Cowlitz river, in Lewis county She has one sister and five brothers.

Bessie Smathers, who is 9 years old, is having a nice time with her grandma in Kittitas county, Washington. She goes to school and is in the third grade. Her daddy is in Yakima.

THURSDAY, March 30—Elma Detering, 10 years old; Hjordis Fjerlie, 10; Viola M. Robbins, 9; Viola Schoessler, 10; Edith Anderson, 11.

FRIDAY, March 31—Gladys Hammer, 9 years old; Katherine Martinson, 11; Sarah West, 10.

SUNDAY, April 2—Edwin Bushnell, 6 years old; George Lavos, 8; Hazel Prien, 10.

MONDAY, April 3—Jennie Druml, 10 years old; Lola Hollenshead, 10; Dorothy Hood, 11; Mary Adeline Seaton, 11; Johnnie Setala, 11.

TUESDAY, April 4—Ralph Bowers, 10 years old; Eunice Knight, 7; Julia Lundblad, 11; Lloyd Templin, 11.

WEDNESDAY, April 5—Dorothy Andreas, 11 years old; Nina Hoikka, 11; Frances Warwick, 7.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

WHY FLITTER THE BAT CAN FLY.

The Merry Little Breezes of Old Mother West Wind did not let Grandfather Frog forget that he had promised them a story. One afternoon, when they had grown tired of romping on the Green Meadows, they danced over to the Smiling Pond and settled around the big green lily pad on which Grandfather Frog was dozing. All together they shouted:

"We know you're old;
We know you're wise;
And what you say
We dearly prize.
So tell a tale
Of olden days
And then, mayhap,
We'll go our ways."

"Chugarum! What shall it be about?" demanded Grandfather Frog.

"Tell us why Flitter the Bat can fly when none of the other animals can," cried one of the Merry Little Breezes.

Grandfather Frog cleared his throat several times and then he began. This is the story he told:

"Once upon a time, when the world was young, old Mr. Bat, the many times great-grandfather of Flitter, whom you all know, lived in a cave on the edge of the Green Forest. Old Mr. Bat was little, quite as little as Flitter is now. He didn't have any wings then. No, sir, old Mr. Bat had no wings.

"Now old Mr. Bat's teeth were small and not made for cracking hard seeds and things of that sort, so he lived mostly on insects. He used to hunt for them under sticks and stones. Sometimes he had hard work to find enough for a meal because, you know, so many other Green Forest people were hunting for them too.

"Now old Mr. Bat's eyes were very small, very, very small indeed. They were so tiny that the bright sun hurt them. So old Mr. Bat used to stay in his cave all day and hunt for his meals only after jolly Mr. Sun had gone down behind the Purple Hills. When he did come out most of the crawling bugs had gone to bed, and it was hard work finding them. So often Mr. Bat went hungry.

"One night old Mr. Bat noticed that at twilight a great many bugs fly about. He sat on a big stone at the mouth of his cave and watched. It seemed to him that the air was full of bugs. By and by a big fat fellow came so near that old Mr. Bat forgot where he was and jumped for him—jumped right off the top of the big stone! Of course he got a hard tumble, but he didn't mind it a bit, for he had caught the bug. After that old Mr. Bat used to spend most of the time he was awake jumping for bugs.

"One night he made a very long jump from a very high stone and got such a fall that all the breath was knocked out of his funny little body. When he had got his breath back he discovered that some one was looking down and smiling at him. It was Old Mother Nature.

"'Pretty hard work to get a dinner that way, isn't it, Mr. Bat?' asked Old Mother Nature.

"Mr. Bat allowed that it was.

"'How would you like to fly?' asked Old Mother Nature.

"Mr. Bat allowed that that would be very fine indeed, but was quite out of the question because, as you know, he hadn't any wings.

"Old Mother Nature said no more, but something seemed to be tickling her greatly as she left Mr. Bat. The next evening when old Mr. Bat awoke he really didn't know whether he was himself or not. His legs were much longer than they used to be and really of no use at all for walking. Between them was a queer, thin skin. He couldn't run. He couldn't even crawl very well.

Old Mr. Bat Found That He Could Fly.

"At last, after much work, he managed to get to the top of a big rock. He was very hungry, and when a big fat bug came along he forgot all about his troubles and tried to jump. But instead of jumping as he always had, he just tumbled off the big rock. As he fell he spread out his legs. What do you think happened? Why, old Mr. Bat found that he could fly.

"And ever since that time the bats have lived in dark caves and have been able to fly," concluded Grandfather Frog.

The Gaunt Gray Wolf

(Continued from page eighteen.)

An' you'd be a wonderful lot o' company, whatever! I hopes you'll stay, Shad!"

"Thank you, Bob. I'll stay. It will put me back a whole year in college, but I'll stay, anyhow. My experience with you will be worth the sacrifice of a year in college, I'm sure."

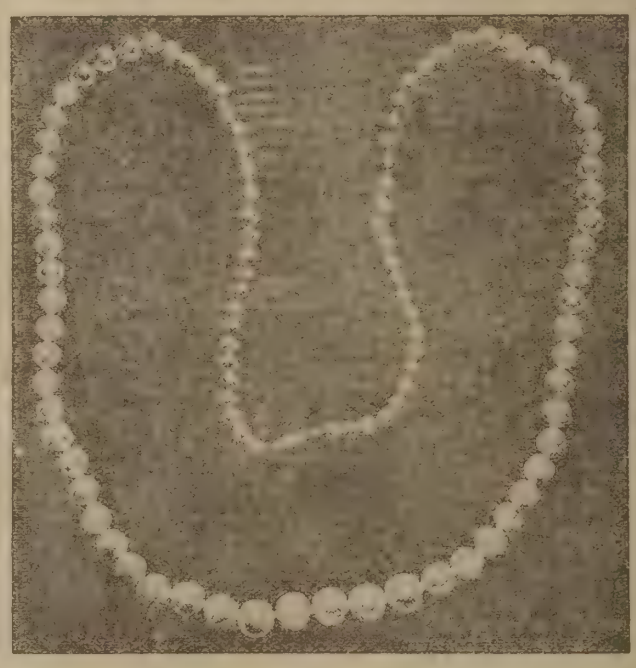
"Now that be grand!" exclaimed Bob, his face beaming pleasure.

"An' Shad stays, Ed, he'll give Bob a hand with th' tilts," suggested Dick. "Can't you go back, now, with me an' Bill, t' help us up with our outfits? 'Twill be a wonderful hard an' slow pull for just th' two of us."

"Be you thinkin', now, you can manage th' tilts?" asked Ed, turning to Bob.

"O' course me an' Shad can manage un," assured Bob.

"I'll go back, then, Dick," consented Ed. "'Twould be hard t' manage with just two on th' boat."



Arrangements were made for the three trappers to bring Shad some adequate winter clothing upon their return, letters were written home, and at daylight on Monday morning adieus were said. Bob and Shad stood upon the shore watching the boat bearing their friends away, until it turned a bend in the river below and was lost to view.

"We'll not see un again for five weeks," said Bob regretfully, as they retraced their steps to the embers of the camp fire over which breakfast had been cooked.

"And in the meantime," began Shad gaily, with a sweep of his arm, "we are monarchs of all——" Suddenly he stopped. His eyes, following the sweep of his arm, had fallen upon two Indians watching them from the shadows of the spruce trees beyond their camp.

(To be continued.)

Pearl Beads Our Newest Prize

Pearl beads are always in style and were never as popular as they are right now, and just think, only two 3-year new or renewal orders will win for you this dandy 24-inch string of graduated Pearl Beads. There is a string of these pretty beads waiting for you — get yours while the getting is good.

VARNUM BOYS RAISE LIVE STOCK.

Gerald and Harvey Varnum of Mabton, Wash., besides being members of the Hercules beef club, with two steers each, are members of a pig club, of which their father, George Varnum, is leader. The boys each have purebred Poland China gilts, purchased from T. S. Lister, of Sunnyside, Wash., and bred to C. B. Cox's herd boar, Big Sam. Gilts and the boar are of big type. Each of the boys now has six registered Poland Chinas and expects to become a regular breeder.

IN "100 PER CENT PURE" CLASS.

Through the fact that its only member with a grade bull at the head of his herd dropped association testing for the coming year, the Clallam County Cow Testing association was enabled to enter the list of those with 100 per cent purebred bulls. There are now 17 such associations in the west, of which one other, the Snoqualmie, is in Washington. Oregon has one, the Smith-Umpqua, and all those in Idaho, the Pioneer, Jerome, Gooding, Ada and Wieser-Payette, are in the "100 per cent pure" class.

BERKSHIRES AND SHORTHORNS.

Headed by Riverby Duke 7th, a son of Royal Dominator, J. Alva Bull of Ellensburg, Wash., has a little herd of Berkshires to be proud of. Mr. Bull has one good daughter of the great breeding boar, Laurel Champion, and others of Dominator and Laurel Champion strain. Mr. Bull also keeps a small herd of registered Shorthorns.

BUYS SEVEN WAIKIKI CALVES.

Seven head of purebred Jersey calves were purchased by A. F. Eacrett of Port Angeles from the Waikiki herd of Spokane. Mr. Eacrett is developing a herd of purebred Jerseys, according to a report from County Agent A. W. Holland.

NEW TESTING ASSOCIATION.

A cow testing association has been organized in Lewis county by County Agent B. G. Fowler with 373 cows. Cowlitz county will be included in the association and the tester will have 100 cows to look after in that county. E. A. Donaldson was elected president, H. B. Taylor vice president and A. T. Flagg secretary-treasurer.

Farm Bureau Market Wireless

A daily radio agricultural news service has been established through the efforts of the American Farm Bureau federation, which will function for the American Farm Bureau federation, the Illinois Agricultural association, the National Live Stock Producers' association and the United States Grain Growers, Inc. Each evening at 6:30 agricultural and market news from these organizations and from the industry in general will be broadcasted to rural communities from the Westinghouse dispatching station in Chicago.

Receiving sets are already being used by many county farm bureau organizations; cooperative shipping associations and cooperative elevators are using receivers to get the latest market development and more and more individual farmers are installing the equipment.

"The service will serve farmers as the stock tickers serve the brokers," says Fred L. Petty, who is the new editor of the service, "and in addition to general agricultural news will contain news of the marketing centers and the latest developments of interest to rural communities."

It is apparent that the development of wireless communication is just beginning and that its possibilities are little short of boundless. Communications between elaborate sending and receiving stations have been practiced successfully for several years, but it is only recently that it has become possible to receive messages with simple and comparatively inexpensive instruments. While there are yet many problems only partially solved, it is not a wild guess to predict that in oly a few years a large percentage of the population of this country, both city and rural, will have provided themselves with receiving instruments by means of which they may be in touch with the rest of the world for all manner of informative and entertaining communications.

It has been recommended that the secretary of commerce be given adequate legal authority for the effective control of the establishment of all radio transmitting stations except amateur, experimental and government stations and of the operation of nongovernmental radio transmitting stations on the grounds that radio communication is a public utility, and as such should be regulated and controlled by the federal government and public interests.

The Fall Fair Dates

At its recent meeting the North Pacific Fair association arranged dates for the principal fairs of the northwest, as well as racing programs.

The fairs and their dates as agreed on are as follows: Multnomah county, Gresham, Ore., August 7-12; Skagit county, Burlington, Wash., August 14-19; Vancouver, B. C., August 19-27; Southwest Washington, Chehalis-Centralia, Wash., August 28-September 2; Grays Harbor, Elma, Wash., September 5-9; Interstate, Spokane, Wash., September 4-9; New Westminster, B. C., September 11-18; Walla Walla, Wash., September 11-18; Washington state fair, Yakima, Wash., September 18-23; Oregon state fair, Salem, Ore., September 25-30; Linn county, Albany, Ore., October 3-7; Sherman county, Moro, Ore., October 10-14.

A uniform race program was agreed on for four days of racing, those fairs holding more than four days to add such events as may suit them. The pacing races will consist of a free for all, a 2:12, 2:17 and 2:24. The trots will be a 2:10, 2:16 and 2:24. The entry fees for harness races are the most liberal in the history of these events, only 1 per cent being required to enter and 2 to start. A license fee of $10 will be charged, but the entire entrance fee will be added to the purse. Running races will be arranged by each fair. It was decided to entirely eliminate games of chance from all fairs in the circuit, but to give more encouragement to the breeding of both driving and running horses by more and larger purses.

C. E. Gates of Medford, Ore., is president for the 1922 season; Nels Nelson, New Westminster, B. C., vice president, and H. C. Browne of Portland, Ore., secretary-treasurer. Of the racing association, George R. Walker of Chehalis, Wash., is president; C. H. Palmer, Elma, Wash., vice president; R. R. Somerville, Centralia, Wash., treasurer, and H. C. Browne, secretary.

Grays Harbor Plans Jersey Tour

Jersey breeders of Grays Harbor are anticipating a Jersey tour some time this summer, which will probably be staged in conjunction with one of the nearby counties.

Members in attendance at the meeting held late in February voted to assist in the organization of calf clubs throughout the county in the absence of a county club leader. The Jersey breeders expect to have an unusually fine showing at the county fair at Elma this fall.

The following officers were elected for the year: J. R. Martin, Satsop, president; Parker Askew, Wynoochee, vice president; E. E. Hale, Montesano, secretary-treasurer; directors, E. L. Brewer, Satsop; J. H. Taylor, Wynootchee, and Merrit Twidwell, River.

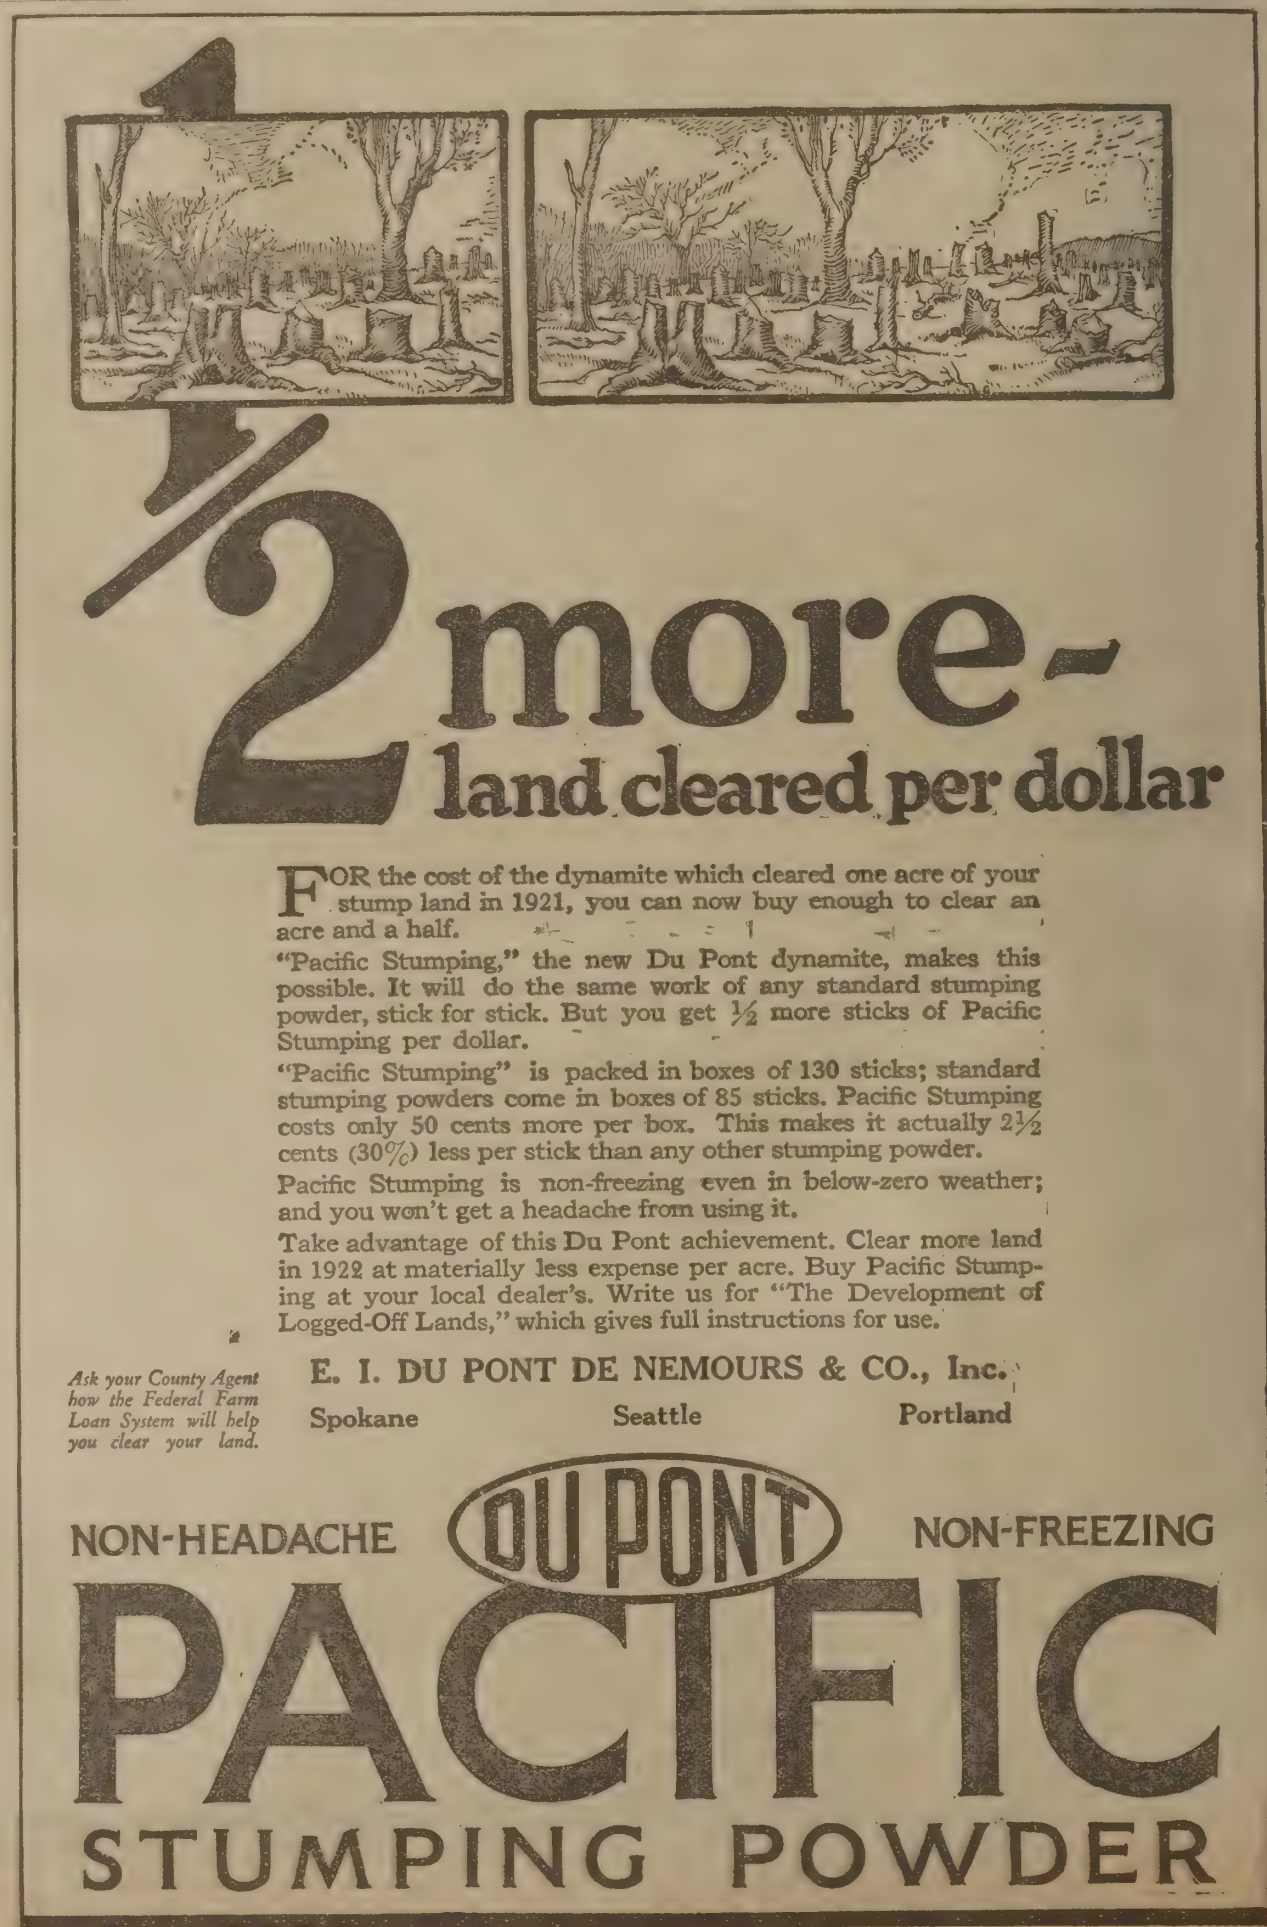
News for Breeders

COUSINS BUYS HERD SIRE.

J. M. Cousins of Yakima recently purchased from Taranaki Holstein farm, near Prosser, a son of Pietertje Beauty Prospect, for use as a herd sire on his home ranch. The dam is Cascade Mary Korndyke, one of the six daughters of Sir Korndyke Ormsby Piebe which E. F. Benson purchased from William Todd & Sons a year or more ago. She herself has an enviable butter record: her sire ranked third highest in the United States last year, and the young bull's sire is a brother of Segis Pietertje Prospect, the 37,000-pound cow.

HARBOR HILL BREEDING.

Another bull of Harbor Hill breeding, to use in combination with the one which they purchased at the Yakima Valley Guernsey Breeders' association sale in the summer of 1920, has been secured by F. A. Majewski, Joe Vance, Ray N. West, E. W. Petzel and R. T. Peterson, members of the Yakima Guernsey Bull association. He is a yearling bull sired by a son of Imp. Masher's Galore and out of a daughter of King of Chilmark, the former being rated as one of the four best bulls of the Guernsey breed and the latter ranking third among all Guernsey bulls for butterfat production of their daughters. A half interest in the youngster was purchased for $700 from F. K. Babson of Four Pine farms, Chicago, Ill., who could not be induced to sell him outright.



WASHINGTON'S AVERAGE HIGHER.

The average for the Shorthorns at the sale at Davis, Cal., during Stockmen's week was $160. There were about 75 cattle in the sale. The average in the California sale, therefore, was under that at the sale at Spokane, Wash., February 22 and away below that realized at the Rochrock sale February 23.

NEW CHAMPION FOR MILK.

By producing a strong bull calf on February 16 E. E. Heg & Sons' Tyee Hiske Fayne completed her 305-day record of 25,213.4 pounds of milk and 888.48 pounds of butter as a junior 4-year-old and became world champion Holstein of all ages for

For Good Farming, Attractive Country Homes and Happy Country People

State Grange Seeks to Double Membership

Cooperation, Education and High Standard of Rural Life Are Among Its Fundamental Principles

By W. W. DEAL, Idaho State Grange Master

"I find the present executive officers of the state grange, with Mr. Fred Nelson of Seattle as leader, a strong body of successful, progressive farmers, and those who may be depended upon to do all that can be done to make Washington a leading agricultural state of the nation."

So declares W. W. Deal, state grange master of Idaho, in the accompanying article written especially for The Washington Farmer. Master Deal has been in this state for several weeks addressing grange meetings and advising with grange officials, both local and state. THE FARMER feels fortunate in securing from him the statement of grange principles and aims presented herewith.

The foundation of the grange was laid in the earlier history of our national development by O. H. Kelly, who visited the south atrequest of the secretary of agriculture to assist in reconstruction, at the close of the Civil war. He reported to the department of agriculture that the farmers should form themselves into groups, since in this way they could receive more benef it from the government in needed assistance. Mr. Kelly was called upon to draw up the ritual of the body that is now the grange. Later it was decided to make a few changes and among them was a clause that admitted women on an equal basis with men. This was one of the first movements in the direction of equality, which was later adopted as a national issue.

One of the most important principles upon which the grange stands is that of cooperation. We have never carried this out in such a way as to kill any existing business organizations, but rather with the view of promoting better interests among the rural population demanding a square deal from firms with whom we do business. We have always made it our policy to encourage and develop the spirit of working with each other and buying our goods in common whenever it is practical.

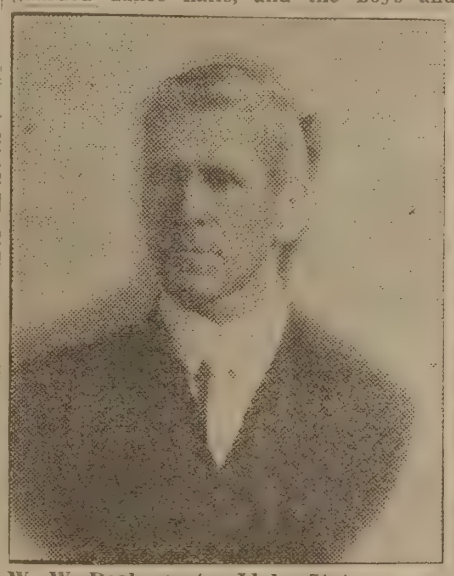
Stands for High Principles.

We should, however, look toward the higher principles for which the grange stands. Better ideals, better living and better citizenship. We believe that education will promote such ideals. A man with a good education is better able to deal intelligently with his associates and build up a happy home for his family.

It was through the helpof grangers that the rural free delivery service was established. There were many who could not see the value of the plan, but congress finally decided to give it a trial and it has now developed to such an extent that it serves about one-fourth of our population and has been the means of better cooperation, and more conveniences in our farm homes. By adopting a well planned legislative policy, we can secure even greater results in the future.

It was another long fight to get the idea of agricultural colleges and experiment stations started, but today they are recognized as a necessary part of our civilization. The grange has always been a strong advocate of better education for the young people of the farms in order to give them an opportunity to become useful citizens. It has stood for the development of high ideals and has continually emphasized the fact that brain power is more valuable than muscle.

Need Business in Farming.



The farmer of the future is the one who can operate his farm in accordance with business principles. The grange has foreseen such conditions for many years and has endeavored to get the younger generation to prepare for the problems that will comfront them. There is a "ball and chain" of ignorance attached to a large part of our population because of inadequate educational systems.

The financial side of an education is alone a big argument in its favor, and the salary of the average young man is usually in proportion to his education. The wage of the average man who has only received an eighth grade education is estimated at $600 a year. That of a man who has finished high school is approximately $1900 a year, while the average college graduate is getting from $2000 to $3000 a year.

The social side of the grange has always endeavored to make an appeal to the boys and girls. Many of our farmers are failing to make their boys and girls want to stay on the farm. There are too many that look toward the city as a better life. They want more leisure time, finer clothes and greater pleasures. The farm homes should be, and are becoming more attractive to all the family. The farm boys are showing a stronger desire to attend college and it means that our farms are being taken up by men that have a more thorough knowledge of the scientific principles of agriculture.

Ever since its organization, the grange had given a part of the regular meetings over to entertainment of some kind. It should be the duty of each lecturer to arrange the program so as to make it as interesting and attractive as possible with the talent available. Such a plan will not only help to keep the boys and girls interested in the meetings, but it will also make life more cheerful for the grown folks.

Many do not realize that the people of the farms have a greater social problem than do some of those who live in the cities. There is a great danger in the unguarded dance halls, and the boys and girls who are raised without an opportunity for a certain amount of amusement occasionally are more apt to be led astray. The social life of the grange can be made to serve a great purpose by asking every one to take some part in the entertainments.

W. W. Deal, master Idaho State grange.

Marketing Problems.

There is another phase of work that the grange is taking up—the marketing question. The farmer has never been able to set his own price for what he produces, but has been too willing to leave that to some one else. It behooves the producers to work together with a view of making the distance between the producer and the consumer as short as possible and thereby create a better price for their products and yet not keep it too high for the consumer.

The point was clearly brought out several years ago in my own case. We had just got settled on our little farm in southern Idaho. We had started to make butter and had some to spare, so I took a few pounds to the store where we traded. Before accepting the butter the merchant weighed each print carefully to see if they were full pounds. We had traded with him for many years, had never questioned his weights and measures and we had always paid our bills promptly. But just because we were now in the producing class our products must be watched more closely and the buyer must put his own price on it.

The incident made a deep impression on me and I made up my mind that I would do all in my power to set the farmer on a firmer foundation, where he could have more to say about the marketing of his products and not be branded as a cheat by those who buy from him. It was soon after this that I joined the grange and I have never lost an opportunity to make the farmers' place in the world a more pleasant one and I shall continue to do so as long as I am able.

The grange in Washington is growing rapidly, is more and more becoming a recognized force in the permanent upbuilding of the state and is the sane and safe advocate of things better for both producer and consumer. I find the present executive officers of the state grange, with Fred Nelson of Seattle as leader, a strong body of successful, progressive farmers, and those who may be depended upon to do all that can be done to make Washington a leading agricultural state of the nation. The program now is to double the Washington grange membership by 1925, and the advancement noted all along indicates it will easily reach this goal.

Home of Our First Governor

Will the People of Washington Allow It to Be Razed?

On the cover of this week's FARMER is a picture of the old home of Isaac I. Stevens, the first territorial governor of Washington, which stands on one of the most sightly spots in the capital city of Olympia. It is today in danger of being torn down to make room for a modern governor's mansion, for the land now belongs to the state and plans for its removal are said to be perfected. This old residence, rich as it is in historic interest, may thus be lost to the state and its citizens, for in these modern times history, tradition and romance have little chance against immediate needs or wants. The Margaret Hazard Stevens tent of Daughters of Veterans has started a movement to save by petition to state authorities this old landmark, and if that fails, then by private subscription to save it as a memorial house and museum. Other patriotic and pioneer societies have joined in the movement, but so far they seem to have made little headway with those who will probably formulate the policy which will save or wreck the building.

As stated, the old Governor Stevens home stands on one of the most enticing spots in the city of Olympia. On a slight elevation it overlooks the bay and has a fine view of the surrounding country. Governor Stevens built the house in 1856, or 66 years ago. He bought the land that year on account of its sightliness, and, while it was then in native forest of giant trees, thickly set, it must be said he chose well. The house is in a perfect state of preservation. In 1918 General Hazard Stevens, the governor's only son, had it entirely renovated. Its color is still white, as was the fashion in the old days. While it is not modern in its style of architecture, there are many newer buildings not as pleasing to the eye.

Governor Stevens was not only the first territorial governor of Washington. He was the head of the first surveying party for the Northern Pacific railway. He published reports that have been used as the foundation of reports on this country to this day. He was, also, before he was governor, superintendent of Indian affairs. In that capacity he made treaties with over 40,000 Indians, and those treaties still stand. They are recognized as fair to the Indians and safeguarding the interests of the United States in a farseeing manner. Indians came before the last legislature in full regalia and pleaded for fishing rights under one of these treaties. Their plea was, "Governor Stevens promised this."

Governor Stevens was appointed to the office at the head of territorial affairs in 1853. He served eight years. He had been governor three years when the house, then a model of architecture, was erected. It is on the opposite side of the open space of ground which lies in front of the new capitol building, now occupied by the governor and some of the other state officers.

The same year that he built the "mansion" Governor Stevens purchased 360 acres on the edge of what is now Olympia, but then quite out of town and covered with a dense forest of big fir trees and some cedar. General Hazard Stevens, the son, equipped and started it as a modern dairy in 1914, when he came out from the east.

This farm, with its modern, conveniently erected and arranged buildings, is today considered one of the models of southwest Washington. The herd is mainly grade Holsteins, with some Jerseys, but a purebred Holstein herd is now being built up. For a time the farm was owned by the Stevens heirs, General Hazard Stevens, Mrs. Eskridge and Mrs. Bates. Mr. and Mrs. Bates have acquired the interest of the other heirs and are retailing milk in Olympia.

The question of saving the house which commemorates the able man who was the first governor and had a greater part in shaping the early policies of the state is one that interests all the people of the state. The expense of preserving the house, either on its present site or somewhere else in a good location, would not be great. Is there sentiment enough in the state to save it?

Cooperation

Record of Six Years' Success

After six years of successful operation as a creamery and milk distributing plant the Port Angeles Cooperative creamery in western Washington is ready to equip a new plant which will consolidate both units and put them under one roof.

The history of the organization dates back to 1916, when O. T. McWhorter was county agent of Clallam and Jefferson counties and Ashur B. Hobson was at the head of the department of farm markets at the state college.

The original plant was purchased from the Glendale Creamery company by the members who levied a membership fee of $5 each and an assessment of $5 for every cow owned by each member. Notes were given by each member for his assessment valuation and used as collateral by one of the local banks which loaned enough money to make the payments. The entire payment was made, however, in a year's time from its purchase in 1916.

In addition to this the members have been getting a premium of 2 cents above the market price of butterfat instead of the cube price, which had formerly been necessary. The local market is now being supplied by the home plant. In other words, the dairymen are getting print butter prices instead of cube prices, since the plant went into the management of the new operators. The two plants are now capitalized for $5000.

During the last four months the 128 patrons have been bringing in an average of 350 gallons of milk daily and about 500 pounds of butterfat, or from 15,000 to 20,000 pounds a month. The milk is bottled, pasteurized and delivered to city customers and all sweet cream is sold on the same market. All sour cream, however, is made into butter and sold under the brand of "Angeles butter."

There is a small amount of outside butter used, but the home brand is used by the great majority of the townspeople and restaurants. A small placard is provided for each eating house which uses it, bearing the words, "We use Angeles butter exclusively." The same brand is used for ice cream.

"There is a good demand for creamery buttermilk," remarked George Usler, manager of the creamery and milk plant. "We charge only 10 cents a gallon for it, fresh from the churn, and so far there is no call for bottled buttermilk. We expect to put in some new equipment this spring and have a more sanitary plant. All improvements will be made from the present finances of the company and we will not have to go in debt."

The delivering of both milk and cream is all done by the members of the company, since it is more convenient to buy the milk, delivered at the creamery, at a specified price. Another reason for this is the fact that there are a few small producers in the county as yet. Those that do ship in small amounts can either deliver their own product or arrange with their neighbors to handle it for them.

The officers of the company are as follows: A. F. Eacrett, president; John Winters, secretary-treasurer: Frank Fisher, R. H. Kidd and William McFall, directors. George Usler is now acting as manager for both plants.

A Farmer on the Reserve Board?

President Harding permits a pretty wide play of individual opinion among the members of his cabinet, and the team work of his administration is probably not so good as it was in the administrations of Presidents Wilson and Roosevelt. For instance, widely differing opinions as to the need and desirability of pending legislation to put a "dirt farmer" on the federal reserve board were voiced last week before the house committee on banking and currency by Secretary of the Treasury Mellon and Secretary of Agriculure Wallace.

Secretary Mellon said that while he had no objection to the insertion in the present law of a provision that agriculture should be represented on the present board, he did object to the proposal to increase the membership from seven to eight.

On the other hand, Secretary Wallace said that he favored appointing to the board one man from each of the 12 federal reserve districts.

Representative Strong of the committee informed Secretary Mellon that there is a feeling of antagonism against the federal reserve board in the western sections where agriculture is the chief industry. Mr. Mellon replied that the conditions complained of are passing phases. The decline in commodity prices came naturally, he said, and there will be a natural recovery. He thought that the appointment of a so-called "dirt farmer" as a member of the federal reserve board would be of no advantage or benefit to agriculture. "If every member of the board was a dirt farmer," he said, "nothing more could be done for the agricultural needs than is being done now, because the members of the board have no latitude in the matter. You in congress will have to legislate to grant longer credits to agricultural regions." The secretary of the treasury thought that all the members of the board should have a general knowledge of trade, commerce, banking and agriculture.

Notwithstanding the belief of the secretary of the treasury, there is a widespread feeling among the farmers of this country that if there had been a "dirt farmer" on the federal reserve board when the country entered upon its ordeal of readjustment, agriculture would have been given a quicker hearing and more sympathetic consideration, with resulting benefit to the American people.

In the light of succeeding events and the testimony of authorities before committees of congress, THE FARMER still can see no reason to alter its opinion, repeatedly expressed in these columns, that the federal reserve board would have shown better judgment if it had put on the brakes earlier, and against the country's extravagance in non-essentials, instead of allowing the banks to permit increasing inflation and then, at a critical juncture, put the brakes abruptly on agriculture. The fact that the farmer, of necessity, has only one turnover a year, while merchants and manufacturers have several, should have led the banking system of the country to begin the deflating and readjustment process with non-essential industries that were turning out luxuries and extravagances, and to have set the screws last of all against the farmers.

Does This Mean Anything?

Figures compiled by the extension service of the state college show that the people of this state are consuming more than two and a half times as much pork and pork products as are being produced in the state at this time.

Corresponding figures show that there is a slightly greater consumption of beef than the amount produced in the state.

On the other hand, it is shown that the consumption of lamb and mutton is only about 60 per cent of the amount produced in the state.

These figures afford food for thought. In the case of hogs they mean that there is a wonderful opportunity for the farmers of this state to raise hogs and supply the local markets that are now supplied by hogs from the corn belt. This state should have pork and pork products to export. It is ridiculous that we should be importing pork into a state as ideally suited to hog production as is our own.

There are likewise great beef-producing possibilities in Washington. While the importation of beef, apparently, is small at the present time, there should be no importation at all, but, on the other hand, a healthy exportation. The beef cattle business can safely be developed to a much greater degree than at present.

The figures concerning lamb and mutton are especially interesting. One would naturally expect a large exportation of these products from a producing state, since sheep production on a large scale is less widely distributed than many other lines of production. But is there not a great opportunity here for the sheepmen to conduct a campaign of education among the people of our own state looking toward a greater local consumption than is shown by the figures? Increased consumption and not decreased production is the solution of the sheep problem.

Good Roads and Bekeeeping

No one would think that good roads could have anything to do with beekeeping. During 1921 there were 11,930 miles of roads constructed in the United States, under joint direction of the federal and state governments. There were 31,228 miles of roads projected, which more than equals the circumference of the earth.

The advantage of improved roads to beekeepers is that they often open up new territory where bees can be kept in out-apiaries. With the use of the automobile good roads make possible the location and conducting many more beeyards, and thus the production of honey is increased. So more good roads help to sweeten the public indirectly, or through the increase of the honey product, which, if it were not for keeping more bees, would only go to waste—evaporate.

G. W. Y.

Meat Imports

Interesting figures come to light in the report of the exports of meat and meat products during 1921 as compared with 1920. While the exports of 1921 showed an increase of 3 per cent in quantity the value decreased 36 per cent.

In 1921, 1,946,000,000 pounds were exported at a value of $297,155,000 as compared with 1,883,000.000 pounds in 1920 worth $463,000,000.

There was a great increase in the amount of lard shipped to other countries in 1921, also an increase of about 24 per cent in hams and shoulders, but decreased $3,000,000 in value.

Bacon exports decreased both in quantity and value. Exports of fresh beef during 1921 were the lightest since 1913.

State Farm News

Secretary Floyd Foster of the Tieton Waterusers' association says that he has received water right applications for all but two of the tracts purchased on the "school section" at the sale made about the first of the year and expects that the other purchasers will make application before the end of the 90 days specified in the contract of sale. This will bring an additional 370 acres under cultivation this year and all of the 32,000 acres on the Tieton project will have applied for water right. This does not mean that all of it will be in crop this year, but that every acre will be paying its proportionate share of the operation and maintenance charges. Not only will they be paying it for the coming irrigation season, but they will have paid up all back charges which have been accumulating against the land since operation began. These must be paid up in full before water is turned on new acreage.

* * *

Whatcom county's annual fair will be held the week of September 25. Whatcom has built up a reputation of having one of the best county fairs in the state, and no effort will be spared to maintain this record. C. B. Bay is secretary this year.

* * *

Three hundred berry growers attended the adjourned meeting of the Puyallup and Sumner Fruit Growers' association at Puyallup March 21. The growers unanimously adopted a resolution creating an advisory committee of six and limiting the membership in the association to those who delivered berries to the association during 1921. President Paulhamus considers the berry outlook for the coming season promising, he told the growers. Mr. Paulhamus announced that Seattle and Tacoma banks had promised to help finance the Puyallup and Sumner canning plants during the coming season.

* * *

Operation of the Younglove cannery at Sunnyside was begun a short time ago, and the plant is turning out between 300 and 400 cases of apples daily. The company expects to run a month or six weeks, because of the amount of apples in storage.

* * *

The Washington Farmer was pleased to receive recently a call from A. G. Woodward of Fairbanks, Whitman county. Mr. Fairbanks says that examination of the winter wheat fields in his vicinity shows the grain in fine condition. He says farmers in his section are coming back to the 50-50 plan of summer fallow. During the war they cropped larger proportions each year, but are getting back to what they believe the best normal condition.

* * *

Members of the farm bureau in the Colfax district pooled their orders for the purchase of 130,000 grain sacks at 8 3-4 cents.

* * *

W. M. Cox of Elma was reelected president of the Peninsula Bee Keepers' association at the annual meeting of that body, held at Puyallup. F. A. Ross of Puyallup, former president of the Pierce County Honey Producers' association, was chosen vice president; Miss H. A. Sater, Potlatch, secretary-treasurer, and Mrs. Earl Sprago, Puyallup, president of the Pierce County Honey Producers' association, assistant secretary.

* * *

The $30,000 school bond issue was carried by a vote of 123 to 42 at the special election at Endicott March 25. The funds will be used to erect a gymnasium and auditorium addition to the present school building.

* * *

Unique among warehouses in the Pacific northwest the new $200,000 addition to the Richey & Gilbert warehouse in Yakima, which will be completed this spring, will have space for 25 offices, where it is expected much of the fruit handling business of the "row" will be centralized. The addition will give the company 210 feet greater frontage on First avenue and will increase its cold storage capacity to 500 carloads.

* * *

Things are moving right along with the Zillah farm bureau, according to C. H. Furman, chairman. Out of 63 growers in the district 53 are members of the bureau. Orders for lime-sulphur spray in amount of 600 barrels have been pooled by the membership, the spray being delivered to the growers and the company sending trucks later to bring back the empty barrels.

* * *

The Port Angeles Commercial club has started a campaign to raise sufficient funds to operate the Clallam cannery this year. George Cross, cannery man of Utah, will manage the cannery if the present plans materialize.

* * *

An unprecedented bean pack will be put up by Whatcom county canneries this season. W. H. Pride & Co. of Bellingham are seeking contracts with growers for from 100 to 150 acres of Kentucky Wonder beans and will have 25 acres themselves. If they can get enough of that variety they will pack from 25,000 to 35,000 cases this year, says President C. K. McMillin.

* * *

The Washington Cooperative Egg and Poultry association has installed new processing machines in their Lynden and Bellingham plants. The machines are strictly modern and the only ones of their kind in the northwest. The process is a dip that seals the eggs for storage.

* * *

The Taranaki Holstein company of Benton county has recently imported from the John B. Irwin herd of Minneapolis Sir Ormsby Hengeweld Aakkanamer, a 7-month-old registered bull. This calf will be exhibited at the fairs this fall.

Coming Events of Interest

The following revised schedule of squirrel poisoning demonstration dates has been announced for Whitman county by the farm bureau and state college: Pine City, April 7; Colfax, April 8; Colton, April 10; Pullman, April 11; St. John, April 12; Steptoe, April 13; Endicott, April 14; Fairbanks, April 15; Garfield, April 17; Palouse, April 18; Oakesdale, April 19; Tekoa, April 20; Farmington, April 21; Thornton, April 24; Rosalia, April 27.

April 7—Northwest canners' meeting, Seattle.
April 15—All-Ag club show and sale, Pullman.
April 16—Easter.
April 18—Guernsey Sale, Fawndale Farm, Sunnyside.
April 24-29—"Be Kind to Animals" week.
May 4-6—Tulip festival, Bellingham.
May 12—National hospital day.
June 5—Northwest Guernsey breeders' sale, Portland.
June 20-22—Lincoln-Adams pioneer picnic, Keystone.
July 27-28—Whatcom co. Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

The Farmer's Business Outlook

Last week was not a period of unalloyed improvement in the farmer's business. Live stock and grain markets were unsettled and lost ground on the whole. The official figures upon exports of farm products in February were not entirely gratifying and the nose dive taken by the German mark to a new low record does not give a pleasant sensation.

But there is a side that can be polished up to look bright. Such periods of hesitation appear in all price movements and in spite of the decline farm products are selling enough higher than in December to make great improvement in the farmer's position. The advances which have already occurred have done much to lift out of the mire those who were not hopelessly embarrassed. One big bank with numerous Iowa correspondent banks, for example, reports that the latter owe it 40 per cent less than at this time last year.

The export trade in farm products in general is much better than expected a year ago and agriculture is in a better position in that respect than any other industry.

Industrial operations are gradually expanding. Although February is a short month, steel ingot production was the largest in 12 months, building contracts awarded were 7 per cent larger than in January and the greatest increase was in construction for business purposes. Gasoline production in January was the largest in eight months. Statistics upon total employment in manufactures show a 10 per cent increase compared with February a year ago.

The decline in German marks is the logical result of paper money inflation. The invariable history of such a financial policy has been that the depreciated currency is replaced by a new form of money on a sounder basis as soon as the old one nears the zero point in value. To that extent, the decline in German exchange is not distressing.

Consumers have been buying coal ahead in anticipation of trouble and stocks are sufficient to prevent any shortage for a month or two. The chief danger in the situation as far as farmers are concerned is the possibility that the strike may extend to other industries. There is a disposition on the part of both industrial and labor leaders to obtain a test of strength. Both sides appear to be determined, but there are a few signs that labor leaders are recognizing that labor can not retain its "wartime gains" when prices upon commodities have lost most of their advances during the war years. Farm products, in particular, have lost over 80 per cent of such gains.

Cattle and Hog Markets

Cattle values have been wabbling about more or less, without going far in either direction. Supply has been unevenly distributed and has been the chief cause of the uncertain trend. Although demand for beef is not entirely reliable, prices for dressed beef have not declined sharply.

Fat cows and heifers have fluctuated with steers, but they are seasonably scarce and prices mount whenever the supply shrinks. Cutters and canners also are scarce, as usual during the spring months, and are selling well. Packers report the canned meat trade as the best since the war. The decline in the veal calf market has practically run its course, but little or no lasting improvement in prices can be expected for another month.

For two months the flow of stocker and feeder cattle countryward from the 12 leading markets has held close to 50,000 head per week. The beginning of spring has not caused any marked increase, as prices are so high compared with fat steer values that strong inducement to take hold is lacking. Cheap grain rather than cheap, thin cattle, is the main attraction. Some fleshy steers are going out, but buyers of the opposite kind are assuming much less risk.

Although hog prices worked a little lower last week, the market has become more stable and a turning point may be near. Average weights have increased slightly, but receipts have declined according to schedule, the total for last week at the 20 leading markets being the smallest since early in October and considerably below the 10-year-average. Fresh pork prices declined a week ago, but are again back to the high point of the season. In spite of these conditions orders for eastern shipment have declined sharply. During December, January and February 41 per cent of receipts at Chicago were shipped out for slaughter elsewhere, but during the last two weeks less than 25 per cent of the limited arrivals have been taken by outside packers. Just why they hvae reduced their operations is not clear. Absence of competition from this source has given the larger packers the upper hand in the market and they have not been slow to take advantage. Shipping orders have been taking occasional spurts, but such increases have not continued long.

Even if meat consumption should decline slightly during the spring months there is little likelihood that stocks of hog meat and lard large enough to be burdensome later on can be accumulated. Cold storage holdings of frozen pork, dry sale pork and pickled pork on March 1 were only 545,000,000 pounds, compared with a six-year average of 831,000,000 pounds. Lard holdings amounted to 61,000,000 pounds, compared with an average of 103,000,000 pounds. The increase in meat holdings during February was only 6 per cent as large as the average increase during that month, while the increase in lard amounted to only 56,000 pounds, compared with an average increase of 10,500,000 pounds.

Since late last fall a deluge of reports have come forward indicating that hog production was being increased rapidly. In the last fe wweeks, however, reports of severe losses among spring pigs have been numerous. Inclement weather, excessive feeding of breeding stock upon corn and actual disease appear to be the principal causes. Fewer precautions have been taken than when hog prices were high. It is possible that these losses will prevent an excessive supply of hogs to be marketed next winter and spring.

Lambs Again at Sixteen Dollars

The lamb market again crossed the $16 line at Chicago last week. Receipts are maintaining about the same total from week to week, so that fluctuations in price have been small compared with the usual behavior of this market. Prices are already so high that they could easily tumble if the supply expanded temporarily, but the number of lambs still on feed is so small that a brief period of still greater scarcity may show up before the new crop begins to move. About 15,000 head of lambs are being taken out each week from the 12 leading markets for further feeding, but the period is becoming short in which this operation can be completed. With the market likely to become unstable at any time, purchases for this purpose are not especially attractive.

Although the demand for farm chunks is not up to the average for this season of the year, it is about as brisk as it is likely to be this spring. Late in April demand for horses of this character almost invariably tapers off. Prices are holding to about the same level. Bulk of the 1250 to 1550 pound chunks, sound and from 5 to 8 years old, are selling at a range of $130 to $185 at Chicago. Unsound stock is hard to dispose of, even at big concessions. A few choice heavy drafters are sold from time to time at $250 or higher. The extent to which trade has declined is shown by the fact that February receipts at all the leading markets were only 39 per cent of the five-year average for that month.

The finance committee in the United States senate has finally agreed upon a duty of 33 cents per scoured pound on wools, except those of carpet grade, which are to be duty free. The measure has some distance to go before final enactment, but it has a good chance to go through. The duty on scoured wool in the emergency tariff is 45 cents. The wool market has been relatively quiet. Activity of the woolen and worsted mills has slowed down about 10 per cent in the last three months, nevertheless, mills are obliged to buy raw wool and prices are practically unchanged. At the London auction of colonial wools values have been hardening steadily. The demand for cloth is slow and many mills are considering the necessity of reducing wages in order to cut costs of production.

Will Wheat Scarcity Arrive?

The wheat market has been fluctuating in a rather erratic manner, apparently waiting to determine whether actual scarcity will arrive before the new crop is ready. Statistical analyses continue to show a close adjustment of supply to demand for the rest of the crop year, both at home and abroad. This fact is neutralized, however,

by the existence of large commercial stocks in this country and by large stocks on passage to Europe. Supplies to these positions are so plentiful that buyers are indifferent and it is their failure to provide for distant requirements which is chiefly responsible for the market's behavior. Speculative sentiment, which has something to do with the course of the cash market, is disposed to the bearish side as long as these commercial stocks show no sign of rapid reduction.

Nevertheless, the situation contains numerous elements which are likely to restore an upward trend within the next few weeks. Primary receipts last week, although above the average for this season of the year, were the lightest in two months and 25 per cent less than a month ago. While the visible supply is larger than a year ago, it is about 20 per cent less than the 10-year average at this season and only twice in the last 10 years has it been smaller on April 1 than it is at present.

Mills report a dull flour demand most of the time. Nevertheless, they continue to operate on a considerably larger scale than a year ago. Stocns of flour decreased during February. They are believed to be light at the present time and distribution of flour into consumptive channels continues steadily.

Total world shipments of wheat have averaged from 14,000,000 to 17,000,000 bushels per week recently, while the world's disappearance of export wheat since the beginning of the crop year has averaged about 13,500,000 bushels per week. Stocks have not increased a great deal in European ports, but there has been a big increase in the quantity afloat. About 26,000,000 bushels of this wheat is being sent on consignment and if it arrives when the market is dull and is pressed for sale, it might have considerable effect temporarily. The large shipments are coming from Australia and the Argentine primarily and if continued until July 1 will practically clean up the surplus in those countries, making it necessary for Europe to draw upon the United States at the rate of around 12,000,000 bushels per week as soon as the new crop begins to move. It should be noted, also, that the total quantity on ocean passage is only equal to about five weeks' supply for Europe and that stocks on hand in importing countries are small.

Foreign financial conditions have some bearing on the situation, of course. Germany has been a big buyer recently for shipment from the new crop and was credited also with the purchase of a lot of distressed Argentine wheat on passage in nearby positions so that the decline in the value of the mark to a new low level received considerable attention in the grain trade.

With the coming of spring the wheat crop is showing up favorable in most sections. Some reports of damage are being made, however, and it will be a departure from practically all past history if a crop scare does not arrive later on. There are numerous reports of green bugs in Texas and Oklahoma, while some acreage has been plowed up in Kansas and adjacent states and a marked demand for oats to seed abandoned wheat acreage has appeared in certain parts of Kansas in the last few days. Foreign crop reports are mixed, but on the whole do not indicate an abundant harvest so far as Europe is concerned. Russia will not be an exporter next year if present signs are indicative, the Danubian countries have a small acreage and the condition of the French wheat crop is considerably below the average.

Corn and Oats

Both the domestic and the export demand for corn have subsided in the last few weeks, offsetting the decline in primary receipts, which are now the lightest since the last week in November. Corn industries are reducing their grind and the new Argentine crop will soon be ready for the export trade. Stocks at terminals are large and some of this corn, accumulated during the winter, is being pressed upon the market.

The oats market has been more or less laggard for months, but shows some signs of gaining strength. Primary receipts have dropped down to the smallest level since early in January, while primary shipments have increased and in the last 10 days actually exceeded arrivals by a substantial amount. Some normal surplus sections have disposed of their supply and are abliged to go outside to purchase seed. Export demand has broadened and clearances are running close to 1,000,000 bushels per week. Wet weather is delaying seeding operations in a wide area and it is possible that anxiety over the new crop may have some effect on the market before long.

Cash Grain Market

The range of cash grain prices for the week ending March 29 was:

CHICAGO—Wheat, No. 2 hard, $1.31 1-2@1.32 3-4. Corn, No. 2 mixed, 54 1-2@57 1-4c; No. 3, 53 1-2@56c; No. 4, 52 3-4@55c; No. 2 yellow, 55 1-4@58 3-4c; No. 3, 53 1-2@56 1-4c; No. 4, 52 3-4@55 1-2c; No. 2 white, 56@59 1-4c; No. 3, 53 1-2@58 1-4c; No. 4, 52 3-4@56c. Oats: No. 2, 36@38 3-4c; No. 3, 34 1-4@37 1-2c; No. 4, 33@35 1-4c. Rye, 99c@$1.02; barley, 53@69c.

Severe Break in Clover Seed

Red clover seed prices slumped sharply in the last few days as wet weather unexpectedly has curtailed demand. Alsike clover has declined during the last few weeks and timothy seed is about 10 per cent lower than at the high point of the season, although these seeds were not especially affected by the break in red clover. Demand for clover seed will subside within the next 30 days. During the latter part of April the market begins to ease off.

Toledo, per bushel—Prime red clover, $14.90; prime alsike, $11.70; prime timothy, $2.95

Chicago, per 100 lbs.—Clover, $15@25; timothy, $4.75@6.25.

The spring demand from hog producers for middlings has made a strong market on this product, but buyers are indifferent to other kinds. Wheat feed prices for later shipment are $1 to $2 below those for prompt shipment. Stocks of cottonseed cake and meal are larger than those of last year, but they are not being forced upon the market and prices are firm at the highest level of the year. The linseed meal market has weakened temporarily, due to liberal offerings out of second hands, especially at Buffalo. Production of corn feeds is heavy.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $24.75; standard middlings, $27.50; flour middlings, $31; cottonseed meal, 36 per cent, $48; 43 per cent, $52; hominy feed, $21; gluten feed, $2.65; old process oil meal, $55; tankage, $60.

Hay Markets Generally Firm

Light receipts are maintaining a firm hay market. At Kansas City, for example, receipts from January 1 to March 24 have been 5798 cars, compared with 8380 cars in the same period last year and 18,073 cars in the same period two years ago. Prices upon timothy and prairie hay are substantially lower than at this time last year, but alfalfa hay is higher. Ordinarily some new crop alfalfa hay is moved out of the far southwest by this time, but cold weather is delaying the first cutting this year and some observers predict that it will not be available until the latter part of May. As a result, Texas has been buying to a limited extent in northern markets.

Prices per ton in carlots—Chicago—No. 1 timothy, $22@24; No. 2, $19@20; No. 3, $16@18; No. 1 light clover mixed, $21@22; No. 1 clover, $17@20; No. 1 clover mixed, $18@20; No. 1 alfalfa, $15@26; upland prairie, $14@18; midland prairie, $12@15; rye straw, $15@16; oat and wheat straw, $12@14.50.

Eggs, Butter and Cheese

Although receipts of eggs are not as heavy as they were at this time last year, the movement into storage is fairly generous. Receipts at the four leading cities since January 1 total 3,226,479 cases, compared with 3,527,515 cases in the same period of last year. Cold storage holdings at these four points have increased to 232,778 cases, compared with 618,592 cases at the same time in 1921.

Cold storage holdings of frozen poultry in the United States on March 1 were 88,708,000 pounds. Stocks decreased nearly 15,000,000 pounds during February, compared with a decrease of only 2,000,000 pounds in the same month last year.

The butter market eased off rather sharply in the middle of last week, but developed strength later. The principal cause was an accumulation of fancy butter at eastern markets, especially New York. Consumptive demand continues broad and undergrades especially have been more popular than usual, but receipts are running above the average for this season of the year and an enormous quantity of storage butter is being put on the market. There is no speculative buying to absorb a surplus when it appears as lower prices are expected within the next 30 days. Stocks of cold storage butter at the four leading cities on March 27 were 7,407,645 pounds, compared with 10,871,462 pounds on the corresponding day last year.

"30-10" By RALPH W. SWETMAN

One of the most vital issues now before the people of this state is the so-called "30-10" school tax plan. This plan is being strongly urged throughout the state by its proponents and almost as strongly opposed by those who disapprove its provisions. Every voter should study it until thoroughly convinced either that it should be adopted or that it should be defeated when it comes before the people at the next election as an initiative bill. To aid the farmers of this state and their families to become familiar with the terms of this bill. The Washington Farmer will from time to time publish discussions of it from all points of view by persons qualified to speak. The article given herewith, which is the first of the series, is by Ralph W. Swetman of the normal school at Ellensburg, who is actively working in favor of the bill.—Editor.

Initiative measure No. 43 is entitled "An act providing for the current state school fund sufficient to produce $30 for each child of school age; for the distribution of state and county school funds to school districts upon the equal basis of attendance and teachers employed, and fixing the maximum annual tax levy of school districts, except for bonded indebtedness, at 1.7 per cent of the assessed value of the taxable property thereof."

The "30-10" is a step toward equalizing school taxes over the entire state. It is not a radical step, but in line with an evolution that has been going on in Washington for 25 years, beginning with the enactment of the "barefoot school boy law" in 1895, under the leadership of Governor Rogers. It is a professed desire of the people of Washington to do for all the children of the state what they would want done for their own children. It is a translation of the Golden Rule into a working educational program.

One of the two outstanding features of "30-10" is the transfer from local school districts to the state of a greater share of the responsibility for public school support. This is called the collection phase of the subject. Under "20-10" about one-third of the cost of education in the common schools is being borne by the state as a unit, while over one-half of the total budget is collected on the inequitable local district basis. "30-10" would increase state support of education to the extent of one-half of the budget and decrease the local districts' share to about one-third.

The second outstanding feature is the new method of distribution, which would apportion the state and county school funds to the local districts according to costs of education and would eliminate bonuses. This would insure rural districts obtaining a fairer share of state and county school funds than they now receive.

The aim of "30-10" is to collect money for school support wherever wealth is and distribute it where the children are.

COLLECTION.

The "30-10" means that there shall be collected into the state treasury $30 for every child of school age in the state. This is known as the state school fund. About $3 comes from the income from the permanent school fund and does not cost any one anything in taxes. The other $27 would come from taxation. At present $20 per child is collected on a state basis, $3 from the permanent school fund income and $17 from taxation.

The "10" means that there shall be collected into each county treasury $10 for each child of school age in the county. This is the present law. This money is known as the county school fund and is returned to the districts within the county.

After estimating the amount of money it will receive from the state school fund each school district by a local tax raises a sum of money which when added to its share of the state and county school funds will meet the needs of the children in the district.

That is, the local district meets the needs of its children if it is financially able. If the district is poor, then the children are denied the educational opportunities that are rightfully theirs. If education were a luxury no harm would be done. Each parent would buy for his children what he could afford. But education is a necessity. It is the very foundation of good citizenship and the nation itself. Any system of financing education on the "luxury" rather than a "necessity" basis is undemocratic and intolerable. Education is more than a family or local responsibility. It is a state responsibility.

The undemocratic obstacle to providing equal opportunities for all of our boys and girls is the collection of more than half of our school revenues on the small, unequal school district units of taxation. One district will have great wealth and few children to be educated, while another will have little wealth and many children. Consequently the last district even with heavy tax burdens can come nowhere near giving its children the advantages enjoyed by the children of the first district with light tax burdens.

"Thirty-ten" by collecting less money on the district plan and more on the state as a unit will equalize tax tax burdens and equalize advantage for the children. It would reduce the part of the total educational budget raised in the districts from 53 per cent to 37 per cent, while the part raised on the state basis would increase from 31 per cent to 47 per cent. The part raised by the counties would remain the same, 16 per cent.

EQUALIZATION THE ISSUE.

The equalizing effect of "30-10" may be shown by comparing the amounts of money paid into and drawn out of the state school fund by each district.

Rich districts pay to the fund more than they receive through apportionment, while poor districts receive more than they pay.

A survey of all the districts in the state is being conducted by the Washington Education association to show the exact effect of "30-10" on each separate district. The following illustrations are taken from one-room rural schools in Snohomish county:

District number.	Pupils in average daily attendance.	Assessed valuation of district.	District pays to state.	District receives from state.
33	18	$ 38,780	$ 336	$930
83	13	42,935	372	829
36	13	46,221	401	808
60	12	48,715	422	782
79	19	159,779	1385	928
90	18	175,660	1523	937
312	13	275,900	2392	803
67	13	448,107	3885	806

The apportionments from the state vary from $782 to $937, depending upon the combination of $530 on the basis of one teacher and the amount for attendance at 12 1-4 cents per day. Comparatively speaking these apportionments are nearly equal because the number of children in each district is about the same.

On the other hand, the amounts paid to the state fund by each district vary a great deal; from $336 to $3885. This is because the state tax levy is uniform. Consequently each district pays according to its wealth. The four poor districts receive more from the state than they pay, while the four rich districts pay more to the state than they receive. This is an excellent concrete illustration of "collecting money where wealth is and distributing it where the children are."

COMMON SCHOOL FUND.

The general fund operating the expenses (this does not include money raised from bonds) of the common schools of Washington is $24,000,000.

Collection on the present $20 per child basis:

State, 31 per cent	$ 7,519,120
39 counties, 16 per cent	3,759,560
2500 districts, 53 per cent	12,721,320
	$24,000,000

Collection on the proposed $30 per child basis:

State, 47 per cent	$11,278,680
39 counties, 16 per cent	3,759,560
2500 districts, 37 per cent	8,961,860
	$24,000,000

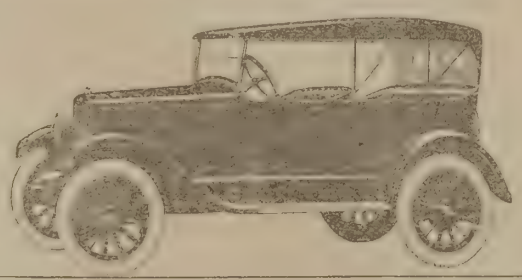
DISTRIBUTION.

Collect school revenues where wealth is

(Continued on page seventeen.)

Overland

now $550



f. o. b. Toledo

THIS new fame-making price clearly proves that the Overland is the greatest automobile value your dollars can buy.

It's a car so faithful, so powerful and enduring you can enjoy it for years. The all-steel chassis resists wear. Triplex Springs protect the car and cut down upkeep. The 27-brake h. p. motor travels more miles at less cost than any other car. Owners average 25 and more miles a gallon.

Overland, always a good investment—now the greatest Automobile Value in America.

WILLYS-OVERLAND *Inc.*, TOLEDO, OHIO

Touring Car, $550 · Roadster, $550 · Coupe, $850 · Sedan, $895

Men of the West!

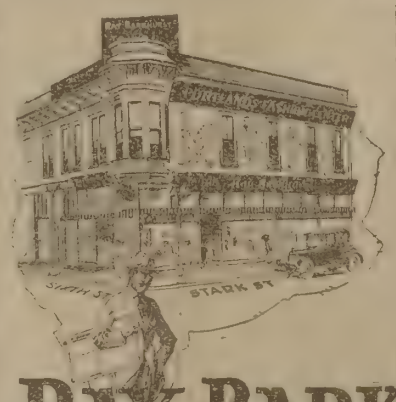
—why spend your money for eastern, factory-made clothes, when I can tailor better clothes of Western Virgin Wool cloth for the same price and LESS?

Let's keep our Western Tailors busy and all of us will prosper!

A Guaranteed Virgin Wool

SPRING SUIT

tailored to your own measure



$34

My guarantee to fit you and please you to your entire satisfaction—is your protection. My system of selling clothes by mail is just as satisfactory as though you bought here in person. Today, my customers are numbered in thousands throughout the northwest. Your suit will be strictly hand tailored and will give you longer service, look better and cost you LESS than a cheaply made factory suit.

FREE

Send for tape measure, self-measuring blank, style folder and cloth samples.

CLIP AND MAIL COUPON NOW.

Ray Barkhurst, (Dept. 2) Portland, Ore.
Largest custom tailor to men in the northwest.

Dear Sir: Please send me your FREE sample packet, including Virgin Wool cloth samples, self-measuring blank, style folder, tape measure, and instructions for ordering by mail.

Yours very truly,

Name .....

Address .....

Owing to the fact I carry the largest selection of woolens in the northwest, I want to send you exactly what you want. Give me a hint—mark (x) opposite the suggestions below.

( ) Western Virgin Wool Samples, assorted colors.
( ) Light and dark gray worsteds in stripes and colors.
( ) Black and white silk mixed worsteds.
( ) Blue serges.
( ) Overcoat samples.

RAY BARKHURST

Largest Tailor to Men in the Northwest

Portland, Oregon, Dept. (2).

Virgin wool cloth is made from 100 per cent pure, new wool and is absolutely free from cotton, shoddy and wool substitutes.

Stands for Full Cooperation

Fruit Growers Must Turn From Private Marketing Agencies to Cooperative Organizations

The Washington Farmer is greatly pleased to receive from a member of the Methow-Pateros Growers, Inc., a unit of the Skookum Packers' association, a vigorous letter touching upon what he aptly terms "the Skookum-Crutchfield mixup." To make clear to all of its readers the position it takes and the principles on which it stands THE FARMER publishes herewith the letter above referred to and a statement of its own attitude.

The Grower's Letter.

To the Editor of The Washington Farmer: I admire the way The Washington Farmer comes out in the open and states the facts in controversies affecting farmers. I do not, however, like the way you are treating the Skookum-Crutchfield mixup. I do not believe you have thoroughly investigated the whole deal. If you had, it seems to me that in line with your usual policy you would give the farmers the weight of your support, for it is the same old story of speculation against cooperation. You people appear to have sufficient nerve to tell the truth and a firm stand on your part would help us farmers in this deal at a time when we need help.

I am a member of the Methow-Pateros Growers, Inc. We own our own warehouse and packing equipment and elect our own officers. I. H. Logue, who is head of our local, is a real farmer and when I saw him yesterday was the color of an Indian from exposure to the sun while pruning his orchard.

We have a year-to-year contract with the Skookum Packers' association to handle our output. This contract may be canceled 60 days previous to May 1 each year without cause. Skookum Packers own the Skookum brand. Considering Mr. Crutchfield's promises which he made us last year, together with other things that do not look good to us, we refuse to sell through him this year.

Skookum Packers must sell to him because of its contract. Methow-Pateros growers and other units do not have to sell to Skookum Packers, however. Therefore, Mr. Crutchfield's contract with Skookum Packers is not of much value to him if the locals quit. We expect to ship one car through Skookum Packers so as to retain our interest in the brand, which we consider to be very valuable. The brand is our own. We originated it and we have paid the money to advertise it. We are not going to let loose of it without a rumpus. Neither are we going to market through Mr. Crutchfield after what has happened. We expect a long fight before we are clear of the woods. I am enclosing a bulletin from the packers' meeting March 18.

I am writing all this on my own initiative to endeavor to interest you sufficiently to look into the affair and give us any support you may see fit.

STANLEY T. ARNOLD.

Pateros, Wash.

The Position THE FARMER Takes.

The Washington Farmer has always given its support to cooperative production and marketing, and will continue to support that principle. It is in sympathy with the growers in "the Skookum-Crutchfield mixup." It believes that the fruit growers of the Pacific northwest made a grievous mistake when they allowed their former big cooperative marketing organization, the North Pacific Fruit Distributors, to be undermined by the Crutchfield interests. The Washington Farmer has no fight to make personally upon Mr. Crutchfield or his assistants. They have a right to come into this territory and to offer to market the fruit of individual growers or organizations of growers.

But the fruit industry of the Pacific northwest will not be on a firm footing until at least a majority of the commercial growers of fruit in this region turn definitely from private marketing agencies and handle their own marketing on the lines of the California cooperative marketing organizations.

It has been about 10 years since Mr. Crutchfield came into this field and persuaded many of the growers to abandon cooperative marketing and entrust their product to him. Other growers have dealt with other private marketing organizations. The result is that these various private marketing agencies are competing with each other in the eastern markets and using the products of one community to hammer down the prices received by all the fruit growers.

The remedy for that condition must be applied by the growers themselves. We have gone backard here in cooperative marketing in the last 10 or 12 years, and the same disappointing conditions will have to be registered 10 years from now, or 20 years from now, if existing methods of private marketing are continued.

These are the convictions of The Washington Farmer. First, last and all the time, it stands for full cooperation—cooperative marketing as well as cooperative production.

HOLSTEINS FOR FREEMAN CLUB.

The Freeman dairy club of Spokane county, organized through the efforts of County Club Agent W. J. Green is using Holsteins. Two of the boys purchased high grade cows costing $150 each, while a third paid $140 for a three-year-old. Mr. Green also reports that the Elk dairy club is pleased with the two registered Guernsey bulls which they purchased from A. L. Gile of Chinook. The Elk bank financed the purchase.

ALWAYS A CLUB BOOSTER.

I shall always be a booster for the pig clubs and better blood.

Mountain Beaver

Cause Much Damage to Crops

Mountain beavers are becoming very numerous in some sections of western Washington and have already caused much damage to crops. They are short, chubby little animals with short tails, which live in the underbrush of logged-over lands and seem to prefer to burrow into the hillsides.

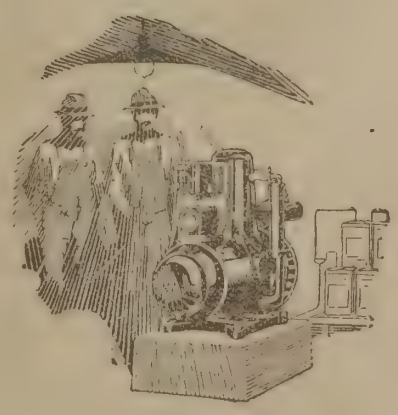
"They do their damage by eating the limbs from the young saplings and injure truck and berry crops," said L. K. Couch of the biological survey. "They will burrow under roads and cause them to cave in under heavy travel. As new land is cleared the beavers will recede, but will come out and feed from the newly planted area. Mountain beavers are most numerous on the Olympic peninsula, but are getting thick in other parts of western Washington.

"About the only redeeming feature they have is that they are very easily trapped," said Mr. Couch. "We have tried it out and found that one beaver was caught in the same trap more than a dozen times. A No. 1 steel trap has been found to be very successful and they will take almost any kind of bait, green vegetables, however, being preferred."

Protect Home Fats

Leaders of four national farm organizations met at Washington, D. C., recently and formulated plans to fight the so-called "soap lobbying." The organizations participating in the call are the National Milk Producers' federation, national grange, American Farm Bureau federation and the National Dairy union.

The farmers charge that the soap makers plan to discriminate against homegrown fats and oils in favor of soy beans, coconut and other vegetable oils produced by cheap labor of China, Japan, Manchuria, Ceylon, Java and India, if their plea to the senate finance committee for duty free vegetable oils is granted.



"This soap lobbying," said Charles W. Holman, executive secretary of the National Milk Producers' federation, "is the newest and wealthiest member of the National club. It has spent almost a year buttonholing our congressmen and instigating a flood of letters to senators from laundries all over the country. They have spent a small fortune in money.

"I am told that some have sent small gifts of soap to congressmen to demonstrate the virtues of their plan. This plan simply is to prosper themselves and the yellow and brown producers of these oils instead of the American farmer.

"America produces nearly 7,000,000,000 pounds of fats and oils annually and as the world's greatest reservoir for these products has heretofore dominated world markets. But if the orient is to be made the preferred source of supply then our farmers must stop producing so much corn and cotton seed, flax and hogs. There is a surplus already which needs to be taken care of before we stimulate the oriental industry."

And This is Only a Part of What Delco-Light Does"

BESIDES giving you more light, better light, and cheaper light than you have ever had before, Delco-Light will supply your farm with plenty of smooth, quiet electric power to do much of the work that must now be done by hand.

You will never have to pump water, for Delco-Light will furnish the power to provide water under pressure anywhere in the house or barn. It will furnish the power to run the separator, the churn, the washing machine, and will save you much of the time now used in doing chores. It makes farm life more attractive and increases farm profits.

There are twenty-five styles and sizes of Delco-Light, and one of them will exactly suit your requirements. All Delco-Light plants have the famous valve-in-head, air-cooled motor, thick-plate, long-lived Delco-Light batteries, and exclusive features that are combined only in Delco-Light plants, making them dependable, easy to operate, and economical.

We want to tell you more about the new, low Delco-Light prices and our easy-payment plan. If you have not had a recent estimate you will be surprised to see how little it will cost you today.

Just mail the coupon at the bottom of this page and we will send you the Delco-Light booklet and information as to the different plants, prices and terms.

Advertise the Northwest Apple

Growers of apples are asked to contribute 1 cent per box this season toward a fund to be expended for the advertising, far and near, of the northwestern apple.

At the horticultural convention in Spokane, Wash., last December, at which Oregon, Washington and Idaho producers were represented, a committee to work on the advertising of the northwestern apple was appointed as follows: Chairman, C. I. Lewis, Salem, Ore.; Charles Swigart, Yakima, Wash.; D. L. Oliver, Wenatchee, Wash.; P. J. Gray, Nampa, Idaho; A. W. Stone, Hood River, Ore., and Paul V. Weyrauch, Walla Walla, Wash.

The foregoing committee met at Portland last week and decided to inaugurate the advertising campaign so as to become effective for the 1922 crop.

"If the northwest will enter into a program of this kind enthusiastically a sufficient fund can be secured to conduct a creditable campaign," said a statement following the meeting. "It was voted to put this matter squarely up to each fruit section of the northwest, to ask them to have meetings to discuss the question, to elect local committees that can work with the general committee in putting this program across. From the various local committees, representative committees can be chosen to handle the details of the advertising campaign. It would probably be advisable to choose some efficient manager to conduct the campaign and work in conjunction with some advertising agency or agencies, as the growers might choose to handle this account."

The committee will meet again on April 17, when it is hoped that a sufficient report can be secured to determine whether or not the northwest will take the opportunity at this time to begin the comprehensive publicity campaign in behalf of the northwestern apple industry. If it is decided to go ahead the committee will then map out a tentative program which can be submitted to the fruit growers.

"We do not believe that we should discard our brand advertising," said the committee. "In fact, we would urge that more and more of that be done. Neither is the committee opposed to district advertising, but it believes that the Pacific northwest, as a unit, should conduct a campaign on the northwest boxed apple.

"The committee is asking for the support of every apple grower of the Pacific northwest. This is a northwest problem, not a local problem."

The attempt to secure unity of action on the part of fruit shippers of Washington, Oregon and Idaho was renewed on the day following the meeting of the publicity committee, this time by A. W. Stone, manager of the Hood River Apple Growers' association, who succeeded in getting together 20 representatives of private, corporate and cooperative shippers of the three states to discuss their common needs. A permanent organization was formed, with Mr. Stone as chairman and Dr. H. L. Geary of Underwood, Wash., as secretary, and another meeting will be held at Portland April 17.

Three propositions were presented for discussion by the Hood River man, who sought to unite the shippers only on those points on which there could be no serious difference. They were the cooperative buying of supplies in large quantities, the need of cold storage facilities on the docks at Portland and the necessity of a common terminal for rail and water shipments in large markets on the eastern seaboard.

Even on these seemingly fundamental matters difference of opinion existed. There was objection by some to blanket cooperative buying, because of a commendable desire to patronize local merchants in communities where the buyer operates, but it was conceded that it would effect a saving and possibly could be done without local reaction in the case of paper, box shocks, nails and spraying materials. A start in this direction probably will be made with paper. The prevailing sentiment in regard to cold storage facilities on the Portland docks seemed to be that their establishment would be a great convenience and that undoubtedly they would be used increasingly, but that the dock commission ought not to require advance guarantees of the amount of space shippers would require. Among the benefits of cold storage would be ability thereby to regulate boat shipments to the eastern seaboard and to Europe, and hence to prevent market gluts.

There appeared to be unanimity of opinion as to the need for common terminals in the east, but discussion at the meeting centered around the other matters. Represented at the gathering were the Underwood (Wash.) Fruit and Warehouse company, Yakima (Wash.) Fruit Growers' association, Spokane Valley (Wash.) Growers' union, Mosier (Ore.) Fruit Growers' association, Hood River (Ore.) Apple Growers' association, Oregon Apple company, Dan Wuille & Co. of Hood River, the agricultural committee of the Portland Chamber of Commerce and several individual fruit growers, including one from Nampa, Idaho.

VETERINARY

By DR. S. B. NELSON.

Iodine May Help.—We have a young cow, seemingly in good health, but just as soon as we begin to milk her she begins trying to urinate. Can this be cured?
Hartline, Wash. SUBSCRIBER.

Try giving your cow a teaspoonful of tincture of iodine in a little water once daily for a few days.

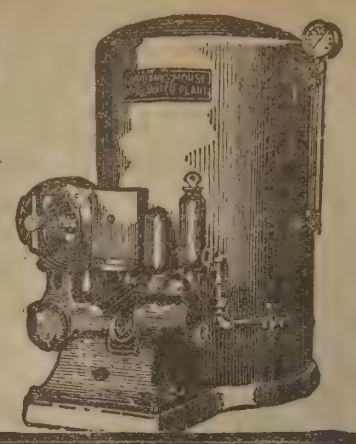
Hot Poultice.—I have a big work horse that hurt his knee in some way and it is swollen up to his body and he can not walk on it. C. E. S.
Portage, Wash.

It will be well if you can keep a hot poultice around the swollen leg for two or three days. That would help to relieve the soreness, and if it is due to an injury and pus is forming, it will hasten the formation of the pus, so that the place can be lanced to allow the escape of the pus and the wound washed out with any good disinfectant.

Abnormal Milk.—Is it injurious at all to use the milk from a cow that has two spoiled teats? N. B. M.
Bickleton, Wash.

If the cow is giving abnormal milk from the teats I would judge it not advisable to use the milk. If, however, the teats are spoiled and dried up, then I can not see any reason why the milk should not be used from the other two.

Hog Coughs.—I have a hog about 5 months old that is in good shape, but has had a terrible cough since a pig. Is there a remedy? W. F. W.
Arlington, Wash.



The cough is only a symptom of some specific trouble and since it is a symptom and I do not know what the touble is, I regret I can not give you a remedy for it.

Worms.—Can you tell me a remedy for worms in hogs? I butchered five last week and the two small ones had a great many white worms about six inches long in the small intestines. I have several more hogs that are not doing well and they must have worms. R. M.
Elma, Wash.

Use the following prescription for worms in hogs: Santonin, eight grains;

MINERALIZED WATER ROUTS CHICKEN LICE

Tablets Dropped Into Drinking Founts Banish Vermin, Make Fowls Grow Faster and Increase Egg Yield.

Any poultry raiser can easily rid his flock of lice and mites, make chickens grow faster and increase their egg yield by simply adding minerals to the fowls' drinking water. This does away with all bother, such as dusting, greasing, dipping and spraying. The necessary minerals can now be obtained in convenient tablets, known as Paratabs. Soon after the fowls drink the mineralized water, all lice

and mites leave them. The tablets also act as a tonic conditioner. The health of the fowls quickly improves, they grow faster and the egg yield frequently is doubled. Little chicks that drink freely of the water never will be bothered by mites or lice.

The method is especially recommended for raisers of purebred stock, as there is no risk of soiling the plumage. The tablets are warranted to impart no flavor or odor to the eggs and meat. This remarkable conditioner, egg tonic and lice remedy costs only a trifle and is sold under an absolute guarantee. The tablets are scientifically prepared, perfectly safe, and dissolve readily in water.

Any reader of this paper may try them without risk. The laboratories producing Paratabs are so confident of good results that to introduce them to every poultry raiser they offer two big $1 packages for only $1. Send no money, just your name and address—a card will do—to the Paratab Laboratories, Dept. S78, 1100 Coca Cola Bldg., Kansas City, Mo., and the two $1 packages, enough for 100 gallons of water, will be mailed. Pay the postman $1 and postage on delivery, and if you are not delighted with results in 10 days—if your chickens are not healthier, laying more eggs and entirely free from lice and mites—your money will be promptly refunded. Don't hesitate to accept this trial offer as you are fully protected by this guarantee.—Adv.

Unify Egg Selling

One Central Agency Is Established

As previously announced, the five commercial egg producers' associations of the Pacific coast have arranged to market their eggs through one central agency, which will be known as the Pacific Egg Producers' association. It will supplant the five different agencies which have been necessary heretofore.

The five associations, all of whom market their eggs and poultry on the New York market, are: The Poultry Producers of Central California, the Poultry Producers of Southern California, the Poultry Producers of San Diego, the Pacific Coaperative Poultry Producers of Oregon (with branches in Idaho) and the Washington Egg and Poultry association. The plan of the affiliation is to form pools of all eggs according to quality and sell them as the market demands, in order that each association may be able to receive the same price for the same quality of product. The agency will be formed and governed by trustees representing the associations, but incorporation papers will not be taken out. Other producing organizations working on a similar basis will be allowed to join the new organization. The term of the new agency shall extend through the main egg season, but it will allow each association to complete their present contracts.

All eggs of each association which are to be exported from their own particular territory shall be sold through the central agency. This, however, does not apply to markets in their own districts, since each association withholds the right to sell locally, any or all of the eggs that do not go to the eastern market.

As a matter of standardization, each association agrees to follow the standards established by the central agency which is expected to prove a great help in establishing the high quality egg on the eastern markets. As a check on the selling house, the egg sales will be made only upon the instruction of the trustees who represent the different associations.

How It Affects Washington Producers.

"As a matter of fact the new organization will not affect the Washington Egg and Poultry association this year," said H. E. Wills, secretary and general manager of the association. "We have contracts that will demand every egg we can get until next November. We feel, however, that the agency will be a great benefit to us after that time, as it will tend to stabilize the price and prevent any price cutting, such as has been the case with the agencies in the past. They have, in reality, been working much the same as separate producers and the buyers have been able to work one against another and obtain a better price. This can not be done under the new plan.

As for the possibility of the poultry business being overdone in the Pacific coast states, Mr. Wills stated that there were 1,500,000 more cases of eggs used in New Work last year than there were the year previous. He gives as the explanation that the people have responded to the higher quality of the pack and have been eating more eggs than they have ever done before.

"We are selling the egg that the market wants," he said. "The consumer gets a good egg with his ham for breakfast and he naturally comes back after more the next time. The grades are the main thing when it comes to selling eggs. We have never had a question about our eggs and we have never had a car turned down.

"There is also the increased population. The egg business should increase in proportion, but is making even better gains. The people are beginning to find out that good eggs are much cheaper than meat and they are taking advantage of the fact and are eating more of them."

Concentrate Powder Orders

Concentration of small retail orders into large wholesale ones reduced the actual cost of stumping powder to the consumer in Wisconsin 44 per cent, according to Dean H. L. Russell of the agricultural college of that state. He was discussing logged-off land operations in western Washington, and some one asked about the feasibility of a state powder factory. "Farmers want cheap powder, there is no doubt about that," he said, "but by concentrating orders you would save many times the amount of money that could be saved through state manufacture. Another way is to substitute 40 per cent powder for 50 or 60 per cent. We have made big savings in Wisconsin through both these methods."

OLD MOXEE COMPANY.

Alexander Graham Bell was one of the organizers and one of the largest stockholders in the old Moxee company, which is about to break up into 10-acre sale tracts its ranch near Yakima. Its big holdings formerly were used for stock-raising. Then they became one of the large hop ranches of the state, and recently the Utah-Idaho Sugar company has had them under lease. The death several years ago of H. B. Scudder, who was one of the incorporators in 1891, and more recently of George Kerr, hastened the sale of the property. Each was president at time of death.

KROYER BUILT

4-Wheel Drive Insures Greatest Traction Under All Conditions

WIZARD 4-PULL TRACTOR

The Wizard 4-Pull is the only tractor having a rigid 4-wheel drive. This delivery of power to all 4 wheels gives the Wizard all the traction of a track machine—and under some conditions more—but without prohibitive upkeep costs of track tractors.

Built to Last

After delivering normal pull, the Wizard 4-Pull has 35 per cent reserve power. It is built with over-strong parts throughout to support maximum performance. There isn't a single oil or grease cup on the Wizard—the only tractor that is automatically oiled throughout. A great time saver. Every working part except wheels and fans is enclosed and absolutely protected against dust and dirt.

The Wizard is the result of 30 years of experience and development by practical tractor men. It is a perfect tractor.

Keep These Two Points Clearly in Mind

(1) The tremendous traction of the Wizard.

(2) Its unequaled durability and low upkeep cost.

Inland Association Grows

Railsback Succeeds Newbery as Milk Producers' Manager

Following the recent resignation of A. A. Newbery as manager of the Inland Empire Dairy Producers' association, G. D. Railsback of Medical Lake, Wash., a member of the board of directors of the association, has been appointed to the vacancy. Charles Waggoner of Post Falls, Idaho, has retired as superintendent of the byproducts plant in Spokane, but will continue as a member of the executive committee. President H. S. Findley of Cheney, Wash., made the following statement regarding the resignations of Mr. Newbery and Mr. Waggoner:

"Mr. Newbery, on account of ill health, asked to be released at the annual election, but the directors declined to consider it. Afterward he renewed his request and the board accepted it March 7. Mr. Waggoner is retiring because of the illness of his wife and in order to give more time to his work on the farm. The board of directors is standing solidly behind Mr. Railsback, who succeeds Mr. Newbery as manager for the association."

That there is some criticism among the members of the association of the conduct of the association's affairs is indicated in the recent filing of a petition by 10 members asking that a meeting of the association be called to consider various phases of the association's management. The petition was submitted by H. J. Upham, a member of the association living on Peone prairie, near Spokane, who, with nine other members, signed it. The petition is understood to charge that the business conducted at the last annual meeting of the association was not done in accordance with the association's rules.

"The books of the association are open to its members at all times, said G. D. Railsback, the new manager, commenting upon the filing of the petition. "We will call another general meeting of the stockholders whenever a proper petition is presented, and are sending the other petition back with the request that it be properly dated.

"The affairs of the association are in good shape and we are rapidly getting on our feet. While we have a lot of milk now coming in, between 6000 and 7000 gallons a day, we are not requiring members to accept a reduced price for their surplus of milk, as we had to do a year ago at this time."

The Inland Empire Dairy association has increased its membership by over 100 per cent since it was determined, about 10 months ago, to put a byproducts plant into operation in Spokane with a view to exercising a degree of control over the marketing of the association's product. It now has a membership of more than 700 producers of milk in the territory of eastern Washington and northern Idaho tributary to Spokane.

Following the opening of the byproducts plant last August the association cut the price of retail milk from 13 cents a quart to 12 cents and later from 12 cents to 10 cents. All the private distributing companies serving the city met this reduction for several months, during which several attempts were made between the producers' association and the distributing companies to agree upon a higher price for retail milk and a fixed price at which the private companies would purchase practically all of their milk supply from the producers' association. This agreement was not reached until a few weeks ago, when all but one of the large distributing companies agreed to purchase milk from the association's plant at a price of $2.85 per hundred net for milk testing 3.8 per cent butterfat. This was considered a marked victory for the producers' association. Following this agreement the retail price of milk was returned to the original figure of 13 cents per quart. This price is being paid at the present time by most of the consumers in the city of Spokane, though a number of small independent distributing companies are retailing milk at from 10 to 11 cents a quart.

CAN HAVE IRRIGATION WATER.

L. M. Holt, supervising engineer for the Wapato project on the Yakima reservation, announces that he has received from Charles H. Burke, Indian commissioner, a ruling to the effect that he would not be compelled to withhold water from the lands of settlers who have not yet been able to pay their construction charges. In case of such settlers, the Indian service is to have a first lien on their crop to assure payment of delinquent charges. The ruling is a step in a series of differences between the project residents and the authorities, as the farmers claim in some instances that they are unable to pay the construction charges of $5 an acre at this time. They were threatened with not getting any water for the season's crops.

The Piston Ring

Wherever power is produced by pressure exerted on a moving piston, whatever the type of engine, motor or compressor, its effectiveness is largely determined by the piston rings.

Upon the piston rings depends whether all of the force that is put into the cylinder (gasoline in the case of automobile motors, steam in steam engines, air in air compressors, etc.) is used to create power, or whether part of it escapes and is wasted. Upon the piston rings also depends control of cylinder lubrication; whether or not more oil than is needed to properly lubricate works up the cylinder walls to form carbon and, in gasoline engines, to foul spark plugs and make smoke.

All pistons are necessarily made slightly smaller than the cylinders in which they operate. They must be enough smaller so that when they become heated in service they will not bind in the cylinder.

Piston rings are light, springy bands of iron that are fitted into groves in the piston. It is their function to close and guard this space between the piston and cylinder; to spring out against the cylinder wall with a definite, firm contact, equal at all points of their circle, so that there can be no escape between piston and cylinder wall for the power that drives the piston. So that no excess lubricating oil can creep up the cylinder walls to make trouble. Upon the equality of their tension against the cylinder wall at all points depends not only the maintaining of compression and restraining of excess oil, but also maintainance of round and true cylinders. Rings of imperfect tension, that bear more heavily at one point than another, mean unequal wear on the cylinder walls and out-of-round cylinders eventually.

Each ring should form a complete and concentric circle in perfect adjustment and conformity to the bore of the cylinder.

Not only is there waste of power where poorly fitting or worn rings permit gas to escape past them, but their gas condenses in the lower part of the cylinder, working then down into the crank case, where it mixes with the lubricating oil. Gasoline is not a lubricant. It deteriorates the lubricating oil and the result is unnecessary wear in the motor because of ineffective lubricant.

Equal tension—uniform pressure outward from the ring's center against the cylinder wall at every point of its circumference, is the basic requirement for a piston ring properly designed and made to develop and maintain maximum compression and maximum fuel economy.

Wider Irrigation Policy

Development of the state's policy of reclamation and land settlement to the "ultimate end that all available irrigable lands of the state may be intensively cultivated," and indorsement of the Smith-McNary bill were embodied in resolutions passed by the state chamber of commerce at its session in Olympia.

N. B. Coffman of Chehalis was elected president for the coming year; Colonel Paul Weyrauch of Walla Walla, vice president for the east side of the state; State Treasurer C. L. Babcock of Olympia, vice president for the West Side; F. D. Case of Wenatchee, treasurer.

ELIAS W. KIRKLAND.—Shelton, Wash. —I need no urging to renew my subscription to The Washington Farmer. I want to thank you for the interest you are taking. I can well afford to take such a paper.

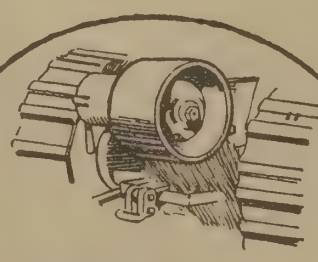
long-life

a built-in quality of



Finest qualities of steel and extremely exacting standards of manufacture contribute to the rugged strength and unmatched endurance of "Caterpillar" T-35 Tractor.

Highest grade materials are used—nickel steel, chrome nickel steel, chrome vanadium steel, saw steel—there is not a carbon steel gear or shaft in the entire tractor. All bearings—except, of course, in the motor—are anti-friction: ball, roller or tapered roller. Perfect lubrication and complete enclosure from dust and dirt further insure long life.

Many of the first "Caterpillar" Tractors built are still doing daily duty. Model T-35 possesses, in a highly developed degree, the same qualities that have made that record possible. That means that it will do your work dependably and economically. A Pacific Coast factory and service organization mean that you get real service—quickly. Write at once for complete catalog.

For Belt Jobs

The belt pulley unit gives the T-35 Tractor a vast field of usefulness for stationary work in addition to the innumerable tractive jobs it will handle. With it you can pump, grind, saw and do other belt jobs easily and quickly. The belt pulley operates at 3,000 feet per minute belt speed.

There's only one Caterpillar Holt builds it

Sanitary Farm Water Supply

New Utility Room Is Figured Out for Modern Farm Home

A good water supply, a complete sewage disposal plant, and effective heating and lighting systems constitute the four prime utilities of the farm home, the foundations of safe, comfortable living, says George M. Warren in Farmers' Bulletin 941 of the United States department of agriculture, "Water Systems for Farm Homes." To secure these ends in greatest measure, thought and planning are necessary. If the procedure is haphazard, if the parts are not correlated, there is neither economy in the construction nor satisfaction in the operation of the plant. To illustrate: When locating the well, the direction of surface and underground drainage should be considered, to the end that the water supply may not be contaminated by the sink drain, cesspool, or other sources of filth. The unused water from a spring or flowing well may be made valuable if brought to a watering trough, cooling tank, fish pond, or swimming pool, or harvested as ice. A saving may be effected by laying two lines of pipe in one trench. The engine which drives the pump may operate other useful appliances, such as a dynamo, saw, washing machine, cream separator, or churn. The accompanying cut suggests a utility room built as an addition to a farmhouse having few improvements and no cellar. Attention is directed to the convenience of a laundry and a lavatory and a warm, dry room just off the main part of the house where farm hands can wash, and in stormy weather deposit their wet coats, boots and shoes. A notable example of home-planning utilities is found upon a farm in northern Utah. By personnal planning and hard work the owner of this farm gradually has equipped his house with a pressure water system, a laundry containing a power washing machine, wringer, mangle, and drying machine, a heating plant, electric lights, electric range, electric heaters for emergency use in chambers, and a vacuum cleaning system.

Observation indicates that on the average three out of four farm wells are located within 75 feet of the back door of the house and in the direction of the barn. That convenience and first cost—not safety—have been the deciding factors in the thousands of such locations is a fact made evident by the proximity of barnyards, pig pens, pastures, fertilized fields, sink drains, privies, cesspools, and house yards rendered insanitary by chickens, slops, garbage, and other filth. Too frequently the leach from these or other sources of filth, after joining the ground water, moves with greater or less directness to wells and springs, seriously impairing the water supply by organic impurity or grossly poisoning it with human sewage.

Among other ways by which surface waters and open or poorly covered wells and springs are contaminated or receive noxious substances are: Surface wash from roads, ranges, or the other sources of filth above-mentioned; bodily entry of stock and poultry or their droppings; filth from the shoes of careless farm hands and children; drippings from the dipper or bucket handled by carriers of diseas; dust and leaves from the air; and entry of worms, bugs, spiders, toads, frogs, mice, snakes, cats or other animal life, which through death and decomposition may impart to the water disagreeable odor and taste and perhaps more serious characteristics.

Lambs Make Big Gain

Ernest Wilson of Ellensburg, Wash., reports that four of his purebred Hampshire lambs averaged 59.8 pounds in weight at an average age of 58 days (March 9), the heaviest ram lamb weighing 73 pounds at 65 days. Ernest says he has a 140 per cent lamb crop saved to date on his own ewes and 130 per cent on the imported Hampshire ewes which he is leasing from Robert Blastock of Filer, Idaho. The lambs are consuming somewhat over 25 pounds of grain mixture daily fed them in their lamb creep.

These lambs are all sired by a very choice imported ram brought over by Bob Blastock three years ago.

Home Grounds

Beautiful home grounds are an asset to any farm and will not only make the home life more attractive, but will often add to the value of the property.

"Convenience is one of the first considerations to emphasize when planning the home grounds," said A. M. Doerner, landscape architect of the state college, while giving a series of lectures to the community farm bureaus in King county. "The proper arrangement of buildings, fences and gates will help to lighten the daily tasks about the house and barnyard and will also make a great difference in the looks of the place.

"When planting shrubs or flowers arrange them so they will be at the border or next to the buildings in order to give the lawn a more even appearance. A flower bed in the center of a lawn makes it inconvenient when mowing. Flowers along the border are not so noticeable after dying down in the winter. The dead leaves will cover the ground and if necessary the beds can be left until spring, whereas if they were in a more conspicuous place they would need attention.

"The decorative effect of shrubs next to a building or along a fence serves to blend the colors of the house and the lawn. Almost any kind of shrubs can be used to advantage if properly placed. If one thinks of his place as a picture and plants his tall trees so that they will give the effect of the frame on a picture he will get better results than if he plants the shrubs promiscuously. It is a common custom to get the shrub first and then look for a place to plant it. We are working for an improvement in effect, and should have the plan in mind before beginning to plant.

"It is not necessary to purchase expensive shrubs in order to have a beautiful house yard. Nursery shrubs are good when one can afford them, but one can often find native shrubs that can be worked in to great advantage. It is often advisable to buy young shrubs, plant them where they will be most effective, and wait for them to grow. Such shrubs increase in value as they increase in size, and one may secure several valuable young shrubs for the price of one large one. It is much better to start in this way than to put off beautifying the grounds until one is able to buy mature shrubs.

In answer to a question as to whether a lawn should be planted when no one has time to attend to it, Mr. Doerner explained that it is better to have a lawn and mow it once or twice with a team rather than to have a bare yard where weeds are sure to grow. In many cases sheep can be used to keep the grass down and it makes a neater appearance than tall grass or none at all. A small lawn well cared for is better than a large one that is allowed to run down. It is also easier to take care of a good lawn than one that is choppy or cut up with flower beds.

Willard Standards of Service Are Your Protection

Every Willard Battery Station is conducted according to definite Standards of Service. These are as follows:

1 To render our very best service with equal interest and skill to all motorists and on all makes of batteries without reservation or distinction.

2 To maintain such location, equipment, and personnel facilities as will permit each station to offer a complete inspection and advisory, filling, repair, rental and replacement service, in keeping with the needs of the locality in which it is established.

3 To maintain repairmen of broad experience, judgment, and mechanical and electrical ability, upon whom owners of all makes of batteries can depend for accurate reports and sound advice as to the condition of their batteries, as well as expert repair service when needed.

4 To remember that good-will is the most precious of commercial assets to each one of us; and that the battery owner who comes in for testing and water is as welcome and as fully entitled to prompt, cheerful, expert service as the owner who is in need of work that creates revenue.

5 To manifest at all times, and to all visitors and customers, the same courtesy, interest, helpfulness, and good-will that we would like to receive if the position were reversed.

LIVESTOCK AND DAIRY

Dairying Without Pasture

By E. G. Woodward.

Dairying is not generally practiced where pasture is not available, except in the immediate vicinity of large cities where the demand for market milk is very good. This does not mean, however, that dairying in some outlying districts is impracticable, even though pasture is not available.

Pasture is considered a perfect food for the dairy cow; whereas dry feeding, no matter how scientifically followed, may in the long run lead to unsatisfactory results. In other words, pasture for a few months during the year serves as a safeguard against improper feeding during the remaining portion of the year when the cow is on dry feed.

I would suggest that where there is no pasture available, but alfalfa is grown, the cow be fed at least a part of the summer on green alfalfa direct from the field. Where alfalfa is used as a soiling crop in this way it will answer the purpose of pasture. In winter silage or roots in the ration will do much to maintain the herd in proper condition.

Epidemic of Rabies

Referring to a dispatch from Washington, D. C., that an outbreak of rabies is raging in eastern Washington, Dr. Paul H. Turner, state director of health, says that this epidemic has been "pretty well brought under control."

"There was some alarm," Dr. Turner said, "when it was recently reported that rabid coyotes had crossed the Columbia river eastward into Whitman county. Hunters are rapidly slaughtering the coyotes, however, and there seems to be little danger of the epidemic's spreading."

During the six months, he said, three persons were bitten by rabid animals, but they were given the Pasteur treatment promptly and there were no deaths. The state directors of health and agriculture are working with the federal department of agriculture to stamp out the epidemic.

TWO BIG SHOWS.

September 25 to October 1, 1922, are the dates of the 13th annual Dairy Cattle congress at Waterloo, Iowa, the show's permanent home. The management reports that arrangements for this year's show are being made under very encouraging conditions.

During the same week the fourth annual International Belgian horse show will be held at Waterloo. This exposition is unique in that it is the only single breed horse show held in America. Last year there were more than 250 Belgian horses exhibited.

Did This Change Pay?

In a certain herd there were 12 common grade cows and one inferior grade bull. These cows averaged to produce about 3200 pounds of milk a year. The bull was finally disposed of and in his place was used a good, purebred dairy bull. His seven daughters, during their first year of milk production, averaged practically 5600 pounds each. This was an increase of 2400 pounds from each of the seven, or 16,800 pounds, for the year over their dams. Figuring this milk at $2.50 per 100 pounds we find the increased value of the milk worth $420.

The Feed of a Champion

Here is a statement of the feeding of Beauty of Chicona, the 4-year-old Guernsey cow in the herd of A. L. Gile, Chinook, Wash., that recently became state champion in her class by producing 13,563.7 pounds of milk with 742.69 pounds of butterfat:

Dec.—16 lbs. daily of the following mixture: 300 lbs. each corn meal and ground barley, 200 lbs. ground oats, 50 lbs. each cottonseed meal and soy bean meal, 35 lbs, roots, silage, 10 lbs. mixed hay.

Jan.—18 lbs. daily same mixture as December; 3 lbs. beet pulp, 25 lbs. silage, 10 lbs. mixed hay.

Feb.—Same ration as given in January.

Mar.—15 lbs. daily same mixture as December; 1 pt. molasses, 3 lbs. beet pulp, 25 lbs. silage, 10 lbs. mixed hay.

Apr.—Same grain ration as March; 3 lbs. beet pulp, 15 lbs. turnips, 20 lbs. alfalfa.

May—Same grain ration as March; 3 lbs. beet pulp, 15 lbs. roots, 20 lbs. alfalfa to the 16th, pasture.

June—14 lbs. daily same mixture as December, pasture.

July—12 lbs. daily same mixture as December, pasture.

Aug.—11 lbs. daily same mixture as December, pasture.

Sept.—11 lbs. daily of the following mixture: 100 lbs. bran, 300 lbs. corn meal, 200 lbs. each ground oats and ground barley, 50 lbs. each cottonseed meal and oil meal, 1 pt. molasses, 3 lbs. beet pulp to the 15th, pasture.

Oct.—9 lbs. daily of the following mixture: 100 lbs. bran, 200 lbs. each corn meal, ground oats and ground barley, 50 lbs. each cottonseed meal and oil meal, 1 pt. molasses, 3 lbs. beet pulp, 20 lbs. roots to the 15th, pasture.

Nov.—7 lbs. daily same mixture as October, except soy bean meal in place of oil meal, 1 pt. molasses, 3 lbs. beet pulp, 20 lbs. each roots and mixed hay.

Wool Under U. S. Warehouse Act

The United States bureau of markets is convinced that thousands of woolgrowers have been benfited by the United States warehouse act. In fact, during the last year, about one-sixth of all the wool produced in this country was handled by warehouse men operating under the United States warehouse act.

Many of these growers shipped their wool from the farm or ranch to a licensed warehouse in a marketing center. Others gathered their wool by pools and stored it in a local licensed warehouse to be made up into car lots and then sent to a concentrated center or place of sale.

In the first method the warehouse receipt is the same after your wool is stored at the marketing center.

In the second plan a bonded warehouse receipt for ungraded wool is issued as soon as it is stored in the local licensed warehouse. By this means an opportunity is given of being financed continuously from the time the receipt is taken to the bank until the wool is sold at the concentration or marketing center.

Growers who have had experience under this act know that their wool is generally safer when placed in a warehouse licensed by the federal government and that it is properly handled because of the government inspection and supervision. From the grading of the wool on a commercial basis in such warehouses, valuable information is obtained concerning the wool the grower is producing, which frequently indicates how the wool and the flocks or band may be improved to produce the most profitable quality.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Aermotor Towers are Towers of Strength

Imported Mowing Blades

Raise Beef on Wheat Farms

By C. M. HUBBARD, Live Stock Extension Especialist, W. S. C.

Wheat farmers of the Palouse section are again turning toward more live stock. A careful perusal of the sale lists of Shorthorns sold in February by Day & Rothrock at their Sprague ranch and the Shorthorn consignment sale at Spokane the previous day shows that 58.9 per cent of the Shorthorns sold were purchased by Whitman and Columbia county farmers and ranchers. Nine of the 16 bulls and 24 of the 28 females sold by Rothrock were purchased by buyers from Whitman and Columbia counties; 6 out of 15 bulls and 7 out of 19 females in the consignment sale were shipped to Whitman county.

These purchases indicate that the beef cattlemen of this section are founding new herds or are building up their present herds in order to take advantage of a reviving interest along cattle lines, because they realize that with cheaper concentrates and roughages, with a lower price for wheat, history will repeat itself and good cattle will again pay dividends and be in demand.

As time passes, the fields of the Palouse are being seeded to an increasing amount of alfalfa, sweet clover and field peas; this from the standpoint of increasing the humus content of the soil in order to prevent the ever increasing amount of soil eroson, and also in order to maintain fertility and to furnish a certain amount of pasture for live stock. Peas and corn are finding a larger field of usefulness on land formerly allowed to lie fallow, it being found more profitable than allowing the land to remain idle.

Thus a larger amount of roughage and an increasing acreage of legume pasture become available from year to year. The proper utilization of these feeds calls for a certain amount of cattle to fatten for market, for a certain number of grade herds to furnish at least a part of these cattle, and, in turn, for purebred herds to furnish high-class sires for use on the grade herds.

Consequently, in the purchase of high-class herd bulls, bred females and heifers at the recent sales, a determination is shown on the part of leading Palouse farmers to make their best cattle better, to increase the size of their herds, and prepare for a greater general interest in beef cattle in order to supply a larger demand for meritorious sires.

The above are the Shorthorn steers with which the State College of Washington won first and second and grand championship over all breeds at the 1920 Western Royal Live Stock show. The college also won the Shornhorn championship at both the Western Royal and the Pacific International last November.

MORE WHEAT; LESS MONEY.

Notwithstanding the fact that there were nearly 50,000,000 bushels more wheat and wheat products exported during the year 1921 than during the year 1920, the value of the exports of 1920 was more than $160,000,000 greater than that of 1921.

Farmers Live Stock Committee

The Producers' Live Stock Commission association opened for business at the national stockyards, East St. Louis, Ill., January 2. At the close of its eighth week it reports doing more business than any of the other 55 commission firms in that market. The association is the outgrowth of the cooperative marketing plan of the Farmers' live stock marketing committee of 15, appointed by President J. R. Howard of the American Farm Bureau federation.

The company doing business at East St. Louis is one of the chain of farmer owned and controlled live stock commission houses which will be joined together by the National Live Stock Producers' association.

Contrary to what usually happens, the new producers' company not only paid expenses the first week, but was able to put a sizable percentage of the commission collected into its earnings account. The second week it was able to put four times as much into its earnings account and it has increased correspondingly ever since.

As the company operates on a cost basis all earnings will be prorated back to the members. Prices which its members have received for their stock are said to have reached higher than the average that the packers have paid.

"We have repeatedly topped the market in all departments," says H. E. Fike. "We not only get new customers every day, but what is more important, we are getting the prices and our old customers are staying with us. The large packers are buying from us on the same basis as they buy from other commission firms."

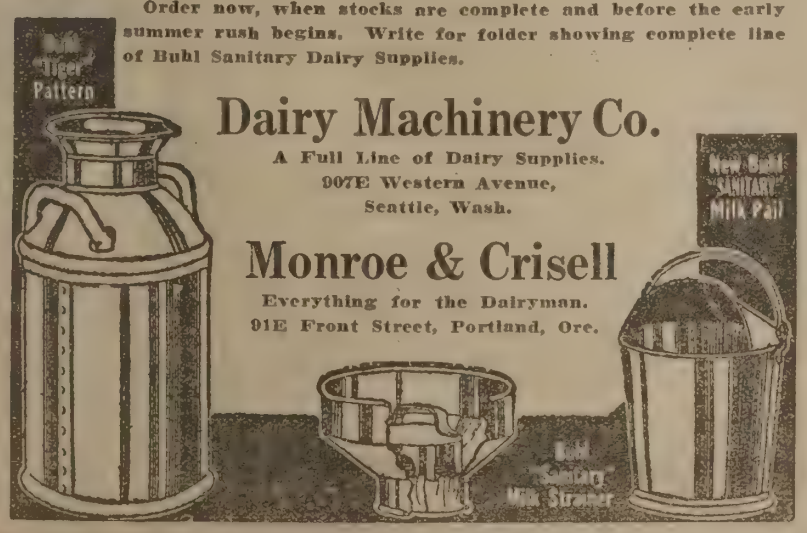
A movement is already on foot to organize a producers' live stock cooperative marketing association on the Buffalo market.

President John D. Brown of the general association says that there is no question but that the cooperative commission companies can hire men of as good quality as can the old line firms. The majority of persons connected with the commission firms are on a salary basis and are willing to work where they can get the most money and where their opportunities are the greatest; in fact, "since we have started operations we have had scores of applications not only from paid employees, but even the owners of many old line commission firms have offered to sell to us and go to work for us."

Plans are made for opening offices in Chicago, Indianapolis, Buffalo, Pittsburgh, Cleveland, Cincinnati, Toledo and Detroit. According to President Brown, within 12 months companies of the National Live Stock Producers' association "should be operating in at least 12 markets. If conditions warrant and local stockmen demand it, an office will be established in any live stock market. The plan under which we work has the support of national and state agricultural and live stock organizations of the various county and state farm bureaus and of the American Farm Bureau federation."

Mr. Brown adds: "Every one connected with the marketing of live stock realizes the need for a better regulation of the flow of cattle, hogs and sheep for market and nothing short of a farmers' marketing organization working along national lines will ever be able to get results.

"The cooperative marketing plan of the National Live Stock Producers' association is built from the ground up. The individual live stock producers of the nation constitute the foundation. The producer is urged to join the local cooperative live stock shipping association. If he does not do so, however, he may still avail himself of the selling-at-cost features by shipping his stock direct to the farmer owned and controlled commission company."

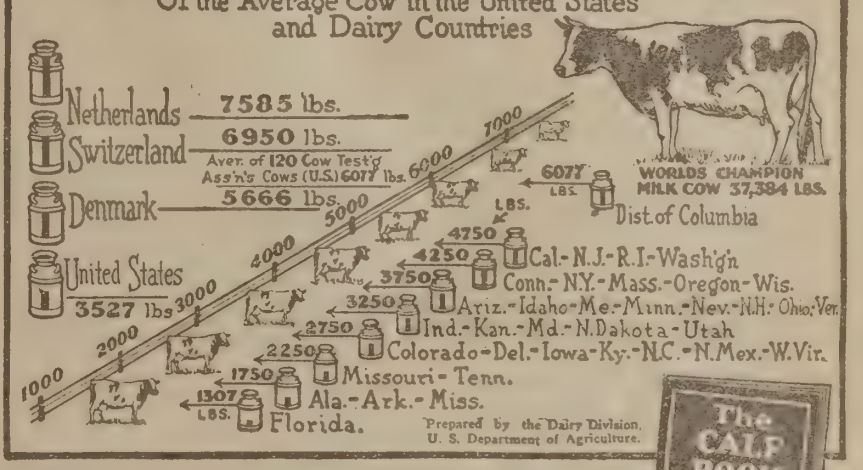


BUHL SANITARY DAIRY SUPPLIES

Buhl Cans Last Longest

MILK and cream shippers know from actual use that Buhl cans outlast all others. They stand up under the hardest daily knocks. They're made of heavy, quality tin plate in the largest, the most complete and the most efficient milk can factory in the world.

Buhl cans are smooth and easy to keep clean. That is another big reason for their popularity. With a Buhl can there are no dried particles sticking in the corners.



Order now, when stocks are complete and before the early summer rush begins. Write for folder showing complete line of Buhl Sanitary Dairy Supplies.

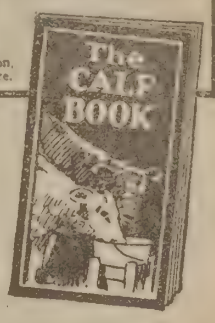
PRODUCTION of MILK
Of the Average Cow in the United States and Dairy Countries

Prepared by the Dairy Division, U. S. Department of Agriculture.



Not More Cows—But Better Cows

Compare the average yearly milk production in the United States, of 3,527 lbs. per cow, with that of other countries shown above. You will see at a glance that one of the greatest means of increasing dairy profits is in obtaining better cows.

The cheapest and best way of getting better cows is to raise them. Use a good bull, keep the best calves from your best cows and raise them on De Laval skim-milk, which is a splendid feed when properly fed. In this way you can improve your herd at very little cost.

A De Laval Separator is valued chiefly because it separates cream—a cash crop—better, quicker, cheaper and without waste. But of almost equal importance is the skim-milk it gives, which will replace your present cows with better cows; or as Pren Moore of the University of Idaho says, "when fed to laying hens will bring you as much money as the original butter-fat;" while it is without equal for growing pigs.

Milk, butter, eggs, poultry and pork, the best paying crops—a De Laval helps make them possible and more profitable.

FREE! This little booklet tells you how to raise fine calves on De Laval separated skim-milk. It is simple and practical. Sent free on request to your nearest De Laval office.

DE LAVAL PACIFIC COMPANY
61 Beale Street San Francisco

The original cream separator. Over 2,500,000 in daily use; about as many as all the rest combined. Has won 1,091 grand and first prizes at every important exposition. Skims cleaner, turns easier and lasts longer than any other. The world's standard. Pays for itself. Sold on easy terms. See your De Laval Agent or write for information.

Sooner or later you will use a
De Laval
Cream Separator and Milker

POULTRY AND RABBITS

Care of Pullets

If Raised for Breeding Purposes

By GEORGE R. SHOUP, Poultryman, Western Washington Experiment Station.

If pullets are to be used as breeders they must never be forced to lay past their powers of recuperation. Some flocks, notably those produced from the males from low-producing mothers, can not hold even a 60 per cent lay for any length of time.

In districts where trapnesting is practiced sufficiently to supply high dam record males there is little trouble of this kind, but chicks from dfstricts were trapnesting is not popular have generally inherited a much shorter cycle of lay, although the chicks are ofte nfully up to the standards in vigors and the mortality in the brooder quite low.

It is a lamentable fact that the lower the rate of productivity the greater is the fertility of the eggs and the vigor of the chick. But a flock of pullets may have every indication of health and vigor and have ancestors with laying records of only 100 eggs back of them. These birds can rarely be made to show a profit in the year's run. They make excellent breeders from the hatching man's standpoint, and many a flock is lauded to the skies because of the fertility of the eggs, but they often fail to produce. Had their owners used high-record males on these vigorous dams at least 50 per cent of the pullets might be expected to inherit the egg-laying propensity of their grandmothers on the male side, and the flock should show a handsome profit.

Manifestly the problem is how to prevent the pullet of great egg-laying inheritance on both sides from laying herself to death or ruining her constitution to such an extent that she is unfit for a breeder the second year. This is a very grave problem and we do not claim to have thoroughly solved it, but the following suggestions have been practiced on the station flocks and have resulted in reasonably fertile eggs and vigorous chicks.

Never Overstimulate.

Never allow the production to run over 65 per cent and try and hold it down to 60. Never use condiments, such as pepper, mustard or so-called tonics. The only medicine which has ever benefited a chicken internally is a physic, and epsom salts costs only 10 or 15 cents a pound. Use only 12 hours of lighting if morning light alone is used, and 14 hours if evening light is used.

The amount of protein concentrate is an important factor in the feed. We believe that the dry mash compound of the various ground mill feeds with the concentrates added should be so proportioned that the concentrates, such as fish meal, beef scraps, soy bean meal and oil meal, do not comprise more than one-tenth part of the total bulk of the mash. These concentrates are the most difficult part of the ration for the chicken to digest and are a frequent cause of indigestion.

The soy bean meal should be a bright yellow color, not brown, thus indicating that it has been properly processed, and should be almost odorless, indicating no mold. The fish meal should be light and fluffy and free from pulverized particles, indicating that the fish offal was fresh and not decomposed. It is quite possible to show a pure fish meal product in a pulverized state, but it impossible to show the meat tissue and fluffy consistency if the fish were decomposed. The beef scraps should be free of horn, hoof, hide and wool and contain very little bone.

Whenever any of the mash ingredients have caked in the sacks it is advisable not to use them for poultry. This caking indicates moisture and has probably caused the feed to mold. Mold is like yeast in that it will spread through your entire mash mixture if one of the ingredients is moldy. Every poultryman should take great pains to see that the mash, whether bought prepared or mixed at home, is made from clean, wholesome products only.

Pullets intended to be used as breeders the second year should have a liberal supply of clabbered skimmed milk or buttermilk every day. This is the most digestible form of animal food for poultry and its benefit for a prospective breeder can hardly be overestimated.

The last and most necessary ingredient in the diet where artificial light is used to promote winter egg laying is the green food supply.

Lack Hatching Power

By W. D. BUCHANAN, Poultry Extension Specialist, Washington State College.

Why do so many chicks die in the shell? The question is being asked more frequently than ever. The last winter has been long and rather severe. The birds have been housed more than usual. Green food has been scarcer and so the birds are not in such fine condition.

Last year we had a mild winter. The birds were allowed to lay and were even coaxed to lay. When the hatching season came they were not layed out, but were laying eggs that lacked hatching power. The cause was different, but the condition was the same. The chickens were not in the pink of condition. Too many eggs failed to hatch.

The sooner the poultrymen realize that they must guard the vigor of their flock as carefully as they would guard their most valued treasures, the better off they will be. The hens must not be forced for eggs and they must be allowed to run out of doors, even if the weather is bad. They will not lay as many eggs, but they will lay eggs with a kick. It is better to get one egg that will hatch a good healthy chick than to get two eggs, one of which fails to hatch and the other hatches a chick which is no good.

Why do eggs hatch better in this state than they do in Iowa or Indiana? Because in those states the winter is still longer and harder than it is here. The birds are housed more and they have less green feed. Our big asset is our mild winters and our abundance of green feed, but it is an asset that we must use. We must not take advantage of it to get more eggs, but to get more vigor, and we must plan for the unusual weather and the possible shortness of green stuff. The birds should be educated to eat alfalfa leaves and blossoms, preferably soaked in tepid water. When kale does not winter the alfalfa should be supplemented with mangles or beets. The main thing is to be ready for an emergency and to use the out of doors.

Hares or Rabbits?

What's a hare, and what's a rabbit? Many confuse them.

In the first place, the hare never burrows. The young are born on the surface soil, generally by twos and more rarely even by fours or sixes at a litter. Their eyes are open from the first. A hare a week old can almost care for itself.

The rabbit litters in a burrow, dug by its own or previous maternal care, and from its own body plucks fur to line the nest and cover the young. They are blind, naked and helpless at birth, and their eyes may not open for 12 days. Litters include from six to 12. Only the wild cottontail, usually, is likely to nest in tall, tufted grass.

The mature hare is longer of ear and of body than the rabbit, and has more noticeably developed hind limbs.

Thus the Belgian hare, so-called, falls categorically into the rabbit group, along with the Flemish, Blue, New Zealand Red, the Giants and many others. So, also, do the Lops, the Himalayans and the Dutch. All these will burrow if allowed to do so. The Belgian hare, however, while retaining its true rabbit policies, has been bred to the hare type—body long and slim, ears and hind legs long, a racy breed essenitally.

William found a pocketbook but the string jerked it back

It looked like a happy discovery as it lay there on the sidewalk—until the discoverer reached to pick it up. Then the hidden string jerked it away. All William got was disappointment.

That's the way a good many people have found it to be with the comfort and cheer they thought they had secured in tea and coffee. When they came to depend on it—there was a hidden string, and nothing left but disappointment.

The drug, caffeine, in tea and coffee, is a nerve stimulant. Constant stimulation of the nerves often produces rebellion that takes the form of sleeplessness, headaches, irritability, high blood pressure. That's the string to tea and coffee.

Postum, that wholesome and delightful cereal beverage, is completely satisfying and there's no harmful quality whatsoever, to jerk away the comfort which you find in this splendid table drink. Any member of the family may enjoy Postum with any meal—and there will be no after-regrets.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes. Sold by grocers.

ORCHARD AND GARDEN

Questions Answered

By O. M. MORRIS, Head of Horticulture, Washington State Colelge.

What shall I do for my Royal Ann cherry tree, 5 years old and in a sunny place? It is split open on the south side and the bark has rotted. Sap ran out last year. I cleaned sore and filled with cement, but it bursted off and is worse than ever. MRS. G. B.
Stevenson, Wash.

There is little that you can do to your Royal Anne cherry tree except to carve out the rotted wood and refill with cement. If you will drive a few nails part way into the wood in the cavity, this will make a tying hold for your cement when it is used to fill the base.

After carving it out, however, it would be a good plan for you to paint the cavity with some disinfectant like corrosive sublimate solution of water, made by dissolving one tablet in about four or five pints of water. Lime sulphur can be used for this same purpose, but is less commonly used for it.

It is very difficult to bind up the wood of a young tree in that form. If your tree is old and has developed a large enough volume of solid wood to make a support, the oldest wood then can rot away without seriously affecting the vitality of the tree, but this is hardly possible with young trees. Under such conditions it is often wise to remove the tree and start a new one.

GROWING CUCUMBERS.

I have heard of raising cucumbers around a barrel filled or partly filled with manure. Can you give me any information about how this is prepared?
Palouse, Wash. MRS. A. A.

You can grow good cucumbers or almost any kind of crop by setting a barrel about half its length in the soil. Fill the barrel half or two-thirds full of manure. See that it has plenty of openings in the bottom and lower part of the sides, so that the water can pass out. Then as often as the soil conditions require pour enough water in the barrel to form a good irrigation of the soil.

Plant your cucumbers or tomato vines about 8 to 14 inches from the edge of the barrel and you will have started the fundamental requirements for a splendid crop. One of the most vivid memories of my boyhood is connected with the part I played in producing a most wonderful crop of cucumbers by this method. I did not enthuse over the cucumbers, but I do remember of having to carry water at least every other morning to fill that barrel and it seemed to me then that the barrel certainly held a great deal more water with the manure in it than it ever could have held had it been entirely empty.

PREPARING SOIL FOR A LAWN.

What is the best way to prepare soil for a good lawn? MRS. E. P. C.
Richland, Wash.

One of the best ways to prepare soil for a lawn is to plow it and then disk into the surface soil a good heavy dressing of well rotted barnyard manure, harrow and drag to a level surface and then roll down firmly.

The soil should be pulverized to a depth of six or eight inches and then given a repacking, not to make it hard, but firm so that when the ground settles, as it will with frequent watering, it will retain a uniform level and condition throughout.

CROSS-POLLENATION OF CHERRY.

I have about 30 splendid cherry trees. They are about 15 years old and are composed of Bings, Royal Annes and Lamberts. In the spring the trees are covered with blossoms, but most of them fall off after the bloom. I do not get over one-fourth of a crop. The fruit I get is of a splendid type. Could you tell me what to do for them to make the blossoms stay and get a good crop? W. F. M.
Asotin, Wash.

The trouble in your cherry orchard is that the Bings, Royal Anne and Lambert varieties are all practically self-sterile and equally intersterile. You will be forced to introduce another variety, preferably Black Republican, Tartarian or Waterhouse, and have this other variety come into blossom so that cross-pollenation can take place before your trees will fruit satisfactorily. You may top graft about one tree in 12 with one of the varieties suggested. This will hasten the production of the desired variety of flowers.

If you are in doubt about the value of the suggestion made here it will pay you to look about and find some orchard where you can secure the privilege of cutting some large branches of one of the varieties desired while these branches are in full bloom. Take a branch four or five feet long, if possible just as it opens into full blossom, set the butt end of it in a pail of water and fasten that in top of one of your trees, or do so in several trees and watch results. If it increases your crop you will have at hand, I think, a reasonable evidence as to the cause of your crop failure in the past. It will pay you to do this for three or four years until your top-grafted trees come into blossom.

CAMPBELL EARLY GRAPES.

Would grapes and cherries do any good in the Blue Creek section? Ours is not bottom land, but what they call here the first bench of the hills. Our neighbors raise peaches, plums, prunes, etc. Do you think plums would do any good for fruit and shade for poultry? MRS. C. G.
Blue Creek (Stevens county), Wash.

It is rather doubtful whether you could succeed with any varieties of grapes in your district. In all probability an early variety like the Campbell Early might give you fairly satisfactory results if planted on a south slope.

Peaches, plums and prunes should do well and the plums especially would make good plants to grow in your poultry yard. However, this plant responds well to cultivation the same as cherries and peaches. There is no reason that I could see that poultry should not be permitted to have full range under all of the fruit trees on the ordinary farm.

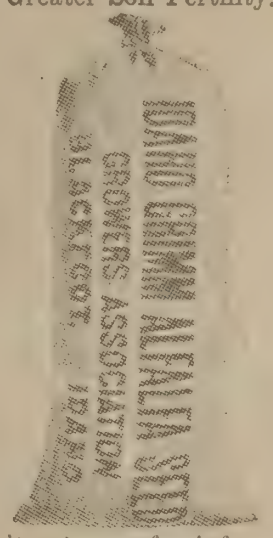
ROSES STARTED FROM SLIPS.

Will a slip taken from the peasant rose bush and set out and started bloom? If not, how do florists propagate their plants? R. L.
Davenport, Wash.

The slips taken from the peasant rose bush will blossom. All of rose bushes commonly handled in our nurseries are grown from cuttings just as this practice indicates. Some of the most tender varieties are budded or grafted upon more hardy stocks. The Manetti rose stock is most commonly used as a stock. Its blossoms are small and of little consequence, although it will produce blossoms.

Powdery Mildew in Orchards

According to D. F. Fisher of Wenatchee, plant pathologist of the United States department of agriculture, powdery mildew is becoming a serious disease in the orchards of the state of Washington. The first really bad infection of the disease was in 1915 and since then it has been more or less prevalent, though varying according to the season. Last year was a bad mildew year. The mildew is carried over the winter in the buds on the trees, but it is not practical to spray for it until the buds have swelled in the spring. However, in the winter the affected twigs can be pruned away, as the twigs carrying the mildew are readily recognizable because of their whitish appearance Mr. Fisher explains that no pains need be taken to burn or destroy these twigs, as the mildew can not be spread from them However, twigs removed in summer would be likely to contain spores, by means of which the pest might be spread. The first spray applied for mildew is when the buds are in the pink. Lime-sulphur spray at the rate of 1 to 50 is applied at this time as an extra spray. Again when the calyx spray is applied the lime-sulphur is added. Another extra application of the mildew spray is made half way between the calyx spray and the first cover spray, and the lime-sulphur is added to the first cover spray. These four sprays for mildew should be sufficient and only in cases where the infection is very bad is there need of more applications. In order to avoid the danger of spray burn it is not safe to apply the lime-sulphur later than the time of the first cover spray.



Of all spraying operations none need to be any more thorough than the mildew spray, for the foliage and the tree as a whole needs to be covered thoroughly. Both the under sides of the leaves as well as the upper sides must be covered if a thorough job is to be done.

ECONOMY

THRESHING TIME is payday on the farm. After your long season of hard work, nothing less than full payment is going to satisfy you. Whether your crop be grain, rice, peas, beans, peanuts or any other that requires threshing, you can collect full pay—***the whole crop***—by using a Case Thresher. That is their first and greatest economy.

In addition to threshing clean and saving the whole crop, a Case Thresher on your farm enables you to thresh at the right time to get your crops to market when prices are highest or hauling conditions are best. That, sometimes, is a very real economy.

Then there's power economy. The working parts of a Case Thresher are few, simple and well balanced, making for light weight, easy running and saving in power.

Next comes their durability. Most of the Case Steel-Built Threshers sold eighteen years ago are still in use. The machines we build today are even more durable.

Due to their simplicity and dependability, Case Threshers work from morning to night, requiring few adjustments and little attention. Their light weight and rugged strength make it easy to move them from one location to another. Their efficient work keeps teams and pitchers steadily busy. There are seven sizes—20x28, 22x36, 26x46, 28x50, 32x54, 36x58 and 40x62, and there is a Case Tractor to operate each size.

The Case dealer will tell you all about Case Threshers, Kerosene Tractors, Silo Fillers, Baling Presses, Road Machines, Grand Detour Plows, and Disk Harrows. See him, or address a post card to

GRAND DETOUR PLOWS 1837

The U. S. Grain Growers, Inc.

Fifty-four Per Cent Control Convention for Old Liners

As stated in a previous article in THE FARCER, the first annual convention of the United States Grain Growers, Inc., held in Chicago week before last, resulted in a wide split between the purely cooperative element and the so-called farmers' elevator element. Just how serious this split is may be better understood when it is known that a minority of the delegates at the convention, representing 18,941 farmer members of the United States Grain Growers, or 46 per cent of the total membership, were completely routed in their attempt to maintain the principle of cooperation in the organization, while the delegates representing 22,844 growers, or 54 per cent of the total membership, controlled the convention and succeeded in keeping the control of the United States Grain Growers in the hands of the so-called old-line farmers' elevators.

"It is simply a question of whether the United States Grain Growers are to market their grain cooperatively, or whether they are to sell through farmers' elevators by way of speculative channels, as some 5000 of these elevators have been doing for years," says the Chicago representative of THE FARMER.

The defeated minority, in favor of genuine cooperative marketing of grain, represented the producers of the states of Illinois, Oklahoma, North Dakota, Kansas and Michigan. Following the convention they met at the offices of the American Farm Bureau federation to discuss the problems that had arisen. In a signed statement, they declared, that if it were possible they would continue to market their grain through the sales agency of the United States Grain Growers, Inc., but that if it were not found possible to restore the United States to democratic control of its membership, then these states would take immediate steps to create other agencies for the marketing of their grain.

Liabilities Exceed Assets.

From figures submitted by Treasurer William G. Eckhardt it appeared that the liabilities of the United States Grain Growers exceed the assets of the concern by about $118,000. Total liabilities are given as about $336,000. The greater part of the liabilities is made up of loans from state farm bureaus and state associations. The largest of these single loans is $157,000, due the Illinois Agricultural association, which association was represented in the minority at the recent convention.

A significant situation developed at the convention when President Leonard of the Illinois association called President C. H. Gustafson of the United States Grain Growers and leaders of the majority in control to a private conference and declared to him that if caucus rule continued to dominate the convention he would wire the field men of the United States Growers in Illinois to stop organization work. He threatened that the Illinois Agricultural association would demand payment of its $157,000 loan to the United States Grain Growers, and request that the United States Growers be thrown into receivership if payment were not made. Whether or not this threat is likely to be carried out, following the ruthless defeat of the minority in the convention in the election of the board of directors and the transaction of other business is problematic at this writing.

Farm Bureau Talks Plainly.

The Grain Grower, the official organ of the United States Grain Growers, Inc., in its published report of the convention, makes no mention of the gravity of the split that developed, but would leave the impression to the uninformed reader that the convention was a constructive and harmonious one. On the other hand, the American Farm Bureau Federation Weekly News Letter, the mouthpiece of the American farm bureau, declares in no uncertain terms that the convention was a farce so far as the cooperative marketing of grain was concerned. The published statement of the American Farm Bureau federation suggests strongly that the farm bureau may disinherit the United States Grain Growers, Inc., unless it live up to the original ideas of the bureau in bringing about improved marketing conditions.

"During the two days of the convention the delegates heard little about the cooperative marketing of grain," says the official statement of the American Farm Bureau federation. "Most of the time was consumed by jockeying back and forth to secure control of the convention for one side or the other. The idea of sinking personal ambitions and the advantages of leadership in a magnanimous effort to render a real economic service to the cooperative marketing of grain did not engage the attention of the leaders. It was a political convention, and not a business meeting.

"The farm bureau has pledged itself to see that its members get improved methods of marketing. The farm bureau has sponsored, fostered and financed the United States Grain Growers, Inc., in an effort to secure harmony in the various grain marketing organizations. Whatever happens to the United States Grain Growers, the farm bureau will continue its earnest efforts to secure a more efficient system for marketing grain."

It will be remembered that the United States Grain Growers, Inc., is the organization formed upon the recommendation of the committee of 17, appointed some two years ago by President Howard of the American Farm Bureau federation, at the request of grain growers throughout the United States. The present controversy is apparently, in no small degree, due to the attempt to mix pooling, or pure cooperation, and direct sales through so-called farmers' elevators, or speculative marketing.

As stated in a previous article, it is not a far stretch of the imagination to see the strong minority of 46 per cent of the membership of the United States Grain Growers taking steps that will lead them to affiliate with the 100 per cent pooling organizations that are now being coordinated into recently formed American Grain Growers, Associated.

WILLIAM S. FIX, Washougal, Wash.—I can't farm without The Washington Farmer.

Clover Seed

Growing Yakima Valley Industry

The clover seed industry in the Yakima valley promises to be one of the leading cash crops in the near future, according to J. E. Currey, the state seed inspector, who is working under the department of agriculture in the state house at Olympia. Last year there were from six to seven carloads of red clover seed shipped out of the valley and some of it sold as high as 16 cents a pound. This, of course, was seed that tested high, but for inferior quality seed the dealers paid as low as 3 cents a pound.

Green Foxtail.

"The main trouble with the seed industry at the present time," said Mr. Currey, "is the fact that a number of unscrupulous growers allowed weed seed to get a start in their fields. They were able to get good prices for almost any kind of seed and they did not pay much attention to getting the weeds out. As a result, many new seedings have been planted with inferior seed and it is now almost impossible to obtain clean seed.

"Although dodder is getting a start in some localities of Washington, it has not yet attained a degree where it is doing much harm. The worst weed pest we have in the Yakima valley is the green foxtail. Clover fields that have any of this weed scattered through should be carefully rogued over, and all patches where the weed shows up should be mowed close to the ground and burned. This weed and hay growth can be fed if it is carried from the patch without dropping any seed and if fed immediately.

"If the growers would put out a good quality product that could be depended on the local seed houses would handle every pound of seed that could be produced. There is a big demand for clover seed, but no dealer can afford to buy without some assurance that he is getting pure seed. In fact, it is difficult to obtain seed that will comply with the state seed law.

Running Water Makes Your House a *Home*

Kitchen work is made much easier, laundry work takes much less time. Your wife has more time to give to the children and to sewing and recreation.

Have a bathroom—it's a joy and a benefit. Have *hot* running water—it's cheap. You owe yourself a Milwaukee Air Power Water System to make chores in the barn and around the house easier and more quickly done. You owe yourself *and your family* a Milwaukee System *in the house*—to make life worth while. The water is always *direct from the well.*

McQUAY-NORRIS PISTON RINGS

Get All the Power You Pay For

You can't get all the power that's in the gasoline you buy if your piston rings are worn and leaky. McQuay-Norris Piston Rings stop this waste. They increase power—save gas and oil and reduce carbon trouble. Whatever the make or model of passenger car, truck, tractor or stationary engine, you will find the McQuay-Norris line is complete for every need. Through the addition of McQuay-Norris Wainwright Pistons and Piston Pins to the McQuay-Norris Piston Ring line, you can now secure for your gas engines complete McQuay-Norris-made Pistons, Piston Pins and Piston Ring equipment.

McQUAY-NORRIS WAINWRIGHT PISTONS & PINS

Send for Free Booklet—a valuable explanation of the relation of piston rings to gas engine operation. Address Dept. BD.

McQuay-Norris Manufacturing Co., St. Louis, U. S. A.

Canadian Factory: McQuay-Norris Mfg. Co., of Canada, Ltd., Toronto.

LEAK-PROOF — an exclusive two-piece design, preventing loss of gas and compression. Gives equal pressure at all points on cylinder walls. For all piston grooves except top, which should have Supercyl. Each ring packed in a parchment container. Price per ring—

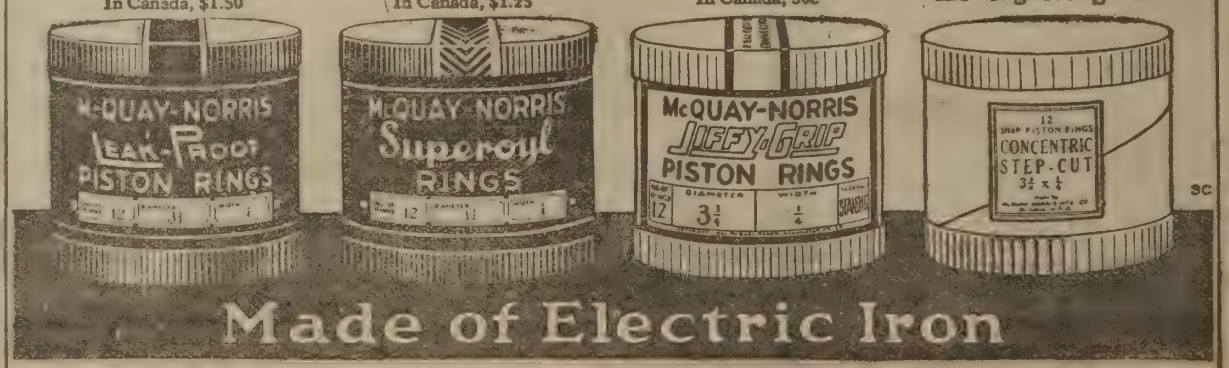
$1.25

In Canada, $1.50

Supercyl — Keeps lubricating oil out of combustion chamber. Collects excess oil on each down stroke of piston and empties on each up stroke, which ordinary grooved rings cannot do. Each ring packed in a parchment container. Price per ring—

$1.00

In Canada, $1.25



JIFFY-GRIP — a one-piece ring. Non-butting joint which can be fitted closer than ordinary step cut—velvet finish—quick seating. "Seats in a jiffy." To keep them clean and free from rust, each ring is packed in an individual glassine envelope. Price per ring—

50c

In Canada, 50c

Snap Rings—of the highest grade. Raised above the average by McQuay-Norris manufacturing methods. Their use insures all the satisfaction possible for you to get from a plain snap ring. They are packed twelve rings to the carton and rolled in waxed paper,

And Snap Rings of the highest grade

Made of Electric Iron

"30-10"

(Continued from page six.)

and expend them where the children are. "Where the children are" is synonymous with costs of education. To measure these costs some clearly defined and easily understood unit should be chosen. Experience has indicated two: The actual days' attendance of the children and the number of teachers.

The attendance unit is an excellent measure of costs in city schools, but fails in comparing rural schools with each other and in comparing rural schools with city schools. For example: One rural school may have but 25 pupils, while another has but five. It is manifestly unfair to consider the first as costing five times as much as the second. The actual maintenance charges of the two schools are practically equal.

The teacher unit is excellent from the standpoint of cost accounting, for 67 per cent of current school expenditures is charged to teachers' salaries. It follows that a large part of the money should be distributed according to the main item in the expenditures. The teacher as a unit of cost is fair also where the attendance breaks down, namely, in the comparison of rural schools and in the comparison of rural and city schools. The two units, actual days' attendance, and number of teachers, supplement each other. Investigations have shown that the fairest combination of the two is to apportion one-half of the funds on attendance and one-half on the number of teachers, the method chosen is "30-10."

Experience has shown that there are a few special districts in every state that can not be helped materially by any system of apportionment applicable to the entire state. The only remedy is to put into a special equalization fund a definite amount of money to be distributed to the especially needy districts by an administrator with discretionary powers. The "30-10" measure makes provision that an amount not to exceed $60,000 shall be apportioned by the state superintendent of public instruction acting under the direction of the state board of education.

In further defining the actual days' attendance of children the fact that high school instruction costs over one and one-half times as much as elementary school instruction for the same number of pupils is taken into consideration by counting high school attendance as one and one-half times actual attendance. Extra costs in parental schools and schools for defectives are placed at the ratio of three and five to one. Night schools, part-time schools and kindergartens are recognized as integral parts of our public school system. Provision is also made that districts should not lose their attendance when schools are closed on account of circumstances beyond the control of the board of education, such as epidemics, etc.

All bonuses for items not representing actual school costs are discontinued. This includes attendance in private schools and extra attendance given to consolidated districts. The apportionment of both state and county moneys is put on the same basis.

All school districts are required to hold 160 days of school. No district of any class may draw state and county money for more than 190 days.

Under this method of apportionment each district would receive from the state fund about 12 1-4 cents for every day each pupil is in school and $530 for each teacher employed. The apportionment from the county fund would be approximately one-third of that from the state fund.

Seed Potatoes

There are three methods of selecting seed potatoes, namely, gathering up the small potatoes which have gone through the sorter when harvesting, taking those left over in the cellar after the best cooking tubers have been picked out, and selecting the hills in the field before the crop is dug. The latter method is by far the best and is recommended by O. W. Eckman of Mount Vernon, who gave a paper on the subject at the Western Washington Horticultural convention.

"It is a very good plan to grow your own seed if you are prepared for it and can take care of a small seed plot which is separate from the main field. In any case the patch should be rogued in order to get out the poor hills and the ones that are not true to type. In rogueing out a patch one should always take the tubers out with the plant since the digger will get them and there will be no result of rogueing.

"In my mind there is no such a term as the seed 'running out.' The condition is caused merely by the use of poor seed. It is the grower himself that has 'run out' and not the seed. He has been using seed from poor hills and expecting to produce good yields.

"When putting potatoes into storage," continued Mr. Eckman, be sure to store only good tubers; those that have no breaks in the skins. A bruised potato will rot much quicker than one that is sound and the whole lot should be sorted over to insure perfect storage. Keep the temperature of the cellar from 34 to 40 degrees, since warmer storage will lower the vitality of the seed.

"In treating seed with corrosive sublimate, I find it best to use 5 ounces of poison to 35 gallons of water instead of the usual mixture of 4 ounces to 30 gallons. The stronger mix covers the sack better and is more effective. The corrosive sublimate will mix much better if it is dissolved in hot water instead of cold water. After seven dippings the mixture should be renewed. A wooden vessel should be used for the solution. Although corrosive sublimate is a deadly poison it is harmless to the skin and there is no danger from handling the sacks.

"One should never delay treating seed until planting time as there are apt to be some sprouts which will be injured.

"The seed pieces should be cut so that there is enough plant food present to start the new plant. Cut the seed so that there will be two eyes to the piece. A blocky appearance is best, getting them as near two ounces as possible. Many prefer to use lime or other powder to dry the cut surfaces, but I have found that by spreading the whole pile out on a dry floor they will soon coat over and dry. After the seed have been cut, they should not be kept longer than 48 hours, as they have a tendency to generate heat if kept too long in a pile."

Twenty years of active duty

still shooting hard and straight

CROWS, hawks, and other devastating pests never get away from this man.

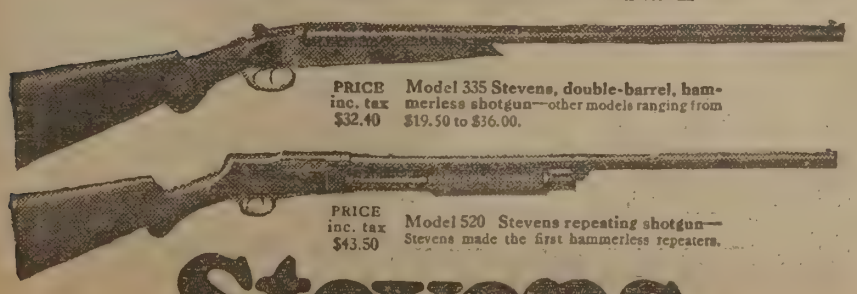
For twenty years he has been using the same Stevens shotgun, and for twenty years his trusty old gun has continued to throw the same hard-hitting, even pattern.

Through the years, the endurance and accuracy of Stevens guns have remained unsurpassed. When you pay more than the price of a Stevens gun, you don't get more gun quality — you are paying for frills and ornaments.

It's easy to prove the accuracy of a Stevens

Here's the test for a full choke: on a piece of paper draw a circle 30 inches in diameter; measure off 40 yards and fire into it. Your Stevens will throw an even pattern of 70% of the pellets into that circle.

A Stevens modified choke will throw an even pattern of 50%. And a Stevens cylinder bore will throw an even pattern of 40%. Try it. Only a perfectly bored gun will meet this test.



Stevens manufactures a complete line of small bore rifles and shotguns of every description. Ask at your dealer's or write for the interesting catalog describing in detail the complete Stevens line. Address:

Cheap Power Is No Longer a Problem

In the OilPull the problem of producing cheapest power for farm work has been solved, by combining the Four Vital Factors. These are: (1) Lowest Fuel Cost. (2) Lowest Upkeep Expense. (3) Longest Life. (4) Reasonable Price.

As proof, the OilPull has the following records to its credit: (1) Holder of all National Fuel Economy records for 10 years. (2) Investigations show upkeep cost of only 50% of the Government's national average. (3) OilPulls average 10 years and more of service. (4) Reasonable Price.

In no other tractor will you find these four combined.

OIL PULL TRACTOR
"The Cheapest Farm Power"

OilPull success is due to many things, but of chief importance is TRIPLE HEAT CONTROL—a perfected system of oil burning that positively gets the power out of cheap kerosene. Controls motor temperatures. Never too hot. Never too cold.

Makes possible our unqualified guarantee to burn kerosene successfully under all conditions and at all loads up to its full rated brake horse power.

See the Advance-Rumely dealer for demonstration. Mail coupon for copy of our special booklet on TRIPLE HEAT CONTROL.

Advance-Rumely Thresher Co., Inc.
Pocatello, Idaho Portland, Ore. Spokane, Wash.

Serviced from 30 Branch Offices and Warehouses. The Advance-Rumely line includes kerosene tractors, steam engines, grain and rice threshers, alfalfa and clover hullers, husker shredders and farm trucks

Triple Heat Control

A gallon of cheap kerosene contains more actual power than a gallon of expensive gasoline. The problem is to get the hidden power *out* of cheap kerosene.

Triple Heat Control is a scientific system of oil burning that positively *DOES get the power out.*

Too Many Scrubs

Gradual Improvement Must Come

More than 80 per cent of all the farmers in the United States are directly engaged in the raising, feeding and care of dairy cattle. The report of the United States census for 1920 shows that there are over 31,000,000 cattle classed as dairy cattle, or, to be exact, 31,386,378. Of this number 916,602, or less than 3 per cent, are pure-breds, and the rest, or 30,469,776, are either grades or scrubs.

The purebred cattle are divided among the five dairy breeds as follows: 528,261 Holstein-Friesians, 231,834 Jerseys, 79,445 Guernseys, 30,494 Ayrshires and 8130 Brown Swiss. This leaves about 38,000, which are divided among the less common breeds. Of the total number of purebred cattle 71 per cent, or 724,116, are cows and 21 per cent, or 192,486, are bulls.

The grade and scrub dairy cattle total 30,469,776 head, and represent over 97 per cent of all our dairy cattle. Of these grades there are 29,903,923, or 98.1 per cent of them, cows, and 565,853, or 1.9 per cent bulls. As the total number of dairy bulls is only 758,339, we find that the above half million and more of these inferior grade bulls represent 75 per cent of the total number of bulls, while the total number of the purebred bulls is only 25 per cent of all the males. Among the female dairy cattle the purebred cows fare even worse. Here the grand total number of cows reach 30,628,039, of which 29,903,923, or 97.6 per cent, are grades or scrubs, and only 724,116, or 2.4 per cent are purebred.

From a study of the above figures it is evident that there is a wonderful opportunity for improvement in the type of dairy cattle which go to make up the great majority of the foundation animals of our great dairy industry. There is surely plenty of room, and in fact a great need, for a larger and faster development of the purebred dairy cattle business. This is particularly so as it refers to the increased use of purebred bulls in the grade herds.

It is, of course, impractical to do away with our grade cows, provided they are of the desirable kind. We should however, take more active steps in eliminating from our herds all inferior grades and all of the scrub cattle, both males and females. The grade bull must also go, because with his continued use there will never be made the progress in dairy herd improvement and in efficiency in the production of milk which it is possible to make, and which should be made.

It is possible, through cooperation and concerted action, to accomplish the desired results along lines of dairy cattle improvement and to rid the country of the grade and scrub bull.

The increased efficiency in milk production of our future dairy cows would add millions of dollars to the incomes of dairy farmers.

Cowlitz County Fair

The Cowlitz county fair is one of the first of the smaller fairs to announce its dates for the coming season, which are September 27 to 30, at Woodland. The county commissioners appointed C. C. Ruckles of Kalama, Mrs. P. A. Parker of Castle Rock, Mrs. Adkin of Kelso and Mrs. R. W. Mills of Woodland to assist in preparing premiums and exhibits. Superintendent Gardner of the county schools has charge of that department and Miss Nora Kelly, county club agent, and Miss Bess Lawler, county nurse, of the boys and girls' club work.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

POULTRY—Baby Chicks (Continued) 174

YESTERLAID EGG RANCH, KENT, WASH.—Dear Sir: Am more satisfied every day with the chicks received the 17th. They are certainly husky and while Feb. chicks may be supposed to lack vigor, it is certain yours lack nothing. May I increase my order 150 chicks to be delivered with my March 22d order. Irving Kunz, Hoquiam, Wash. Dear Sir: The chicks I got from you the 20th of May are fine. Please let me know your prices for 1922, as I am in the market again for a good order. A. E. Rackow, Hollister, Idaho. Dear Sir: Please let me know the date my 1000 chicks will be delivered. The chicks you sent me in 1921 are just wonderful. Got 70 per cent lay all winter. H. H. Coffey, Chehalis, Wash. We hatch 12,000 of these kind of White Leghorn chicks every 5 days from our own eggs. All sold out until May 1st. Orders for hatching eggs can be filled any time. Largest, most modern and up-to-date trap nest poultry ranch in the world. Yesterlaid Egg Ranch, Kent, Wash.

The GAUNT GRAY WOLF

By DILLON WALLACE

Copyright, 1914, by Fleming H. Revell Co. Published by special arrangement with the International Feature Service, Inc.

SYNOPSIS.

Shad' Trowbridge, a New England lad of about 20 years, sails on a mail boat to Labrador, where he plans to spend a few weeks of summer hunting and fishing in the wilderness. Upon his arrival he meets two experienced fishermen and trappers, Dick Blake and Ed Matheson, who recommend to him a young lad of 17 known as Ungava Bob, as a guide for his hunting and fishing trip inland. Desiring to lose the least time possible in securing Ungava Bob's services and starting inland for his vacation, Shad starts across the bay in his canoe in the face of a threatening storm. In the darkness his canoe is capsized and he is plunged into the icy water. As he rises to the surface a rope is thrown to him and he hears a voice shouting to make it fast. He is soon drawn aboard a little sailboat which, unknown to him had approached at the moment of his great need.

"I'm sure I owe my life to you," he said to the lad piloting the sailboat. "It was lucky for me you saw me."

"'Tweren't luck, sir," said the lad. "'Twere Providence. 'Twere the Lord who were takin' care of you."

To his surprise, Shad discovers that his new friend, the lad with the sailboat, is none other than Ungava Bob. Together, they make their way to Bob's home, where Shad enjoys the hospitality of the northland while they consider ways and means of making inland excursions. Shad decides to remain a month or more and make the first leg of a long winter of trapping planned by Bob, returning to the settlement in time to sail back home before college opens. To lay in additional supplies for the trip they cross the bay to the Hudson's Bay trading post, where Shad meets with other friends of Ungava Bob and his parents, including Mr. and Mrs. Black, whose daughter Bessie and Bob are great friends.

They leave for the wild trapping grounds and Shad is so delighted with the wilderness that he decides to remain with Bob on the trails all winter. The other members of the party start back home, leaving the two boys alone to start their long winter of adventure. But they are not alone! Hardly has the boat carried their friends around the bend of the river before Bob and Shad see two Indians watching them from the shadows of the forest trees.

CHAPTER VI.

Old Friends.

"Sishetakushin and Mookoomahn!" exclaimed Bob.

The moment they were recognized the two Indians strode forward, laughing, and grasped Bob's hand in a manner that left no doubt of their pleasure at meeting him, while both voiced their feeling in a torrent of tumultuous words.

They were tall, lithe, sinewey fellows, clad in buckskin shirt, tight-fitting buckskin leggings and moccasins. They wore no hats, but a band of buckskin, decorated in colors, passing around the forehead, held in subjection the long black hair, which fell nearly to their shoulders. In the hollow of his left arm each carried a long, muzzle-loading trade gun, and Mookoomahn, the younger of the two, also carried at his back a bow and a quiver of arrows.

"These be th' Indians I were tellin' you of," Bob finally introduced, when and opportunity offered. "Shake hands with un, Shad. This un is Sishetakushin, an' this un is his son, Mookoomahn. I've been tellin' they you're my friend."

In their attitude toward Shad they were dignified and reserved. Neither could speak English, and Bob, who had a fair mastery of the Indian tongue, interpreted.

"We are glad to meet the friend of White Brother of the Snow," said Sishetakushin, acting as spokesman. "We welcome him to our country. White Brother of the Snow tells us he will remain for many moons. He will visit our lodge with the White Brother of the Snow and eat our meat. He will be welcome."

"I thank you," responded Shad. "White Brother of the Snow has told me how kind you were to him when he was in trouble, and it is a great pleasure to meet you. I will certainly visit your lodge with him and eat your meat."

The ceermony of introduction completed, Bob renewed the fire and brewed a kettle of tea for his visitors. They drank it greedily, and at a temperature that would have scalded a white man's throat.

"They's wonderful fond o' tea, and tobacco, too," explained Bob, "an' they only gets un when they goes t' Ungava onct or twict a year."

Upon Bob's suggestion that, should they meet Indians, it would prove an acceptable gift, Shad had purchased at the post and brought with him a bountiful supply of black plug tobacco, such as the natives used, and with this hint from Bob he gave each of the Indians a half-dozen plugs. The swarthy faces and black eyes of the visitors lighted with pleasure, and from that moment much of the reserve that they had hitherto maintained toward him vanished.

"The friend of White Brother of the Snow is generous," said Sishetakushin, in accepting the tobacco. "For four moons we have had nothing to smoke but dried leaves and the bark of the red willow."

Each Indian carried at his belt a pipe, the bowl fashioned from soft, red pipe stone, the stem a hollow spruce stock. Squatting upon their haunches before the fire, they at once filled their pipes with tobacco, lighted them with coals from the fire and blissfully puffed in silence for several minutes.

"How are Manikawan and her mother?" Bob presently inquired.

"The mother is well, but the maiden has grieved long because White Brother of the Snow never returns," answered Sishetakushin. "She watches for him when the Spirit of the Wind speaks in the treetops. She watches when the moon is bright and the shadow spirits are abroad. She watches when the evil spirits of the storm are raging in fury through the forest. She watches always, and is sad. Young men have sought her hand to wife, but she has denied them. White Brother of the Snow will return. He will come again to our lodge, and the maiden will be joyful."

Shad was unable to understand a word of this, but Bob's face told him plainly that something not altogether pleasant to the lad had been said.

"I can not go now," said Bob, speaking in the Indian tongue. "We must build

A warning was shouted that they must not attempt to land.

our lodges and lay our trails. Winter will soon be upon us and we must have the lodges built before the Frost Spirit freezes the earth."

"Sishetakushin's lodge is always open to White Brother of the Snow. It is pitched upon the shores of the Great Lake, two days' journey to the northward. The trail is plain. It lies through two lakes and along water running to the Great Lake. The maiden is waiting for White Brother of the Snow. He was made one of our people. He is welcome."

The Indians had risen to go, and Bob presented them with a package of tea as a parting gift, which they accepted.

"White Brother of the Snow will come to our lodge soon and bring with him his friend," said Sishetakushin, in accepting the tea, and he and Mookoomahn, like shadows disappeared into the forest.

"Injuns be queer folk, but they were good friends t' me when I were needin' friends," said Bob, when the Indians were gone.

CHAPTER VII.

Where the Evil Spirits Dwell.

From the river tilt, as they called it, where their camp was pitched, the Big Hill trail led to the northwest for 15 miles, then 15 miles to the westward, where it took a sharp turn to the northward, in which direction it continued for nearly 30 miles, then again swung to the westward for 15 miles, where it terminated on the shores of a small lake. This was the trail previously hunted by Bob.

Douglas Campbell had visited the Big Hill trail the preceding winter, but had not remained to hunt, and it had therefore been unoccupied during the winter. For the season at hand it had been transferred to Dick Blake, while Dick's own trail, farther down the river, was to remain untenanted, and the animals given an opportunity to increase. Directly below the Big Hill trail and adjoining it was Bill Campbell's trail.

Bob had been informed by Mountaineer Indians who camped during a portion of each summer near the Eskimo Bay post, that by following a stream flowing into the river a short distance above the river tilt of the Big Hill trail and taking a west-northwesterly direction, he would find a series of lakes running almost parallel with the river and lying between the river and the Big Hill trail.

Tradition said that this stream and series of lakes had at one time been an Indian portage route around the Great Falls of the Grand river, but for many years it had been generally avoided by Indians because of its proximity to the falls, which were supposed to be the abode of evil spirits, a superstition doubtless arising form the fact that Indian canoes may have been caught in the current above the falls and carried to destruction below; and because of the impression and awful aspect of the falls themselves, whose thunderous roar may be hear for many miles, echoing through the solitudes.

From the fact that this region had but rarely been traversed, and had certainly not been hunted by Indians for many generations, and that the animals within the considerable territory which it embraced had therefore been permitted to increase unidsturbed by man, Bob argued that it must of necessity prove a rich trapping ground for the first who ventured to invade it. It was here, then, that he purposed establishing his first trapping trail.

The first step to be taken was to make a survey of the region, and with a quantity of steel traps, a limited supply of provisions, and Shad's light tent, the two young adventurers set forward in the canoe upon their scouting journey within the hour after Sishetakushin and Mookoomahn had left them.

A long portage and the ascent of a stream for several miles carried them that evening to the first of the series of lakes, where Bob's trained eye soon discovered unquestionable signs of an abundance of fur-bearing animals, sustaining his hope that the ground would be found virgin and profitable territory.

Their camp was pitched by the lake shore. At their back lay the dark forest, before them spread the shimmering lake, and to the westward a high hill lifted its barren peak of weather-beaten, storm-scoured rocks.

The atmosphere became cool as evening approached, and when supper was disposed of the fire was renewed, and, weary with their day's work, they reclined before its genial blaze to watch the sun go down in an effulgence of glory and color.

Neither spoke until the colors were well nigh faded, and the first stars twinkled faintly above.

"The most glorious sunset I ever beheld," remarked Shad finally, breaking the silence.

"'Twere fine!" admitted Bob. "We sees un often in here, this time o' year. They makes me think o' what the Bible says th' holy place in th' temple was t' be like—'A veil o' blue an' purple an' scarlet.' I'm wonderin', now, if th' Lord weren't makin' these sunsets just t' show what th' holy place be like, an' t' keep us from forgettin' un. I'm wonderin' if 'tisn't a bit o' th' holy place in th' temple o' Heaven, th' Lard's showin' us in them sunsets."

"I don't know," said Shad; "I don't remember it. I must confess I never read my Bible very much."

"I'll read un to you from my Bible when day comes," promised Bob.

Presently the aurora borealis flashed up upon the sky with the effect of a thousand powerful searchlights, the long fingers of light rising from the northern horizon to the zenith and flashing from east to west in a maze of every-changing color—now white—now red—now yellow. It was a scene not only beautiful but weird and awe-inspiring.

"I'm thinkin', now, o' th' northern lights," remarked Bob, when they had watched them for some time, "that they's flashes o' light from heaven. I'm thinkin' th' Lard send un t' give us promise o' th' glories we'll have when we dies."

"That is a cheerful thought, at least," admitted Shad.

"Yes, 'tis cheerin'. Leastways, they always cheers me when I see un," declared Bob.

"Whenever I see them after this," said Shad, "I shall remember your suggestion—that they are the reflected glory of heaven, sent to inspire the dwellers upon earth."

As they arose to retire to their tent the dead silence of the wilderness was startled by the uncanny cry of a loon. Bob stood for a moment and listened. Then, turning to the tent, he remarked:

"'Tis a bad sign, when a loon laughs at night like that!"

"In what way?" asked Shad.

"'Tis said t' be a warnin' o' danger an' trouble."

In a series of portages from lake to lake they passed the next day through six lakes of varying size, caching traps now and again at convenient points for future use.

All the afternoon a low, rumbling sound was to be heard. Time and again they halted to listen. It was a changeless, sullen, muffled roar. Finally, when they reached the sixth lake, later in the afternoon, their curiosity got the better of them and they climbed a barren eminence to investigate. As they neared the summit the roar increased in volume and when they reached the top and looked to the southward they beheld a cloud of vapor.

"'Tis th' Great Falls o' th' Injuns!" exclaimed Bob.

"Where th' evil spirits dwell."

Around them lay a rugged scene of subarctic grandeur. To the eastward the country was dotted with a network of small lakes similar to those through which they had been traveling, while to the northward a much larger lake appeared. The shores of these lakes supported a forest of black spruce, but every rise of ground was destitute of other growth than the gray caribou lichen which everywhere carpets the Labrador forest.

"There's a grand chance t' lay th' trails," said Bob. "We'll be makin' our trails along th' s'uth'ard lakes an' up t' that big lake, an' Ed's among th' lakes t' th' n'uth'ard."

"I'd like to see those falls," suggested Shad. "Can't we take the morning off to visit them?"

"An' you wants," agreed Bob. "We'll be buildin' a tilt down where th' canoe is, an' another on th' first lake, an' I'm thinkin' another on th' big lake above."

Accordingly the following morning, leaving their camp pitched and their canoe on the lake shore, they turned southward upon an exploring expedition. Their tramp carried them across a series of ridges and bogs and finally into a forest. With every step the roar increased, and at length they could plainly feel the earth tremble beneath their feet.

Suddenly they emerged from the forest to behold a scene of wild and sublime grandeur. They stood at the very brink of a mighty chasm. From far above them the river rushed down, a stupendous torrent of foam-crested billows and swirling whirlpools, impatient to make its leap into the depths at their feet where it was presently to be swallowed up in a bank of mist, which shimmered beneath the two adventurers like a giant opal lighted by all the colors of the rainbow. Below the rainbow-colored mist the river again appeared, rushing in fearful power past beetling, frowning cliffs, which directly hid it from view. The very rocks upon which they stood trembled, and a reverberating roar rose from the canyon at their feet, so loud that conversation was well-nigh impossible.

For half an hour they stood enthralled by the scene, then they turned up the river, walking along its bank.

"'Tis an awful place down there," remarked Bob. "I'm not wonderin', now, th' Injuns things 'tis possessed by evil spirits."

"It is the most sublime scene I ever beheld," declared Shad. "One glimpse of it is worth all the trouble we've had in getting here."

The river gradually widened, but always with a strong current, even above the heavy white rapids; until some five miles above the falls it expanded into a large island-dotted lake. At the extreme end of this lake the old Indian portage trail was discovered, and following it the explorers late in the day reached their camp.

The following weeks were devoted to the erection of tilts—small log cabins to be used in winter as shelter. One was established well up the shores of the large lake expansion above the falls, another upon the shores of the lake from which they had made their excursion to the falls, and still another upon the first lake above the river tilt of the Big Hill trail, while

Floors and Walls

By MRS. C. W. SHUMAKER.

It is a laudable desire and purpose of every homemaker to have the interior of all rooms finished and furnished as attractively as taste dictates and means will permit, yet at the same time express our wishes in a permanent, substantial way.

As one of the means to this end I find it more practical and desirable to use rugs instead of carpets in all rooms except kitchen and bathroom, where linoleum or paint are used to protect the floors, with rugs and runners where there is much wear. Every one has discovered what a task it is to lift, clean and replace a carpet, so it is only taken up about twice a year, which does not insure a very clean floor covering at the best. Then, too, it is difficult to keep the corners free of dust if the room is carpeted, while with rugs one can use the dust mop over the entire surface when the rugs are taken out for a frequent beating and airing. In bedrooms use only small rugs on floors that are varnished, stained or painted, while in living and dining rooms large rugs in the center, with smaller ones at doors or other spots of travel make an attractive floor. In the kitchen I prefer runners of cocoa matting—like that used in public buildings. It is porous so the dust and dirt sifts right through, does not soil easily and lies perfectly flat as long as it is used. Should a rug get the habit of curling at the end or corner sew a strip of pasteboard on the under side and it will keep straight.

Light Colored Walls.

Finish kitchen and bathroom woodwork with white paint. While it soils, it is easily washed and does not show dust as quickly as a darker color, while it at the same time makes the room lighter. Also finish all bedroom woodwork in white, making them more dainty and attractive. Other rooms may be finished as the owner's taste dictates.

Paint the kitchen walls white or put on a washable paper. It is much nicer and means less work than the old-fashioned whitewash and makes the room look much nicer. The same wall covering could be used in the bathroom to advantage. Tint the walls of all other rooms. It does not fade like wall paper, is more sanitary and lasting, is less trouble and expense to put on and harmonizes better with the other furnishings. In bedrooms use delicate tints with white ceilings. In living and dining rooms tans and browns, with cream or white ceilings are pretty and form a good background for pictures and furniture.

Not Too Many Pictures.

The next step is to curb one's desire to have too many pictures, knicknacks and ornaments scattered about. They are dust catchers and give any room a cluttered look—as if they were trying to crowd out the human inhabitants, a few good pictures on the walls, with photos tucked away in the drawer, but handy to be brought out when desired, are much to be preferred to an indiscriminate display of scenery, photos, animals, etc., in a variety of frames more or less gaudy. I never gave picture framing very serious thought until I found a store that really does artistic work in that line. They choose a molding that has some tint or color found in the picture, narrow and plain, so that it adds to rather than detracts from the scene it surrounds—the one blending in and harmonizing with the other.

Curtains at the windows should be of washable material, of course. I like marquisette myself, as it is substantial, can be plain hemstitched or trimmed with a narrow edge and always looks so dainty and trim whe nlaundered. The less drapery at windows and about the room the easier it is to be kept clean and more wholesome and sanitary the home.

Field Pea Seed

Field peas have been raised to a very limited extent in Thurston county, but A. S. Caton of Olympia finds that they will yield as high as two tons to the acre under favorable weather conditions. Last year he had four acres of Blue Bell field peas which were certified by the state seed inspector during the growing season. After the crop had been harvested and threshed Mr. Caton ran the whole lot over a screen and hand-picked the seed in order to get out all foreign matter and imperfect seed.

"The process of hand picking or screening the seed is what takes so much of the time," said Mr. Caton, "and as far as money is concerned, I never hope to get paid for the time it takes to clean them thoroughly. I have been roguing the fields for the last eight years and have at last succeeded in getting all the odd varieties weeded out. The Blue Bell pea has a white blossom and for that reason it is an easy matter to pick out all others, which have purple or yellow blooms. I have at last obtained a seed which will produce 100 per cent pure peas. They have sold for as high as $200 a ton.

"The Blue Bell makes a fine table pea if taken when it is tender. We like to go over the vines at the side of the patch and get a few of the best pods for eating and find that they are very delicious. The dry peas are excellent for pea soup and we keep out the ones that are split in threshing for this purpose."

Mr. Caton explained that he was not trying to promote the raising of field peas for the Puget sound district, but it was more for the purpose of improving his soil that he kept raising them. Last year he had more pea straw than he could feed to his cow and two horses, so he bought up two extra cows to feed through the winter. The returns come partly from the sale of the cows in the spring and partly from the increased value of the straw when in the form of manure. In this way he is able to increase the fertility of his soil both with the growing crop and with the manure.

Next year Mr. Caton contemplates seeding seven acres of field peas on land which has been in orchard.

Veterinary

(Continued from page eight.)

calomel, five grains. This is sufficient for a 100-pound animal. Increase or decrease in accordance with the size of the animals to be treated. It should be well mixed with the feed and two doses given—one each succeeding day. You could repeat in a week or 10 days if necessary.

Ear Trouble.—My dog has had ear trouble for many months and it seems that there is some matter forming in his ear. He scratches it until it bleeds. He also has a swelling between his toes on his front foot, which breaks and heals up, but comes back again in two or three weeks? What shall I do for him?

Woodinville, Wash. N. F.

Drop some peroxide of hydrogen into the dog's ear or ears. Follow this by a small quantity of methyl alcohol. If you are not of age, get your father to get this and do this for you. Immediately after, you fill the ear with boracic acid and put on a bandage made by sewing together two rather long pieces of cloth which will cover the ears well and keep the animal from flopping the ears until they get sore. This can be removed after a little while. Give this treatment daily for some time.

For the trouble between the toes you probably need to wash the wound out with peroxide of hydrogen and when thoroughly foaming treat it with a little tincture of iodine.

Caked Udder.—What should be done when a heifer's bag badly cakes before she freshens? MRS. C. F. K.

Odessa, Wash.

Wash the udder morning and evening with hot salt water and massage carefully. Lessen the amount of grain given the heifer until after she calves.

Milk.—I have a mare 13 years old, bred about five months ago, and she has some milk now. What is the cause of this? Is there any remedy? J. R. A.

Winthrop, Wash.

It sometimes occurs that pregnant animals come into milk before they give birth to their young when the milk is necessary for the nourishment of the young. I do not know any way to stop it.

Bloat.—I lost a 3-year-old cow, fresh about three months and in good health apparently until the night she died. She ate well when put in her stall that evening. When I went to milk her an hour later the cow was lying on her back bloated so badly that two of her legs stuck up in the air. The bloating continued until it extended to her neck and shoulders and by the next morning she had more than doubled her life size. Could anything have been done to save her? MRS. C. T. J.

Pasco, Wash.

I have seen many cases of straight bloat from indigestion. I think the cow should have been tapped, so that the gas might have escaped and you possibly might have saved her. The best thing to tap a cow with, of course, is a trocar in canula, which means a solid, round knife, and the canula left in the animal for the gas to escape through. The place to tap the animal is on the left side a hand's spread below the back bone and half way between the hip and the last rib. After the animal has been tapped, one ounce of creolin in an ounce of water should be given and an hour or two later a pound and a half of epsom salts in three quarts of water.

Ulcer on Eyelid.—I have a horse which has a bad eye. It appears that the inside of the lower lid is partly gone. There is matter running out occasionally. Is it catching to other horses? A. C. R.

Edwall, Wash.

From your description one might possibly make a diagnosis that the animal is suffering from an ulcer on the inside of the eyelid. It is not possible to tell whether this is catching to other horses, although I would be of the opinion that it is not. Possibly you might get very good results by dropping into the eye 2 per cent solution of argyrol in water. Do this three or four times daily. It is generally best to put the drops into the outside angle of the eyelid and allow the medicine to run down over the eye by simply pulling the lower eyelid slightly down.

DOSCH DUSTS stick

That's why growers are dusting to get more profit from peas and other crops

Being twice as fine as flour particles, Dosch Dusts penetrate out-of-the-way places on foliage and crop and then, with the aid of a special sticker material, they stick like glue.

They destroy the diseases and insects that hurt your crops. Dosch Dusts are chemically correct. The various combinations for practically every kind of crop and enemy are the result of years of investigation, research and experience. We are specialists in the control of your profit-destroyers.

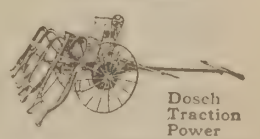
You Can Dust Quickly and Easily

The need for crop-protection sometimes arises quickly. Often there is but a limited time during which treatment should be given. Here again dusting wins, for more acreage can be dusted in a given time with one-fifth the usual labor of other methods.

There are no heavy rigs to get mired, no water to haul, no intricate machinery. Dosch Dusting Machinery is light, simple in construction, and designed to meet actual field conditions. Soggy ground is no handicap to dusting.

Dusting Costs Less

In spite of the advantages of dusting, it actually costs less than other methods. Ease of application, economy of labor and less expensive machinery bring the costs of fungicide and insecticide applications to their lowest possible point.



Dosch Dusts are recommended for the control of Aphis on Peas, on Sweet Peas and for other insects and also for fungous diseases on various crops.

Writers, scientists, and growers have found dusting to be more effective, less costly and much easier.

See the nearest dealer who sells Dosch Dusts and Dusting Machinery, or write us for his name and address.

DOSCH DUSTS

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Dear Mrs. Barland: I want to express my appreciation of the Family Circle. We think a great deal of THE FARMER and consider the Family Circle by far the best of the letter clubs in any of the magazines we have ever read.

I have a dear little girl and I enjoy the ideas and experiences on bringing up children. Keep on writing about the children.

We are new farmers, having started the venture a year ago. We have our first heifer calf, which we are raising, and I am sure many of the sisters have had experience raising calves and I would like to benefit by their experience.

Our calf is six weeks old, gets about three gallons of separated milk a day in three feeds, all the alfalfa hay she will eat and a few whole oats, but she doesn't seem to thrive or grow as she should.

I have tried numbers of the recipes with success and I can not express how much the helpful letters have smoothed the rough places.

I also want to add three cheers for Mrs. Barland for making the "help one another club" the interesting corner it is.

MRS. PAUL H.

If Mrs. A. B. of Salt Lake will take equal parts of pine tar and unsalted butter it will cure her hands. Be sure it is pine tar. MRS. C.

Moscow, Idaho.

I have just read Mrs. A. B.'s request for a simple home remedy for eczema. Take unsalted butter and work in sulphur until bright yellow. Apply to parts affected. Keep hands out of water as much as possible. MRS. H. CARAWAY.

Coeur d'Alene, Idaho.

Dear Mrs. Barland: Please tell me how to make soap out of cracklings and meat rinds and such things. The soap recipes I have call for a certain number of pounds of lard or grease. Some make soap out of cracklings and I would like to know how.

Please tell me how to set color in goods and how to shrink goods.

In making cream puffs, should they be made without soda, baking powder or salt? I made some and put in a teaspoon of soda and they were green in the center and did not rise at all. Please explain this to me.

A READER OF THE CIRCLE.

Dear Reader: Why didn't you give name and address? It makes it easier for me to help when all of you do.

When soap is made out of cracklings you must use enough to equal the amount of grease named in the recipe. It is impossible to tell you how much to use as that will depend on how much fat is left in the cracklings. I think one would have to experiment and add till the grease and lye were soap.

Before washing your goods, soak in a strong solution of salt water for an hour or two. To shrink goods put them in a tub of very hot water, to make sure that they are shrunken as much as possible, dry the goods and soak again in hot water. Cold water will not make a good job of shrinking.

The eggs in the cream puffs are supposed to cause them to rise. Should you add baking powder or soda you will spoil the delicateness of them. You should follow directions carefully in making them and the recipe which appeared a few weeks ago is fine, only use it according to the correction which was given later, namely, use but one-half cup of butter instead of one cup.

ALICE W. BARLAND.

Dear Mrs. Barland: In return for the many helps I get in the Family Circle I am going to add my mite.

During the winter months the cream is hard to churn and even when temperature is right, about 62 degrees, it will sometimes get thick and then thin and foam to double its size and seem to be separating, but doesn't.

I have found a method which works so well that I will tell you about it, as it may help others. I take a perfectly sterilized flour sack which has been sewed strongly with the machine and pour the cream into it. It may run through at first; pour it back and place a dish under to catch the cream and hang it up and allow to remain over night. You will be surprised to see how quickly it will separate into butter in the morning and most of the bitterness will be gone. I wasted several nice big churns full of cream, as some of it was too bitter to cook with, before I hit upon this plan.

We live on a small ranch of 35 acres and are making a 3-year residence on a 640-acre homestead. This is our second year and I have a mile walk between the two ranches, so I have plenty to do and am never lonesome, though neighbors are not close. I help with much of the outside work in summer, raising a large garden and a good many chickens. I try to get my sewing done during the winter months, together with some crocheting and reading a few good books. At present I am making quilts. I have only one child, a little girl of 5 years.

Like others, I use flour sacks for many things and have been able to get along without buying bed spreads or sheets during this period while they have been so high. I find that flour sacks answer well for poor people.

I get many useful helps from the Circle and your good advice, Mrs. Barland.

MRS. A. F. R.

Oregon.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

A few days ago an organization of parents discussed the question of how long the school lunch period should be.

Dr. Copeland.

When I taught school in the country teacher and pupils had a gay time during the lunch hour. We used to sit around the big box stove, telling stories and cracking jokes. Then when everybody's hunger was satisfied we adjourned to the skating and sliding pond and had a snowball battle or played "pom-pom-pull-away."

But country children have a lot of fun that city children know nothing about. It works the other way, too—city children have advantages denied their country cousins.

One of my professional colleagues says the modern school child "lives too fast and too much." He gets up early, does his chores, hurries through his cleanup and dressing, and takes his breakfast on the run.

The same hurry characterizes the lunch hour, and it seems as if the child is panting for breath half the time.

What about heart and digestion? Can the growing child prosper under such pressure?

I always feel uncomfortable when I see young people hurrying their meals, running to get to school or business, and suffering from fatigue much of the time. An older person endures a life of this sort with less serious effect upon his health. Life is a good deal like a mass of concrete. Until it "sets" it is soft and malleable. When it hardens it becomes like flint.

Children should be watched. Their wonderful energy must be controlled and properly directed. They need regular meals and well-chosen food. They should not play or work too hard.

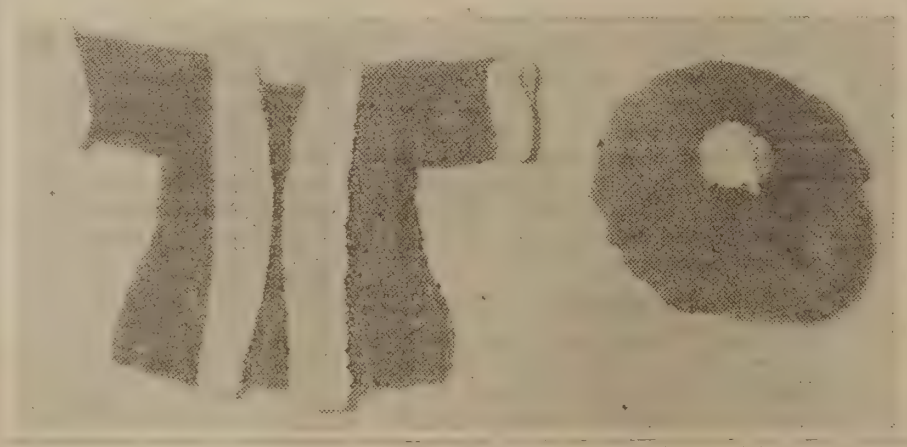
The matter of the school lunch is important. The child needs real food—not "all-day suckers," pickles or sodawater. He should take time to eat his lunch deliberately. Otherwise he will suffer from indigestion, constipation and malnutrition.

A child who bolts his food will suffer exactly as does a grown person who practices this bad habit. Haste makes waste, and hurry is deadly to health.

There is no greater social crime than lack of punctuality, but to be obsessed with the fear of being late and spending a life-time hurrying—this is the way to hurry the undertaker.

Give yourself enough leisure for your meals, and add years to your life.

To Eradicate Ants



One method: Where the colony lives in the ground or any other place where they can be somewhat confined; use carbon bisulphide. Carbon bisulphide is a liquid that turns to gas, heavier than air when exposed to the air. Two tablespoonfuls of it should be sufficient to destroy a large ant colony. Pour it into the opening of the colony and cover the opening with earth or other covering and the ants will soon suffocate.

Second method: Take about three grains (by weight as bought from the druggist) of tartar emetic. Mix thoroughly with four tablespoonfuls of syrup. Smear the mixture on wood and place about the ant runs or habitations. They will eat it or take it to their dens for the others to eat. It acts as a slow poison and is effective if the ants can be coaxed to eat it. It is only slightly poisonous in such quantities to human beings and animals, but should be handled cautiously.

Simple Gift for a Little Girl

By JEANETTE BELL.

One can not please a small girl more than by giving her something new for her doll. The knitted tam and tuxedo sweater to match are the miniature of her own in every detail, made of the same yarn, or it may be made of any leftovers one may have about the house, providing the colors are attractive. One of the mistakes one is apt to make when working for a doll is to use any old color which is handy. The first consideration is to have the color pleasing. Quality is entirely overshadowed by color. The model was of old rose with white trimmings, but many other colors and combinations could be used. The size should be measured on the doll. Use bone sock needles, or for a larger doll, fine bone knitting needles for the sweater. Allow 5 sts to the inch, for the model size, cast on 32 sts, or any number divisible by 8,

1st row: k plain.

2d row: * k 4, p 4, repeat *, for this row, then repeat for the next 3 rows, making k over k, and p over p, then shift the stitches to form the block, make 3 rows of blocks, 12 rows in all, then k plain for 24 rows, or to the underarm.

Next row: * cast on 3 sts, k across, repeat *, until you have the required length of sleeves, then k across straight, until you have the length to the back of the neck.

Next row: k to 3 sts before the center, bind off 6 sts, k across, slip the first set of sts onto a knitting pin, and k across the one sleeve and shoulder, k straight for one inch, then increase 1 st on each turn at the front side and k straight at sleeve side until you have completed the sleeve, then bind off as you increased, 3 sts on each row, then k both sides straight to the blocks, then repeat the border and bind off. Slip the sts from knitting pin to needle, and repeat for the opposite side. Sew up the seams.

For the collar of white cast on 8 sts, k plain for the length required. It is good judgment not to bind off until you have sewed the collar to the sweater, as it takes up around the neck.

For the cuffs, cast on 6 sts, k plain for the length required, bind off, sew together and sew to edge of sleeve.

For the tam, measure the size of the head, use a set of sock needles, cast on the required sts to fit, onto 3 needles, knit plain for 1 inch deep for a small doll, 1 1-2 inches for a larger doll, forming the band.

Next row: * k 1, increase 1, repeat *, for this row.

Next row: k plain.

Next row: * k 2, increase 1, repeat *.

Next row: k plain for 3 rows (this should be large enough, if not, then increase every 4th st, then k plain for 3 rows).

Next row: Divide your sts into 7 equal parts, * k 2 together k across to next division, repeat *, 6 times.

Next row: k plain, for 2 rows, then decrease as before, 1 st for each division, and continue in this manner, until you have but 7 sts, bind off.

For the pompon, cut a piece of cardboard and over this wind the white yarn, cut through and tie, sew over the opening at the top.

There's Magic, in

Red Cross Ball Blue

A hundred years ago, the magic, dazzling whiteness it gives to the coarsest as well as most delicate fabrics would have caused its user to be hailed as a witch. To-day she is the envy of her neighbors, at much less labor to herself. Makes clothes beautiful.

"Where do you live in the city—close in?" "Fairly so—35 minutes on foot, 15 by motor car, 25 by street car and 45 by telephone."—Kansas City Star.

She Had Hers Parked.

A young woman reports that she was traveling on a train recently when a girl, evidently on her first trip, entered and occupied the other half of her seat. The conductor came through calling for tickets and after some embarrassed fumbling the girl handled hers over.

A few minutes later a train boy came down the aisle behind her crying "Chewing gum."

"Mercy!" said the girl to her seat companion, "do we have to give up our chewing gum, too?"—Boston Transcript.

Some Speed.

Rastus from Boston was trying to impress his southern cousin with the superior speed of northern trains.

"When dat ole Montreal express goes to hummin', Mose," he asservated solemnly, "de telegraph posts looks like slats on a chicken fence."

"Humpf!" sniffed Mose. "When de Southern express steps out fo' Noo Orleans, it nacherally makes de mileposts look closer'n strings on a banjo."

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3316. Girl's Dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires four yards of 40-inch material. Price 10 cents.

3914. Girl's Dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires four yards of 32-inch material. Price 10 cents.

3926. Misses' Dress. Cut in three sizes: 16, 18 and 20 years. To make the dress for an 18 year size requires four yards of 44-inch material. The width at the foot is about 2 1-8 yards. Price 10 cents.

3304-3294-3759. Lady's Costume. Bolero 3304 and vest 3294 are cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42; extra large, 44-46 inches bust measure. The bolero requires three yards of 30-inch material. The vest requires 1 5-8 yards of 36-inch material. Skirt 3759 cut in six sizes: 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 2 1-2 yards of 54-inch material for a medium size. The width of the skirt at the foot is 2 5-8 yards. Three separates patterns, 10 cents for each pattern.

3392-3727. A Stylish Gown. Waist 3392 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 3727 cut in six sizes, 24, 26, 28, 30, 32 and 34 inches waist measure. The width of the skirt at the foot is 2 1-4 yards. To make this model for a medium size will require 6 1-2 yards of 32-inch material for waist with long sleeves and for the tunic, and 3 1-4 yards for the skirt. Two separate patterns, 10 cents for each pattern.

3613. Girl's Dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires 1 3-4 yards of 36-inch material. Price 10 cents.

3922. Child's Romper. Cut in four sizes: 1, 2, 3, and 4 years. A 2-year size will require 2 1-8 yards of 36-inch material. Price 10 cents.

3502. Lady's House Dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 6 3-4 yards of 36-inch material. The width of the skirt at the foot with plaits extended is about 2 1-8 yards. Price 10 cents.

3692. Lady's Apron. Cut in four sizes: Small, medium, large and extra large. A medium size requires 3 3-4 yards of 36-inch material. Price 10 cents.

3646. Girl's Dress. Cut in four sizes: 4, 6, 8, and 10 years. An 8-year size requires 3 1-4 yards of 27-inch material. Price 10 cents.

3915. Girl's Bath Robe. Cut in four sizes: 6, 8, 10 and 12 years. It requires 3 1-8 yards of 32 inch material for a 10-year size. Price 10 cents.

JELL-O for children! Children know what pleases them and they enjoy pretty desserts that taste good just as much as the grown-ups do.

It is a real boon to a busy mother to find a dessert that her children like and ask for and which she knows is good for them. That is why Jell-O is such a great family dish,—they all like it.

JELL-O

America's Most Famous Dessert

The American Offices and Factory of the Genesee Pure Food Company are at Le Roy, New York, in the famous Genesee Valley Country.

The Offices and Factory of The Genesee Pure Food Company of Canada, Ltd., are at Bridgeburg, Ontario, on the Niagara River.

GENERAL ADVERTISING.

THE CAUSE OF WHITE DIARRHEA

White Diarrhea is caused by the bacillus Bacterium Pullorum transmitted through the yolk. There is scarcely a hatch without some infected chicks. The germs multiply very rapidly and one infected chick may infect the entire brood. The germs can be killed by the use of preventives. Intestinal Antiseptics to kill the germs should be given as soon as the chicks are out of the shell. It is much easier to prevent than it is to cure.

HOW TO PREVENT WHITE DIARRHEA

Dear Sir: I have raised poultry for years and have lost my share of little chicks from White Diarrhea. Finally I learned of Walker's Walko Remedy for this disease, so sent for two 50c packages to the Walker Remedy Co., Dept 546, Waterloo, Iowa. I raised over 500 chicks and never lost a single one from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor—they develop quicker and feather earlier. I have found this company thoroughly reliable and always get the remedy by return mail. Mrs. L. L. Tam, Burnetts Creek, Ind.

DON'T WAIT

Don't wait until White Diarrhea gets half or two-thirds your chicks. Don't let it get started. Be prepared. Write today. Let us prove to you that Walko will prevent White Diarrhea. Send 50c for box on our guarantee—money back if not satisfied. **Walker Remedy Co., Dept 546, Waterloo, Iowa.**

TREES AND SHRUBS

LOOK AT THE GOOD FARM BARGAINS THAT ARE OFFERED ON THE FARMERS' "WANT AD" PAGE THIS WEEK.

High Points in News of the Week

Except for certain industrial relations in the United States, last week was one of seeming great advance in the cause of peace.

In this country the United States senate completed ratification of the seven treaties submitted to it by President Harding, following the conference at Washington on the limitation of armaments. Having previously ratified the so-called four-power treaty, providing for the peaceable settlement of problems that may arise on the Pacific ocean between the United States, Great Britain, France and Japan, the senate ratified all other treaties with comparatively little opposition. The treaty declaring a "10-year naval holiday," with a great reduction in naval armaments, was adopted by a vote of 74 to 1, Senator France of Maryland casting the only negative vote. The treaty placing limitations upon the use of submarines and poison gases in international warfare was passed unanimously by a vote of 72 to nothing. The Far Eastern treaty, looking to the guarantee of the integrity of China, was ratified by 66 to nothing.

The other outstanding peace accomplishment of the week was the signing of a pact between North Ireland, South Ireland and the imperial government of Great Britain. Winston Spencer Churchill, imperial secretary for the colonies of Great Britain, declared that the treaty was the most important one in the history of his country. It provides for the establishment and maintenance of permanent peace in Ireland, with the leaders of all factions and that the British government cooperate in every way in their power to restore peaceful conditions in the unsettled area.

* * *

The industrial event that had little of the element of peace in it is the nation-wide coal strike that went into effect at midnight March 31. It is estimated that approximately 600,000 coal miners have quit, closing about 6000 out of the 7500 mines that have been in operation recently. Mines in 20 states are affected by the strike, including, in the Pacific northwest, the state of Washington and British Columbia, where a total of about 5000 miners are striking. Some of the mines, it is believed, will operate on a limited scale with nonunion workmen.

It is apparent that both the mine owners and the mine workers are determined to carry on the strike until one side or the other is exhausted. The strike is over the demands of the miners for a continuation of the war-time agreement as to working conditions and wages, which the mine owners have refused to grant.

There is claimed to be a surplus of about 10,000,000 tons of hard coal and 65,000,000 tons of soft coal on hand in the country at the present time. This is estimated to be enough to supply the general public, the railroads and industrial plants for approximately two months.

President Harding and Secretary of Labor Davis, who have endeavored in vain to get the mine owners and the mine workers together in agreement to avoid the strike, have now taken the position that the government should take no hand in the matter unless an emergency situation arises, in which the public welfare is menaced. With the present supply of coal on hand, the government considers that no such situation exists at the present time.

* * *

An important wage hearing is in progress at the present time between the railroad owners and representatives of the engineers and firemen. Conferences are also being held with the organized conductors' and trainmen's' brotherhoods.

* * *

Senator Gooding of Idaho, chairman of the "agricultural-Paris bloc," in a published interview, announces the success of the farm bloc in its tariff activities, saying: "Every rate asked by the farm bloc will be in the bill when it is reported out of the senate finance committee. For the first time, the producers of farm products have received everything they asked and what they were entitled to receive, because their senators effected an organization which was able to go out and demand what was right." While the tariff measure is about ready to be submitted to the senate for consideration, there will undoubtedly be lengthy debates on some of its provisions, with probable changes in schedules as existing in the original draft.

* * *

Representative Moore of Virginia last week introduced a resolution in the lower house of congress, looking toward the granting of independence to the Philippine islands. The resolution provides that before independence is granted the United States secure from the other nations interested in islands or mainlands of the Pacific ocean promises that they will officially recognize the Philippines as an independent nation.

* * *

Marshal Joffre, under whose leadership the French army stopped the first advance of the German army at the River Marne in its march toward Paris in 1914, is a guest of the United States this week. He entered the United States last week at Blaine, Wash., passing through the international peace portal erected there commemorating the more than 100 years of peace without fortifications between Canada and the United States.

* * *

With the arrival last week of the last ship bearing American soldier dead from France, a total of about 45,000 bodies have been brought back to their homes. Only those remain on European soil whose relatives desired that their bodies remain where they had fallen in the service of civilization.

* * *

It is understood that President Harding is soon to issue a proclamation naming April 22 as national arbor day.

* * *

Former Emperor Charles of Austria-Hungary died last week in exile, to which he had been sent by the allies, following his recent attempt to regain the throne of either Austria or Hungary, from which he was required to step down at the conclusion of the recent war.

Protest Wheat Dockage

The Northwest Wheat Growers, Associated, the organization coordinating the cooperative associations of the four Pacific northwestern states, is leading in a campaign for a reduction in the discount rate and dockage on wheat because of the presence of smut. A series of hearings is being arranged by the organization. The present charges, which determine the discount rate on smutty wheat, are 60 cents a ton where the proportion of smut does not exceed 3 per cent, 75 cents where it does not exceed 7 per cent and $1 where it does not exceed 15 per cent. The grain growers claim that the charge should be changed to not exceed 15 cents a ton where the percentage of smut does not exceed 1-2 of 1 per cent, 30 cents a ton for smut above 1-2 of 1 per cent and under 1 1-2 per cent, 50 cents a ton where it runs from 2 to 4 per cent and 75 cents a ton for anything above 4 per cent.

OTTO KOEHLER, South Tacoma, Wash. —For my part I must say The Washington Farmer is O. K.

Farm Business and Markets Outlook

(Continued from page five.)

Prices on 92 score fresh butter on March 29 were:

Chicago, 37c; New York, 36c; Boston, 31 1-2c; Philadelphia, 36 1-2c; San Francisco exchange quotation, 33c.

The cheese market has been weak on all grades and especially so on daisies. Longhorns and square prints were nearly steady.

Prices for No. 1 American cheese on March 29 were:

CHICAGO.—Twins, 18 1-4@18 1-2c; single daisies, double daisies, 18 1-8 1-4c; longhorns, 19 1-2@20 1-2c; square prints, 21 1-2c.

POTATO STOCKS APPEAR LIBERAL.

Stocks of potatoes in the 15 leading potato states on March 1 were estimated at 90,946,000 bushels, of which 73,486,000 bushels were held by farmers and 17,460,000 bushels by local dealers. Only 31,000,000 bushels of the farm stocks will be sold, so that total stocks available for commercial channels are about 48,000,000 bushels.

The apple market is dull, with the movement into consumptive channels rather slow. Baldwins, Starks and Northern Spies are quoted at $7.50 to $8.50 per barrel and northwestern extra fancy medium to large Winesaps at $2.75 to $3.25 per box wholesale in leading eastern and middle western markets.

LATEST QUOTATIONS.

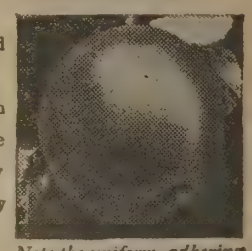
ALBATROSS BRANDS

Prevent

the "blotch" or "burn" of the spray on fruit

Observe this study in contrasts. The apple at the left was sprayed with Arsenate of Lead—a wonderfully good spray. But the user neglected to mix "Spray Spread" with it. Below is a similar apple—sprayed with the same kind of spray—but Albatross Spray Spread was mixed with the spray. Note the difference—the "lead" dried on the FIRST apple in spots or blotches. The second apple received an equal amount of protective spray—but it spread over the apple in a thin film. Appearance and marketing appeal of the apple is thus retained. The pictures tell why Government experts are so enthused over "Spray Spread"—why experienced horticulturists say it has NO equal for spreading an "arsenate of lead" spray.



Note the "blotch" or "burn" of the lead on this apple

ALBATROSS "SPRAY SPREAD"

(Calcium Caseinate Compound)

The Original and Genuine Spray Spreader

Quality Features:
1. Very finely ground—always uniform.
2. Quickly Soluble.

WRITE OUR ADVERTISERS

It will pay you to write for free booklets and information offered in the advertising columns; and when you do write, please mention THE WASHINGTON FARMER.—Adv.

Idella Bernice Johnson's papa takes 10 children to school every morning in an automobile and brings them home again at night. Idella Bernice is one of them. There are three brothers and two sisters in the Johnson home and Idella says they have much fun. They live on a farm on Whidby island, in northwestern Washington, and have horses, cows, pigs, calves, chickens, kittens and a dog named Pete. Idella was 8 years old December 20, 1921.

Vera Louise Kinsey heard that Aunt Nellie likes to get letters from the girls and boys and that is why she wrote. Vera Louise was 9 October 20, 1921. She is a fourth grade student and thinks going to school is fine. Last year she had a good teacher and she has a good one this year. Vera's home is in northwestern Washington, almost on the Canadian border line.

Brown-eyed Elsie Schilbeff, who is 7 years old, writes that her mother has been ill, but she is much better now. Elsie is a second grade pupil and lives near the schoolhouse. She has three sisters. There are two horses, a cat and some chickens at the Schilbeff home, near the Wenatchee river in central Washington. Elsie has brown hair.

When spring comes and flowers are in bloom Stella Cade will be glad. She says there are a few flowers coming up now. She went out to see one day and found an Easter lily almost in bloom. October 6, 1922, Stella will be 9 years old. She lives near the Wenatchee river in central Washington. Her little niece, Edith Laver, came to visit her. Edith is learning to walk. She likes to pet Bobby, the dog.

"We are going to move to Canada," says Vernon Albee, who now lives near Stevens lake, in Snohomish county, Washington. How can you get up in the morning and see Europe and get back right away? Get up and go to the looking glass and you will see Europe (you're up). (Aunt Nellie will be glad to get the story you spoke of, Vernon.)

There are 48 children in the room where Annie Schilbeff attends school. Teacher's name is Miss Hafterson. Annie has three sisters. One of them is a baby, 2 years old. Annie is 9. She says she has light brown hair, blue eyes and fair complexion

"I should like to join the Corner," writes Irene Cresswell from northern Spokane county, Washington. "I am 11 years old and my birthday is June 24." Leonard and Vincent are Irene's brothers. Irene and Leonard go to the same school. Here are some jokes: Dusty—I fell down hill with 10 bottles of beer and did not break one of them. Lazy Mike—How did you accomplish such a wonderful feat? Dusty—I had them inside of me. Teacher—Jane, can you tell me who succeeded Edward VI.? Jane—Mary. Teacher—Now, Lucy, who followed Mary? Lucy—(absentmindedly)—Her little lamb.

Why is a prosperous farmer like a well-fed hen? Because he has a full crop. What part of a turkey is carried by the soldiers? The drumstick. Nine-year-old Clayton Dick decided to write to the cousins and Aunt Nellie. His birthday is August 15. Clayton is a Washington boy and lives near the Columbia river, in Okanogan county.

Ruby May Schrag, 8 years old, is a new cousin in western Adams county, Washington. Her birthday is November 26. She hasn't any brother or sister. Her teacher, Miss Wallace, boards at her home. Ruby May has a dog and three little pigs.
